Quantum Measures And Spaces:

Quantum Measures and Spaces G. Kalmbach, 2013-01-22 This book has evolved from lectures and seminars of the author held at different academic institutions during the years 1983-1998. It has four parts. In the first part, orthomodular measure theory generalizing classical measure theory for the purpose of quantum mechanics is developed. Quantum structures are investigated and inner products are constructed in rich supply for measurements. This part has grown out of Hilbert space and operator theory and the quantum mechanical measurement process. In the second part, a new finite dimensional geometrical model is presented for the four basic interactions for bosons and particle series. Symmetry transformation groups such as $U(1)$, $SU(2)$, $SU(3)$ together with a new group $D(3)$ here the guides for the geometric constructions. Infinite dimensional spaces are the theme of the third part of the book. Hilbert lattices are special dimension lattices. Complete spaces, archimedean and non archimedean orthomodular spaces are studied or characterized and coordinates and dimension functions for such spaces are constructed. In the last part of the book, brief reviews are found on topics diversely spread in the literature. They are intended as reference for an interested reader which wants to know some more details concerning the material of this book. The book can be used for future research for seminars and lectures on quantum structures. It is a continuation of the author's book on orthomodular lattices.

Handbook of Measure Theory E. Pap, 2002-10-31 The main goal of this Handbook is to survey measure theory with its many different branches and its relations with other areas of mathematics. Mostly aggregating many classical branches of measure theory, the aim of the Handbook is also to cover new fields, approaches and applications which support the idea of measure in a wider sense, e.g. the ninth part of the Handbook. Although chapters are written of surveys in the various areas, they contain many special topics and challenging problems valuable for experts and rich sources of inspiration. Mathematicians from other areas as well as physicists, computer scientists, engineers and econometrists will find useful results and powerful methods for their research. The reader may find in the Handbook many close relations to other mathematical areas: real analysis, probability theory, statistics, ergodic theory, functional analysis, potential theory, topology, set theory, geometry, differential equations, optimization, variational analysis, decision making and others. The Handbook is a rich source of relevant references to articles, books and lecture notes and it contains for the reader's convenience an extensive subject and author index.

Space Law Principles and Sustainable Measures Hamid Jahankhani, Stefan Kendzierskyj, Sina Pournouri, Maria A. Pozza, 2024-09-14 This book helps to bridge the knowledge gap that currently surrounds space technology and its method of exploration and highlights much needed awareness and attention to an increase in Space Law and sustainable measures. The ever increasing usage of space based solutions by both public and commercial entities is producing congestion in the radio frequency spectrum as well as orbital slots. The inevitable commercialization of satellite technology will certainly result in a proliferation of privately owned and managed satellite spacecraft in low Earth orbits. Cyber vulnerabilities in the Air Force and the DoD frequently ignore satellite

Quantum Measurement Paul Busch, Pekka Lahti, Juha-Pekka Pellonpää, Kari Ylinen, 2016-08-23 This is a book about the Hilbert space formulation of quantum mechanics and its measurement theory It contains a synopsis of what became of the Mathematical Foundations of Quantum Mechanics since von Neumann's classic treatise with this title Fundamental non-classical features of quantum mechanics indeterminacy and incompatibility of observables unavoidable measurement disturbance entanglement nonlocality are explicated and analysed using the tools of operational quantum theory The book is divided into four parts 1 Mathematics provides a systematic exposition of the Hilbert space and operator theoretic tools and relevant measure and integration theory leading to the Naimark and Stinespring dilation theorems 2 Elements develops the basic concepts of quantum mechanics and measurement theory with a focus on the notion of approximate joint measurability 3 Realisations offers in depth studies of the fundamental observables of quantum mechanics and some of their measurement implementations and 4 Foundations discusses a selection of foundational topics quantum classical contrast Bell nonlocality measurement limitations measurement problem operational axioms from a measurement theoretic perspective The book is addressed to physicists mathematicians and philosophers of physics with an interest in the mathematical and conceptual foundations of quantum physics specifically from the perspective of measurement theory

Causality, Measurement Theory and the Differentiable Structure of Space-Time R. N. Sen, 2010-02-11

Introducing graduate students and researchers to mathematical physics this book discusses two recent developments the demonstration that causality can be defined on discrete space times and Sewell's measurement theory in which the wave packet is reduced without recourse to the observer's conscious ego nonlinearities or interaction with the rest of the universe The definition of causality on a discrete space time assumes that space time is made up of geometrical points Using Sewell's measurement theory the author concludes that the notion of geometrical points is as meaningful in quantum mechanics as it is in classical mechanics and that it is impossible to tell whether the differential calculus is a discovery or an invention Providing a mathematical discourse on the relation between theoretical and experimental physics the book gives detailed
