Developments in Telecommunications Edward Mozley Roche, Henry Bakis, 2018-12-17 Published in 1997 Developments in information technology and telecommunications are giving new meaning to the concepts of space and time In particular the concepts of local and global are starting to merge together even though they apparently represent entirely different scales One example is telework also known as telecommuting Another is the rapid growth of outsourcing These developments are based on new technologies such as multimedia rapid improvements in storage technologies and the information superhighway including the Internet The structure of the world's telecommunications industry is changing and in addition political and social autonomy is breaking down The role of the nation state is challenged as are the old avenues and levers of political power Nation states have attempted to grab functional control over the emerging infrastructure but they are ultimately unable to exert control over the flood of information surging around the world There still remains a strong middle ground between local and global dominated by multinational corporations and governments
