SEAY,2009-11-01 **How Attention Works** Stefan Van Der Stigchel,2019-03-12 How we filter out what is irrelevant so we can focus on what we need to know We are surrounded by a world rich with visual information but we pay attention to very little of it filtering out what is irrelevant so we can focus on what we think we need to know Advertisers web designers and other attention architects try hard to get our attention promoting products with videos on huge outdoor screens adding flashing banners to websites and developing computer programs with blinking icons that tempt us to click Often they succeed in distracting us from what we are supposed to be doing In *How Attention Works* Stefan Van der Stigchel explains the process of attention and what the implications are for our everyday lives The visual attention system is efficient Van der Stigchel writes because it doesn't waste energy processing every scrap of visual data it receives it gathers only relevant information We focus on one snippet of information and assume that everything else is stable and consistent with past experience that's why most people miss even the most glaring continuity errors in films If an object doesn't meet our expectations chances are we won't see it Van der Stigchel makes his case with examples from real life explaining among other things the limitations of color perception and why fire trucks shouldn't be red the importance of location security guards and radiologists for example have to know where to look the attention getting properties of faces and spiders what we can learn from someone else's eye movements why we see what we expect to see magicians take advantage of this and visual neglect and unattended information **ON IT** Jonathan Robinson,2014-04-01 This is a thumping good read Jonathan Aitken

The Mammoth Book of Time Travel SF Mike Ashley, 2013-07-04 This thought provoking collection not only takes us into the past and the future but also explores what might happen if we attempt to manipulate time to our own advantage These stories show what happens once you start to meddle with time and the paradoxes that might arise It also raises questions about whether we understand time and how we perceive it Once we move outside the present day can we ever return or do we move into an alternate world What happens if our meddling with Nature leads to time flowing backwards or slowing down or stopping all together Or if we get trapped in a constant loop from which we can never escape Is the past and future immutable or will we ever be able to escape the inevitable These are just some of the questions that are raised in these challenging exciting and sometimes amusing stories by Kage Baker Simon Clark Fritz Leiber Christopher Priest Kristine Kathryn Rusch Robert Silverberg Michael Swanwick John Varley and many others

Pediatric Neuro-Ophthalmology Michael C. Brodsky, 2010-03-23 Due to the generous representation of the afferent visual system within the brain neurological disease may disrupt vision as a presenting symptom or as a secondary effect of the disease Conversely early developmental disturbances of vision often disrupt ocular motor control systems giving rise to complex disorders such as nystagmus strabismus and torticollis The signs and symptoms of neurological disease are elusive by their very nature presenting a confounding diagnostic challenge Neurological medications and neurosurgical treatments can produce neuro

ophthalmological dysfunction that can be difficult to distinguish from disease progression. Affected patients may experience substantial delays in diagnosis and are often subjected to extensive and expensive diagnostic testing. Scientific articles pertaining to specific disorders are scattered throughout medical subspecialty journals. These children continue to fall through the cracks of our medical education system. The increasing recognition that pediatric neuro ophthalmology comprises a distinct set of diseases from those seen in adults has led to its emergence as a dedicated field of study. Since the original publication of Pediatric Neuro Ophthalmology nearly fourteen years ago, interest in the field has burgeoned. Pediatric ophthalmology and pediatric neurology subspecialty conferences often include symposia dedicated to recent advances in pediatric neuro ophthalmology. Technical advances in neuroimaging have given rise to a more integrated mechanistic classification of neuro ophthalmological disease in children. Our understanding of neurodevelopmental disorders of the visual system has expanded. Longstanding monoliths have been disassembled into component parts. Basic molecular mechanisms have taken center stage and genetic underpinnings have become definitional. Evolutionary alterations can now be observed at the level of the gene, adding a new dimension to our understanding of disease pathogenesis. New classifications now encompass clinically disparate conditions. Descriptive definitions have been supplanted by mechanistic ones, and clinical definitions superseded by genetic ones. Our concept of disease pathogenesis has been revised and in some cases overturned. Bearing witness to these remarkable advancements has compelled me to enhance and expand the first edition of Pediatric Neuro Ophthalmology into this new and revised one. In the first edition of this book, our goal was to present the clinical characteristics, diagnostic evaluation, and therapeutic options for the common neuro ophthalmologic disorders of childhood. In so doing, we designed the book to provide a narrative journey through the thought processes involved in the clinical management of these disorders. In this edition, I have retained the basic narrative format of the original book while expanding the exploration of these complex visual disorders in the context of the many new scientific advancements and discoveries that have come to light. These conditions are fun to diagnose, fascinating to understand, and gratifying to manage.
