Apocalyptic AI: Visions of Heaven in Robotics, Artificial Intelligence, and Virtual Reality Robert M. Geraci, 2010-02-05. Apocalyptic AI: the hope that we might one day upload our minds into machines or cyberspace and live forever is a surprisingly wide spread and influential idea affecting everything from the world view of online gamers to government research funding and philosophical thought. In *Apocalyptic AI*, Robert Geraci offers the first serious account of this cyber theology and the people who promote it. Drawing on interviews with roboticists and AI researchers and with devotees of the online game *Second Life* among others, Geraci illuminates the ideas of such advocates of Apocalyptic AI as Hans Moravec and Ray Kurzweil. He reveals that the rhetoric of Apocalyptic AI is strikingly similar to that of the apocalyptic traditions of Judaism and Christianity. In both systems the believer is trapped in a dualistic universe and expects a resolution in which he or she will be translated to a transcendent new world and live forever in a glorified new body. Equally important, Geraci shows how this worldview shapes our culture. Apocalyptic AI has become a powerful force in modern culture. In this superb volume he shines a light on this belief system, revealing what it is and how it is changing society.

Practicing what the Doctor Preached Susan Bales Ridgely, 2017. James Dobson is well known to the secular world as a crusader for the Christian right. But within Christian circles he is known primarily as a childrearing expert: millions of American children have been raised on his message. *Practicing What the Doctor Preached* looks at how Dobson's rigid authoritarian teachings are put into practice by actual families, often in surprisingly

The Blackwell Companion to Religion in America Philip Goff,2010-03-25 This authoritative and cutting edge companion brings together a team of leading scholars to document the rich diversity and unique viewpoints that have formed the religious history of the United States A groundbreaking new volume which represents the first sustained effort to fully explain the development of American religious history and its creation within evolving political and social frameworks Spans a wide range of traditions and movements from the Baptists and Methodists to Buddhists and Mormons Explores topics ranging from religion and the media immigration and piety though to politics and social reform Considers how American religion has influenced and been interpreted in literature and popular culture Provides insights into the historiography of religion but presents the subject as a story in motion rather than a snapshot of where the field is at a given moment *Science, Bread, and Circuses* Gregory Schrempf,2014-11-15 In *Science Bread and Circuses* Gregory Schrempf brings a folkloristic viewpoint to the topic of popular science calling attention to the persistence of folkloric form idiom and worldview within the increasingly important dimension of popular consciousness defined by the impact of science Schrempf considers specific

examples of texts in which science interpreters employ folkloric tropes myths legends epics proverbs spectacles and a variety of gestures from religious tradition to lend credibility and appeal to their messages In each essay he explores an instance of science popularization rooted in the quotidian round variations of proverb formulas in monumental measurements invocations of science heroes like saints or other inspirational figures the battle of mythos and logos in parenting and academe how the meme has become embroiled in quasi religious treatments of the problem of evil and a range of other tropes of folklore drafted to serve the exposition of science Science Bread and Circuses places the relationship of science and folklore at the very center of folkloristic inquiry by exploring a range of attempts to rephrase and thus domesticate scientific findings and claims in folklorically imbued popular forms

Destined for the Stars Catherine L. Newell, 2019-06-05 Where did humanity get the idea that outer space is a frontier waiting to be explored *Destined for the Stars* unravels the popularization of the science of space exploration in America between 1944 and 1955 arguing that the success of the US space program was due not to technological or economic superiority but was sustained by a culture that had long believed it was called by God to settle new frontiers and prepare for the inevitable end of time and God's final judgment Religious forces Newell finds were in no small way responsible for the crescendo of support for and interest in space exploration in the early 1950s well before Project Mercury the United States first human spaceflight program began in 1959 In this remarkable history Newell explores the connection between the art of Chesley Bonestell the father of modern space art whose paintings drew inspiration from depictions of the American West and the popularity of that art in Cold War America Bonestell's working partnership with science writer and rocket expert Willy Ley and Ley and Bonestell's relationship with Wernher von Braun father of both the V-2 missile and the Saturn V rocket whose millennial conviction that God wanted humankind to leave Earth and explore other planets animated his life's work Together they inspired a technological and scientific faith that awoke a deep seated belief in a sense of divine destiny to reach the heavens The origins of their quest Newell concludes had less to do with the Cold War strife commonly associated with the space race and everything to do with the religious culture that contributed to the invention of space as the final frontier

Scientists in the Classroom J. Rudolph, 2002-05-02 During the 1950s leading American scientists embarked on an unprecedented project to remake high school science education Dissatisfaction with the soft school curriculum of the time advocated by the professional education establishment and concern over the growing technological sophistication of the Soviet Union led government officials to encourage a handful of elite research scientists fresh from their World War II successes to revitalize the nation's science curricula In *Scientists in the Classroom* John L. Rudolph argues that the Cold War environment long neglected in the history of education literature is crucial to understanding both the reasons for the public acceptance of scientific authority in the field of education and the nature of the curriculum materials that were eventually produced Drawing on a wealth of previously untapped resources from government and university archives Rudolph focuses on the National Science Foundation supported

curriculum projects initiated in 1956 What the historical record reveals according to Rudolph is that these materials were designed not just to improve American science education but to advance the professional interest of the American scientific community in the postwar period as well

Existential Threats Lisa Vox, 2017-05-12 Americans have long been enthralled by visions of the apocalypse Will the world end through nuclear war environmental degradation and declining biodiversity Or perhaps through the second coming of Christ rapture of the faithful and arrival of the Antichrist a set of beliefs known as dispensationalist premillennialism These seemingly competing apocalyptic fantasies are not as dissimilar as we might think In fact Lisa Vox argues although these secular and religious visions of the end of the world developed independently they have converged to create the landscape of our current apocalyptic imagination In Existential Threats Vox assembles a wide range of media science fiction movies biblical tractates rapture fiction to develop a critical history of the apocalyptic imagination from the late 1800s to the present Apocalypticism was once solely a religious ideology Vox contends which has secularized in response to increasing technological and political threats to American safety Vox reads texts ranging from Christianity Today articles on ecology and the atomic bomb to Dr Strangelove and from Mary Shelley's The Last Man to the Left Behind series by Tim LaHaye and Jerry B Jenkins demonstrating along the way that conservative evangelicals have not been as resistant to science as popularly believed and that scientists and science writers have unwittingly reproduced evangelical eschatological themes and scenarios in their own works Existential Threats argues that American apocalypticism reflects and propagates our ongoing debates over the authority of science the place of religion uses of technology and America's evolving role in global politics
