Schroeder, B.H. Purser, 2012-12-06 1 2 J H SCHROEDER and B H PURSER 1 Introduction A symposium convened during the Vth International Coral Reef Congress in Papeete Tahiti 1985 encouraged the editors to assemble this volume of case studies by participating and especially by nonparticipating scientists An attempt was made to include case studies from various regions and geological periods carried out on various scales from regional to ultrastructural We hope to present an overall view of reef diagenesis Although the volume focuses on reef diagenesis fields also to be considered are biology paleontology and sedimentary facies distribution as they provide the context and to some extent encompass the determinants of diagenetic processes The scope has been limited to reef diagenesis because we feel that reefs have relatively clearly defined geometries which facilitate the evaluation of diagenetic trends and the definition of diagenetic models On the other hand their many different components make reefs somewhat more complex than other deposits and this creates difficulties in deciphering diagenetic histories the study of reefs therefore is not the simplest manner of solving the many problems relating to carbonate diagenesis An additional reason for evaluating reef diagenesis is the reservoir potential of these carbonate bodies To illustrate the point in the recent collection of 35 case studies of carbonate reservoirs Roehl and Choquette 1985 reefs were involved in 15 The emphasis on porosity development

in many studies of the present volume is therefore not of mere academic interest Biology and Geology of Coral Reefs V4
