Dynamical Systems in Classical Mechanics Valerii Viktorovich Kozlov, 1995 This book shows that the phenomenon of integrability is related not only to Hamiltonian systems but also to a wider variety of systems having invariant measures that often arise in nonholonomic mechanics Each paper presents unique ideas and original approaches to various mathematical problems related to integrability stability and chaos in classical dynamics Topics include the inverse Lyapunov theorem on stability of equilibria geometrical aspects of Hamiltonian mechanics from a hydrodynamic perspective current unsolved problems in the dynamical systems approach to classical mechanics

American Book Publishing Record, 2001

Nonlinear Evolution Equations Nina Nikolaevna Uraltseva, 1995-05-19 This collection focuses on nonlinear problems in partial differential equations Most of the papers are based on lectures presented at the seminar on partial differential equations and mathematical physics at St Petersburg University Among the topics explored are the existence and properties of solutions of various classes of nonlinear evolution equations nonlinear imbedding theorems bifurcations of solutions and equations of mathematical physics Navier Stokes type equations and the nonlinear Schrodinger equation The book will be useful to researchers and graduate students working in partial differential equations and mathematical physics

Bikchentaev, Fuad Kittaneh, Mohammad Sal Moslehian, Yuki Seo, 2024-12-18 This book is a comprehensive and advanced exploration of trace inequalities in the context of matrices and operators acting on Hilbert spaces Its goal is to present elegant inequalities with innovative proofs Instead of presenting generalized versions that can be complicated and lack clarity the book focuses on beautiful and original inequalities Divided into eight chapters this book is designed for researchers and graduate students in mathematics physics and engineering It provides detailed explanations for most of the results and includes a variety of

exercises and problems to help readers understand the content and inspire further research into advanced topics

Spectral Analysis in Geometry and Number Theory Motoko Kotani, Hisashi Naito, Tatsuya Tate, 2009 This volume is an outgrowth of an international conference in honor of Toshikazu Sunada on the occasion of his sixtieth birthday The conference took place at Nagoya University Japan in 2007 Sunada's research covers a wide spectrum of spectral analysis including interactions among geometry number theory dynamical systems probability theory and mathematical physics Readers will find papers on trace formulae isospectral problems zeta functions quantum ergodicity random waves discrete geometric analysis value distribution and semiclassical analysis This volume also contains an article that presents an overview of Sunada's work in mathematics up to the age of sixty

Three Papers on Algebras and Their

Representations V. N. Gerasimov, N. G. Nesterenko, A. I. Valitskas, 1993 This book contains the doctoral dissertations of three students from Novosibirsk who participated in the seminar of L. A. Bokut The dissertation of Gerasimov focuses on Cohn's theory of noncommutative matrix localizations Gerasimov presents a construction of matrix localization that is not directly related to prime matrix ideals of Cohn but rather deals with localizations of arbitrary subsets of matrices over a ring The work of Valitskas applies ideas and constructions of Gerasimov to embeddings of rings into radical rings in the sense of Jacobson to develop a theory essentially parallel to Cohn's theory of embeddings of rings into skew fields Nesterenko's dissertation solves some important problems of Artin and Bergman about representations of infinite dimensional algebras and categories in triangular matrices over commutative rings
