Calderon with Commentary** Alberto P.

Calderón, 2008 Alberto Calderon was one of the leading mathematicians of the twentieth century His fundamental pioneering work reshaped the landscape of mathematical analysis This volume presents a wide selection from some of Calderon's most influential papers They range from singular integrals to partial differential equations from interpolation theory to Cauchy integrals on Lipschitz curves from inverse problems to ergodic theory The depth originality and historical impact of these works are vividly illustrated by the accompanying commentaries by some of today's leading figures in analysis In addition two biographical chapters preface the volume They discuss Alberto Calderon's early life and his mathematical career

**Collected Papers of John Milnor** John Willard Milnor, 1994      *Selected Works of Phillip A. Griffiths with Commentary* Phillip Griffiths, Maurizio Cornalba, 2003 Over the last four decades Phillip Griffiths has been a central figure in mathematics During this time he made crucial contributions in several fields including complex analysis algebraic geometry and differential systems His books and papers are distinguished by a remarkably lucid style that invites the reader to understand not only the subject at hand but also the connections among seemingly unrelated areas of mathematics Even today many of Griffiths' papers are used as a standard source on a subject Another important feature of Griffiths' writings is that they often bring together classical and modern mathematics The four parts of *Selected Works* Analytic Geometry Algebraic Geometry Variations of Hodge Structures and Differential Systems are organized according to the subject matter and are supplemented by Griffiths' brief but extremely illuminating personal reflections on the mathematical content and the times in which they were produced Griffiths' *Selected Works* provide the reader with a panoramic view of important and exciting mathematics during the second half of the 20th century      *The Selected Works of Sigurdur Helgason* Sigurdur Helgason, 2009 Collects the articles that cover invariant differential operators geometric properties of solutions to differential equations on symmetric spaces double fibrations in integral geometry spherical functions and spherical transforms duality for symmetric spaces representation theory and the Fourier transform on  $G/K$       **The Selected Works of Phillip A. **Thurston with Commentary** Benson Farb,David Gabai,Steven P. Kerckhoff,2023-06-08 William Thurston s work has had a profound influence on mathematics He connected whole mathematical subjects in entirely new ways and changed the way mathematicians think about geometry topology foliations group theory dynamical systems and the way these areas interact His emphasis on understanding and imagination in mathematical learning and thinking are integral elements of his distinctive legacy This four part collection brings together in one place Thurston s major writings many of which are appearing in publication for the first time Volumes I III contain commentaries by the Editors Volume IV includes a preface by Steven P Kerckhoff Volume III contains William Thurston s papers on dynamics and computer science and papers written for general audiences Additional miscellaneous papers are also included such as his 1967 New College undergraduate thesis which foreshadows his later work *The Geometry and Topology of Three-Manifolds* William P. **Associated Graded Rings** Jean-Pierre Tignol,Adrian R. Wadsworth,2015-04-03 This monograph is the first book length treatment of valuation theory on finite dimensional division algebras a subject of active and substantial research over the last forty years Its development was spurred in the last decades of the twentieth century by important advances such as Amitsur

s construction of non crossed products and Platonov s solution of the Tannaka Artin problem This study is particularly timely because it approaches the subject from the perspective of associated graded structures This new approach has been developed by the authors in the last few years and has significantly clarified the theory Various constructions of division algebras are obtained as applications of the theory such as noncrossed products and indecomposable algebras In addition the use of valuation theory in reduced Whitehead group calculations after Hazrat and Wadsworth and in essential dimension computations after Baek and Merkurjev is showcased The intended audience consists of graduate students and research mathematicians

**Rings and Things and a Fine Array of Twentieth Century Associative Algebra** Carl Clifton Faith,2004 This book surveys more than 125 years of aspects of associative algebras especially ring and module theory It is the first to probe so extensively such a wealth of historical development Moreover the author brings the reader up to date in particular through his report on the subject in the second half of the twentieth century Included in the book are certain categorical properties from theorems of Frobenius and Stickelberger on the primary decomposition of finite Abelian formulations of the latter by Krull Goldman and others Maschke s theorem on the representation theory of finite groups over a field and the fundamental theorems of Wedderburn on the structure of finite dimensional algebras Goldie and others A special feature of the book is the in depth study of rings with chain condition on annihilator ideals pioneered by Noether Artin and Jacobson and refined and extended by many later mathematicians Two of the author s prior works *Algebra Rings Modules and Categories I and II* Springer Verlag 1973 are devoted to the development of modern associative algebra and ring and module theory Those bibliography of over 1 600 references and is exhaustively indexed In addition to the mathematical survey the author gives candid and descriptive impressions of the last half of the twentieth century in Part II Snapshots of fellow graduate students at the University of Kentucky and at Purdue Faith discusses his Fulbright Nato Postdoctoral at Heidelberg and at the Institute for Advanced Study IAS at Princeton his year as a visiting scholar at Berkeley and the many acquaintances he met there and in subsequent travels in India Europe and most recently Barcelona Comments on the first edition Researchers in algebra should find it both full references as to the origin and development of the theorem I know of no other work in print which does this as thoroughly and as broadly John O Neill University of Detroit at Mercy Part II Snapshots of Mathematicians of my age and younger will relish reading Snapshots James A Huckaba University of Missouri Columbia

enlightening tricks to many areas of the field The fifteen papers included in the volume represent the broad impact of Amitsur's work on such areas as the theory of finite simple groups algebraic groups PI algebras and growth of rings quadratic forms and division algebras torsors and Severi Brauer surfaces Hopf algebras and braces invariants automorphisms and derivations     Bulletin of the American Mathematical Society ,2003     **Bulletin (new Series) of the American Mathematical Society** ,2003     *Book Review Index* ,2003 Every 3rd issue is a quarterly cumulation     *Helmut Hasse und Emmy Noether* Helmut Hasse,Emmy Noether,Franz Lemmermeyer,Peter Roquette,2006 This book reproduces the complete extant correspondence between Emmy Noether and Helmut Hasse There are 82 such letters of which 79 are from Noether to Hasse dating from 1925 until Noether's sudden death in 1935 The correspondence reflects a crucial period in the development of 20th century algebra and number theory in particular class field theory Details of proofs appear alongside with conjectures and speculations Also discussed are questions of textbook presentation e g of Galois theory Aside from mathematical details the spontaneity of Noether's style allows many glimpses at the image that Emmy Noether and Helmut Hasse had of the topics they were working in The Hasse Noether correspondence is a rich source for those who are interested in the rise and the development of mathematical notions and ideas Each letter is accompanied by a detailed commentary supplied by the editors For the convenience of the reader numerous cross references extended indexes and short biographies of all persons mentioned in the correspondence have been added     **Algebraists' Homage: Papers in Ring Theory and Related Topics** Shimshon A.
