**Selected Works of Ellis Kolchin with Commentary** Ellis Robert Kolchin, Alexandru Buium, Phyllis Joan Cassidy, 1999

The work of Joseph Fels Ritt and Ellis Kolchin in differential algebra paved the way for exciting new applications in constructive symbolic computation differential Galois theory the model theory of fields and Diophantine geometry This volume assembles Kolchin's mathematical papers contributing solidly to the archive on construction of modern differential algebra This collection of Kolchin's clear and comprehensive papers in themselves constituting a history of the subject is an invaluable aid to the student of differential algebra In 1910 Ritt created a theory of algebraic differential equations modeled not on the existing transcendental methods of Lie but rather on the new algebra being developed by E Noether and B van der Waerden Building on Ritt's foundation and deeply influenced by Weil and Chevalley Kolchin opened up Ritt theory to modern algebraic geometry In so doing he led differential geometry in a new direction By creating differential algebraic geometry and the theory of differential algebraic groups Kolchin provided the foundation for a new geometry that has led to both a striking and an original approach to arithmetic algebraic geometry Intriguing possibilities were introduced for a new language for nonlinear differential equations theory The volume includes commentary by A Borel M Singer and B Poizat Also Buium and Cassidy trace the development of Kolchin's ideas from his important early work on the differential Galois theory to his later groundbreaking results on the theory of differential algebraic geometry and differential algebraic groups Commentaries are self contained with numerous examples of various aspects of differential algebra and its applications Central topics of Kolchin's work are discussed presenting the history of differential algebra and exploring how his work grew from and transformed the work of Ritt New directions of differential algebra are illustrated outlining important current advances Prerequisite to understanding the text is a background at the beginning graduate level in algebra specifically commutative algebra the theory of field extensions and Galois theory

[Selected Works of Phillip A. Griffiths with Commentary](#) Phillip Griffiths, Maurizio Cornalba, 2003 Over the last four decades Phillip Griffiths has been a central figure in mathematics During this time he made crucial contributions in several fields including complex analysis algebraic geometry and differential systems His books and papers are distinguished by a remarkably lucid style that invites the reader to understand not only the subject at hand but also the connections among seemingly unrelated areas of mathematics Even today many of Griffiths papers are used as a standard source on a subject Another important feature of Griffiths writings is that they often bring together classical and modern mathematics The four parts of Selected Works Analytic Geometry Algebraic Geometry Variations of Hodge Structures and Differential Systems are organized according to the subject matter and are supplemented by Griffiths brief but extremely illuminating personal reflections on the mathematical content and the times in which they were produced Griffiths Selected Works provide the reader with a panoramic view of important and exciting mathematics during the second half of the 20th century

**Selected Papers of E. B. Dynkin with Commentary** Evgenii Borisovich Dynkin, Gary M. Seitz, 2000 Eugene Dynkin is a rare example of a contemporary mathematician who has achieved results in two quite different areas of research algebra and probability In both areas his ideas constitute an essential part of modern mathematical knowledge and form a basis for further development Although his last work in algebra was published in 1955 his contributions continue to influence current research in algebra and in the physics of elementary particles His work in probability is part of both the historical and the modern development of the topic

**Selected Works of Ilya Piatetski-Shapiro** Il'ia Iosifovich Piatetski-Shapiro, 2000 Piatetski-Shapiro himself with the consultation of the editors selected these 162 papers some of which appear in English for the first time Together they represent almost 50 years of his service to mathematics and though arranged by subject are nearly in chronological order Each of the sections conclude with commentary on the entire work of Piatetski-Shapiro's in that area including related developments Following his autobiographical Etude on life and automorphic forms in the Soviet Union sections cover early papers in harmonic analysis and number theory automorphic functions and discrete groups bounded homogeneous domains applied mathematics algebraic geometry automorphic L functions and theta lifts and applications to generalized Ramanujan conjectures Books and long papers have been excluded No index Annotation copyrighted by Book News Inc Portland OR

[Selected Works of Ilya Piatetski-Shapiro](#) James Cogdell, Simon Gindikin, Peter Sarnak, 2022-11-03 This selection of papers of I. Piatetski-Shapiro represents almost 50 years of his mathematical activity Included are many of his major papers in harmonic analysis number theory discrete groups bounded homogeneous domains algebraic geometry automorphic forms and automorphic L functions The papers in the volume are intended as a representative and accurate reflection of both the breadth and depth of Piatetski-Shapiro's work in mathematics Some of his early works such as those on the prime number theorem and on sets of uniqueness for trigonometric series appear for the first time in English Also included are several commentaries by his close colleagues This volume offers an elegant representation of the contributions made by this renowned mathematician

**Selected Works of Frederick J. Almgren, Jr.** Frederick J. Almgren, 1999 This volume offers a unique collection of some of the work of Frederick J. Almgren Jr. the man most noted for defining the shape of geometric variational problems and for his role in founding The Geometry Center Included in the volume are the following a summary by Sheldon Chang of the famous 1700 page paper on singular sets of area minimizing  $m$  dimensional surfaces in  $\mathbb{R}^n$  a detailed summary by Brian White of Almgren's contributions to mathematics his own announcements of several longer papers important shorter papers and memorable expository papers Almgren's enthusiasm for the subject and his ability to locate mathematically beautiful

problems that were ready to be solved attracted many students who further expanded the subject into new areas. Many of these former students are now known for the clarity of their expositions and for the beauty of the problems that they work on. As Almgren's former graduate student wife and colleague Professor Taylor has compiled an important volume on an extraordinary mathematician. This collection presents a fine comprehensive view of the man's mathematical legacy.

*Mathematics as Metaphor* I. I. Manin, 2007. Includes essays that are grouped in three parts: Mathematics, Mathematics and Physics, and Language, Consciousness, and Book reviews. This book is suitable for those interested in the philosophy and history of mathematics, physics, and linguistics. **The Geometry and Topology of Three-Manifolds** William P.

Thurston, 2023-06-16. William Thurston's work has had a profound influence on mathematics. He connected whole mathematical subjects in entirely new ways and changed the way mathematicians think about geometry, topology, foliations, group theory, dynamical systems, and the way these areas interact. His emphasis on understanding and imagination in mathematical learning and thinking are integral elements of his distinctive legacy. This four-part collection brings together in one place Thurston's major writings, many of which are appearing in publication for the first time. Volumes I-III contain commentaries by the Editors. Volume IV includes a preface by Steven P. Kerckhoff. Volume IV contains Thurston's highly influential, though previously unpublished 1977-78 Princeton Course Notes on the Geometry and Topology of 3-manifolds. It is an indispensable part of the Thurston collection but can also be used on its own as a textbook or for self study. *The*

*Selected Works of Phillip A. Griffiths with Commentary: Differential systems* Phillip Griffiths, 2003. **Topological Galois Theory** Askold Khovanskii, 2014-10-10. This book provides a detailed and largely self-contained description of various classical and new results on solvability and unsolvability of equations in explicit form. In particular, it offers a complete exposition of the relatively new area of topological Galois theory initiated by the author. Applications of Galois theory to solvability of algebraic equations by radicals, basics of Picard-Vessiot theory, and Liouville's results on the class of functions representable by quadratures are also discussed. A unique feature of this book is that recent results are presented in the same elementary manner as classical Galois theory, which will make the book useful and interesting to readers with varied backgrounds in mathematics, from undergraduate students to researchers. In this English language edition, extra material has been added. Appendices A-D, the last two of which were written jointly with Yura Burda.

*Collected Papers* Armand Borel, 1983. This book collects the papers published by A. Borel from 1983 to 1999. About half of them are research papers written on his own or in collaboration on various topics pertaining mainly to algebraic or Lie groups, homogeneous spaces, arithmetic groups, L<sup>2</sup> spectrum, automorphic forms, cohomology, and covolumes, L<sup>2</sup> cohomology of symmetric or locally symmetric spaces, and to the Oppenheim conjecture. Other publications include surveys and personal recollections of D. Montgomery, Harish-Chandra, and A. Weil, considerations on mathematics in general, and several articles of a historical nature on the School of Mathematics at the Institute for Advanced Study, on N. Bourbaki, and on selected aspects of the works of H.

Weyl C Chevalley E Kolchin J Leray and A Weil The book concludes with an essay on H Poincaré and special relativity Some comments on and corrections to a number of papers have also been added
