Selection of Materials and Manufacturing Processes for Engineering Design Mahmoud M. Farag,1989-01-01

Materials and Process Selection for Engineering Design Mahmoud M. Farag,2020-12-30 Introducing a new engineering product or changing an existing model involves developing designs reaching economic decisions selecting materials choosing manufacturing processes and assessing environmental impact These activities are interdependent and should not be performed in isolation from each other This is because the materials and processes used in making a product can have a major influence on its design cost and performance in service This Fourth Edition of the best selling Materials and Process Selection for Engineering Design takes all of this into account and has been comprehensively revised to reflect the many advances in the fields of materials and manufacturing including Increasing use of additive manufacturing technology especially in biomedical aerospace and automotive applications Emphasizing the environmental impact of engineering products recycling and increasing use of biodegradable polymers and composites Analyzing further into weight reduction of products through design changes as well as material and process selection especially in manufacturing products such as electric cars Discussing new methods for solving multi criteria decision making problems including multi component material selection as well as concurrent and geometry dependent selection of materials and joining technology Increasing use of MATLAB by engineering students in solving problems This textbook features the following pedagogical tools New and updated practical case studies from industry A variety of suggested topics and background information for in class group work Ideas and background information for reflection papers so readers can think critically about the material they have read give their interpretation of the issues under discussion and the lessons learned and then propose a way forward Open book exercises and questions at the end of each chapter where readers are evaluated on how they use the material rather than how well they recall it in addition to the traditional review questions Includes a solutions manual and PowerPoint lecture materials for adopting professors Aimed at students in mechanical manufacturing and materials engineering as well as professionals in these fields this book provides the practical know how in order to choose the right materials and processes for development of new or enhanced products

processes used in making the product can have a large influence on its design cost and performance in service Since the publication of the second edition of this book changes have occurred in the fields of materials and manufacturing Industries now place more emphasis on manufacturing products and goods locally rather than outsourcing Nanostructured and smart materials appear more frequently in products composites are used in designing essential parts of civilian airliners and biodegradable materials are increasingly used instead of traditional plastics More emphasis is now placed on how products affect the environment and society is willing to accept more expensive but eco friendly goods In addition there has been a change in the emphasis and the way the subjects of materials and manufacturing are taught within a variety of curricula and courses in higher education This third edition of the bestselling Materials and Process Selection for Engineering Design has been comprehensively revised and reorganized to reflect these changes In addition the presentation has been enhanced and the book includes more real world case studies

Materials and Process Selection for Engineering Design, Second Edition Mahmoud M. Farag, 2008 Taking a practical approach this work illustrates how design materials and process selection must mesh together and be considered along with economic and environmental analysis when developing a new product or changing an existing model It also considers the trade offs that must sometimes be made This second edition adds and revises topics such as environmental function and aesthetic considerations in design environmental impact assessment of materials and processes life cycle and recycling economics and materials substitution The book begins with an intro that reviews stages of product development This is followed by three sections covering Mechanical failures environmental degradation and materials that resist different types of failure Elements of engineering design and the effect of material properties and manufacturing processes on the design of components Economic and environmental aspects of materials and manufacturing processes as well as quantitative and computer assisted methods for screening ranking alternatives and deciding on the optimum material process combination Examples and detailed case studies illustrating practical applications as well as materials selection and substitution from a variety of industries are included Each chapter begins with clear objectives and ends with a summary review questions and bibliography Appendices supply tables of composition and properties and a glossary of technical terms SI units are used with Imperial units given when possible This student friendly text demonstrates how to balance design materials process selection and economic and environmental analysis to optimize manufacturing processes for a given component The author maintains a book website which features PowerPoint presentations for each chapter and access to a solutions manual for qualifying instructors Professor Farag's book website

Knight, 2010-12-08 Hailed as a groundbreaking and important textbook upon its initial publication the latest iteration of Product Design for Manufacture and Assembly does not rest on those laurels In addition to the expected updating of data in

all chapters this third edition has been revised to provide a top notch textbook for university level courses in product design and manufacturing design The authors have added a comprehensive set of problems and student assignments to each chapter making the new edition substantially more useful See what s in the Third Edition Updated case studies on the application of DFMA techniques Extended versions of the classification schemes of the features of products that influence the difficulty of handling and insertion for manual high speed automatic and robot assembly Discussions of changes in the industry such as increased emphasis on the use of surface mount devices New data on basic manufacturing processes Coverage of powder injection molding Recognized as international experts on the re engineering of electro mechanical products the methods and guidelines developed by Boothroyd Dewhurst and Knight have been documented to provide significant savings in the product development process Often attributed with creating a revolution in product design the authors have been working in product design manufacture and assembly for more than 25 years Based on theory yet highly practical their text defines the factors that influence the ease of assembly and manufacture of products for a wide range of the basic processes used in industry It demonstrates how to develop competitive products that are simpler in configuration and easier to manufacture with reduced overall costs

Integrated Product and Process Design and Development

Edward B. Magrab,1997-07-23 The Integrated Product and Process Design and Development IP2D2 method is quickly becoming the new standard for the rapid creation of competitively priced high quality products IP2D2 indicates in the broadest sense the overlapping interacting and iterative nature of all of the aspects of the product realization process The method is a continuous process whereby a product s cost performance and features value and time to market lead to a company s increased profitability and market share This new text reference reflects the sweeping changes this approach has brought to traditional engineering design courses and to industry Carefully organized with sections on each major stage of the approach Integrated Product and Process Design and Development The Product Realization Process is the first complete treatment of this new direction in engineering The book is designed to help you cultivate an attitude toward design that encourages creativity and innovation while considering the equally important considerations of customer requirements and satisfaction quality reliability manufacturing methods and material selection assembly cost the environment and scheduling Extensively class tested in senior and graduate level engineering design courses at the University of Maryland the book gives equal time to conceptual and practical aspects As each concept is introduced and explained two book long examples provide you with a realistic sense of how a product s creation progresses through its various stages Numerous checklists and other practical guidelines help you learn to apply the IP2D2 method to your own work Students and newly graduated engineers will appreciate the modern perspective that more nearly reflects what they will encounter in practice than what is obtainable in traditional texts For more experienced practicing engineers this is the new information they need to keep up with recent rapid changes and stay marketable today and in the future

Materials Enabled Designs Michael Pfeifer,2009-06-02

There are books aplenty on materials selection criteria for engineering design Most cover the physical and mechanical properties of specific materials but few offer much in the way of total product design criteria This innovative new text reference will give the Big picture view of how materials should be selected not only for a desired function but also for their ultimate performance durability maintenance replacement costs and so on Even such factors as how a material behaves when packaged shipped and stored will be taken into consideration For without that knowledge a design engineer is often in the dark as to how a particular material used in particular product or process is going to behave over time how costly it will be and ultimately how successful it will be at doing what is supposed to do This book delivers that knowledge Brief but comprehensive review of major materials functional groups mechanical electrical thermal chemical by major material categories metals polymers ceramics composites Invaluable guidance on selection criteria at early design stage including such factors as functionality durability and availability Insight into lifecycle factors that affect choice of materials beyond simple performance specs including manufacturability machinability shelf life packaging and even shipping characteristics Unique help on writing materials selection specifications *Material Selections by a Hybrid Multi-Criteria Approach* Fabrizio D'Errico, 2015-01-16 This Brief presents a new method that is based on the author and his students shared experience in applying a structured procedure that has as its main goal the creation of a material selection technique that uses language and employs a platform that is not restricted to engineers Based on a hybrid approach that exploits both traditional and semi quantitative concepts it moves forward step by step and uses a platform based on a Quality Function Deployment matrix framework Candidate materials are screened out and finally assessed by two user friendly graphic analysis tools one based on the value curve of the product and the other on an original Bubble Maps tool The Brief is written for all those whose aim is for a better understanding of how to integrate and speed up the entire product development process from the initial product concept and engineering design phases to design specs manufacturability and product marketing with optimal choice of materials *Engineering Materials and Processes Desk Reference* Michael F.
