Taylor,2009-06-23 This collected volume presents radically new directions which are emerging in cognitive lexical semantics research A number of papers re ignite the polysemy vs monosemy debate and testify to the fact that polysemy is no longer simply taken for granted but is currently a much more contested issue than it was in the 1980s and 1990s Other papers offer fresh perspectives on the prototype structure of lexical categories while generally accepted notions about the radial network structure of categories are questioned in papers on the development of word meaning in child language acquisition and in diachrony Additional topics include the interaction of lexical and constructional meaning and the relationship between word meanings and the contexts in which the words are encountered This book is of interest to semanticists and cognitive linguists as well as to scholars working in the broader field of cognitive science The Routledge Handbook of Translation and Cognition Fabio Alves,Arnt Jakobsen,2020-05-31 The Routledge Handbook of Translation and Cognition provides a comprehensive state of the art overview of how translation and cognition relate to each other discussing the most important issues in the fledgling sub discipline of Cognitive Translation Studies CTS from foundational to applied aspects With a strong focus on interdisciplinarity the handbook surveys concepts and methods in neighbouring disciplines that are concerned with cognition and how they relate to translational activity from a cognitive perspective Looking at different types of cognitive processes this volume also ventures into emergent areas such as neuroscience artificial intelligence cognitive ergonomics and human computer interaction With an editors introduction and 30 chapters authored by leading scholars in the field of Cognitive Translation Studies this handbook is the essential reference and resource for students and researchers of translation and cognition and will also be of interest to those working in

cognitive psychology **Cognitive Processes in Stereotyping and Intergroup Behavior** David L. Hamilton,2015-08-11 Originally published in 1981 this volume brings together contributions by several of the authors whose research had contributed significantly to the recent advances in our understanding of the role of cognitive processes in stereotyping and intergroup behaviour at the time While each chapter reflects a cognitive approach to its subject matter a broad range of topics issues and contexts is addressed by this collection of authors In the introductory chapter the authors present an historical overview of psychological research on stereotyping discussing historical trends in this literature and summarizing the conceptual orientations which had guided research in this area at the time This chapter not only provides useful background information for the reader but also presents a broader context within which the current cognitively oriented research on which the remaining chapters focus can be viewed Each of the next six chapters reports on integrative program of studies bearing on some aspect of the relationship of cognitive functioning to stereotyping and or intergroup behaviour

Time: Language, Cognition & Reality Kasia M. Jaszczolt,Louis de Saussure,2013-06-27 This book considers linguistic and mental representations of time Prominent linguists and philosophers from all over the world examine and report on recent work on the representation of temporal reference the interaction of the temporal information from tense aspect modality temporal adverbials and context and the representation of the temporal relations between events and states as well as between facts propositions sentences and utterances They link this to current research on the cognitive processing of temporal reference linguistic and philosophical semantics psychology and anthropology The book is divided into three parts Time Tense and Temporal Reference in Discourse Time and Modality and Cognition and Metaphysics of Time It will interest scholars and advanced students of time and temporal reference in linguistics philosophy anthropology psychology and cognitive science **Cognition and Acquired Language Disorders - E-Book** Richard K. Peach,Lewis P.

Shapiro,2011-12-10 This new graduate level textbook *Cognition and Acquired Language Disorders An Information Processing Approach* addresses the cognitive aspects of language and communication It assembles the most recent information on this topic addressing normal cognitive processing for language in adults the cognitive impairments underlying language disorders arising from a variety of neurologic conditions and current assessment and treatment strategies for the management of these disorders The text is organized using an information processing approach to acquired language disorders and thus can be set apart from texts that rely upon a more traditional syndrome based approach e g stroke dementia and traumatic brain injury This approach facilitates the description and treatment of acquired language disorders across many neurologic groups when particular cognitive deficits are identified Other useful features of the text include assessment and treatment protocols that are based on current evidence These protocols provide students and clinicians a ready clinical resource for managing

language disorders due to deficits in attention memory linguistic operations and executive functions Unique process oriented approach organizes content by cognitive processes instead of by syndromes so you can apply the information and treatment approaches to any one of many neurologic groups with the same cognitive deficit Cognitive domains are described as they relate to communication rather than separated as they are in many other publications where they are treated as independent behaviors A separate section on normal processing includes five chapters providing a strong foundation for understanding the factors that contribute to disordered communication and its management The evidence based approach promotes best practices for the most effective management of patients with cognitive communication disorders Coverage of the cognitive aspects of communication helps you meet the standards for certification in speech language pathology A strong author team includes two lead authors who are well known and highly respected in the academic community along with expert contributors ensuring a comprehensive advanced clinical text reference

Theories of Memory Alan F. Collins,Martin A. Conway,1993 The main emphasis throughout this collection is on theoretical issues and

how they relate to existing empirical work Updates on multisensory perception: from neurons to cognition Angelo Maravita, Nadia Bolognini, In recent years there has been a dramatic progress in understanding how stimuli from different sensory modalities are integrated among each other Multisensory integration results in a unitary representation of the world that strongly characterizes perception and cognition in humans Knowledge about multi sensory integration has research techniques and approaches including neurophysiology experimental psychology neuropsychology neuroimaging and computational modelling This special issue aims at presenting an up to date integrative overview of the physiological psychological developmental and functional processes associated with multisensory integration The proposed collection of papers is organized thematically into sections each featuring a state of the art review of key themes in multisensory research from more approaches in the animal to the study of multisensory perception and cognition in humans Specifically this special issue will consider The physiological mechanisms of multisensory processing in cortical and subcortical brain structures of model animal species rat cat and monkey current biologically inspired computational modelling of multisensory integration evidence about the multisensory contributions to perception in humans as highlighted by psychophysical and neuropsychological evidence the neural basis of multisensory processing in the human brain uncovered by recent neuroimaging techniques including EEG PET fMRI the consequences of the breakdown of normal sensory integration as shown by studies with techniques of brain stimulation in humans developmental processes of multisensory perception in humans and the constraints for the emergence of multisensory processes in relation to sensory experience the issue of crossmodal neuroplasticity concerning behavioral and neural changes following sensory deprivation The challenge of this Research Topic is to provide an interdisciplinary context allowing to understand the basic principles of multisensory integration in humans and the key issues that this fascinating field of study rises for future research Portuguese grammar Jussara Abração, Carlos Alexandre Gonçalves, 2025-01-27 Spoken by millions of people on four continents Portuguese remains a lesser studied language To help improve the linguistic understanding of this pluricentric language the present volume brings together ten studies about different grammatical phenomena observed in Portuguese varieties from suffixation to intercalated temporal clauses and non concatenative verbal inflection among other topics Focusing on two main axes usage and cognition these studies draw on the theoretical frameworks of Functional Linguistics and Cognitive Linguistics but build a cohesive whole insofar as they all offer usage based language approaches By presenting an overview of recent research on Portuguese and its varieties the book paves the way for the inclusion of Portuguese in the set of Neo Latin languages best known to the general public **Neurostimulation: Exploring Perceptual & Cognitive Enhancement** Adam Joseph Toth, Mark J. Campbell, Adam Bruton, 2025-08-06 Research investigating the use of electrical or magnetic stimuli to alter the electrophysiology of the central and peripheral nervous systems has flourished in recent years The popularity of these techniques largely stems from their ability to create temporary lesions or enhancements in nervous system function To

date a plethora of literature has emerged examining the role of neurostimulation for augmenting motor function due to the relative ease of objectively quantifying changes in behavior performance and even motor evoked potential amplitudes within individual muscles. However, the role of neurostimulation in enhancing perceptual and cognitive abilities is under examined and is an area that is now continually gaining research attention. Evaluating the role of various forms of neurostimulation on cognitive and perceptual abilities can be challenging due to the lack of control over the underlying neural activity in the central nervous system and the sensitivity with which current measurement tools and tasks quantify cognitive and perceptual functioning. This research topic aims to facilitate the publication of high quality methodologically sound research that addresses the quantification and effect that various forms of neurostimulation have on cognitive and perceptual processes across the lifespan. In doing so we endeavor to help advance the field of neurostimulation with respect to robustly mapping the effect of neurostimulation on cognitive and perceptual performance.

Human Perception Marco Bertamini, Michael Kubovy, 2018-05-08 It takes little or no effort for us to gather information by means of our senses but it would be a mistake to take this as a sign that perception is simple. It was in the 20th century and after the establishment of psychology as a scientific discipline that the study of perception flourished. This important volume gathers together a selection of articles and essays which represent some of the most interesting discoveries and theories. It gives a flavour of the many different approaches and ideas taken by cognitive psychologists in this fascinating area. Topics covered include attention, brain systems, object interpolation and completion, object recognition and classification, different types of objects and information processing and models.

Cognitive Psychology Lawrence W. Barsalou, 2014-02-25 This text presents the basic concepts of modern cognitive psychology in a succinct and accessible manner. Empirical results, theoretical developments and current issues are woven around basic concepts to produce coherent accounts of research areas. Barsalou's primary goal is to equip readers with a conceptual vocabulary that acquaints them with the general approach of cognitive psychology and allows them to follow more technical discussions elsewhere. In meeting this goal he discusses the traditional work central to modern thinking and reviews current work relevant to cognitive science. Besides focusing on research and theory in cognitive psychology, Barsalou also addresses its fundamental assumptions. Because the cognitive approach to psychology is somewhat subtle, often misunderstood and sometimes controversial, it is essential for a text on cognitive psychology to address the assumptions that underlie it. Therefore, three of the eleven chapters address the meta-assumptions that govern research and theory in cognitive psychology. These meta-chapters provide a deeper understanding of the content areas and a clearer vision of what cognitive psychologists are trying to accomplish. The remaining eight content chapters cover the central topics in cognitive psychology. This book will be of value to a variety of audiences. Ideal for researchers in computer science, linguistics, philosophy, anthropology and neuroscience who wish to acquaint themselves with cognitive psychology, it may also be used as a text for courses in cognitive science and cognitive psychology. Lay readers who wish to learn about the cognitive approach

to scientific psychology will also find the volume useful
