Engineering Knowledge in the Age of the Semantic Web Enrico Motta,Nigel Shadbolt,Arthur Stutt,Nick Gibbins,2011-03-22 The central themes of the 14th International Conference on Knowledge Engineering and Knowledge Management EKAW 2004 were ontological engineering and the Semantic Web These provide the key foundational and delivery mechanisms for building open Web based knowledge services However consistent with the tradition of EKAW conferences EKAW 2004 was concerned with all aspects of eliciting acquiring modelling and managing knowledge and its role in the construction of knowledge intensive systems Indeed a key aspect of the Knowledge Acquisition Workshops KAWs held in the US Europe and Asia over the past 20 years has been the emphasis on holistic knowledge engineering addressing problem solving usability socio technological factors and knowledge modelling rather than simply analyzing and designing symbol level inferential mechanisms The papers included in this volume are thus drawn from a variety of research areas both at the cutting edge of research in ontologies and the Semantic Web and in the more traditionally grounded areas of knowledge engineering A Semantic Web service can be seen as the addition of semantic technologies to Web services to produce Web accessible services that can be described using appropriate ontologies reasoned about and combined automatically Since Web services can be seen as Web accessible computational objects much of the work in this area is also concerned with problem solving methods PSMs
