Mistel German Composite Aircraft And Operations 19421945:

Mistel Robert Forsyth,2001 This is the first detailed book in the English language that studies the origins design development and operations of German composite aircraft during the Second World War Known as Mistel the concept was originally intended for use in times of peace as a means of extending the range of passenger and mail carrying aircraft But by 1942 as Nazi Germany struggled to fight an ever demanding war so a small team of pilots and technicians began to adapt the idea for military purposes Following a series of radical and dramatic glider based experiments a new formidable weapon emerged to stock the Luftwaffe s arsenal one that became known as the Grossbombe Super Bomb Drawing on several years of research and enhanced by superb color artwork and unrivalled technical drawings this book represents an important study of the Luftwaffe s super bomb which was used in a desperate attempt to hold off the Soviet advance towards Berlin in the closing months of the Second World War Using hundreds of wartime documents and reports and many new and previously unpublished accounts from the pilots of this extraordinary aircraft the author tells the story from both sides This book will serve as the standard reference for years to come *Luftwaffe Mistel Composite Bomber Units* Robert Forsyth,2015-09-20 The striking appearance of Luftwaffe s Mistel Composite attack aircraft might seem ridiculous to modern eyes but employed correctly these original fire and forget weapons were devastatingly effective as Allied sources testify This book draws on a wealth of first hand reports and revealing contemporary photographs to tell the full strange story of the Mistel units They were the product of a remarkable mix of desperation and innovation and were actually grounded in a pre war non military practise the mounting of one aircraft atop another was initially conceived to extend the ranges of passenger and mail carrying aircraft But as early as 1942 German planners saw the potential for use as a guided missile and by the end of the war the sight of a Ju 88 lashed to a BF 109 or FW 190 fighter bearing down on an Allied target was not as rare as one might expect This is a comprehensive account of the Mistel units from their design and development through the first deployments at D Day to the last desperate missions against key bridges on the Oder and the Neisse in the final weeks of the war

Luftwaffe Maritime Operations In World War II: Thought, Organization And Technology Major Winston A. Gould,2014-08-15 The development of airpower can be traced to three key elements thought organization and technology The Luftwaffe of World War II is no different This paper will examine the Luftwaffe s thought organization and technology as it pertains to maritime operations or as the modern United States Air Force USAF calls it Countersea Operations These maritime operations will include direct support of the Kriegsmarine and independent Luftwaffe operations against the Allies Luftwaffe thought will show that doctrinally the Luftwaffe was not as prepared for the maritime role its leaders thrust upon it but flexibility and the application of the tenets of airpower provided the basis for adaptation Also included will be an examination of the fierce rivalry between the Luftwaffe and Kreigsmarine senior leadership and how this interfered with the conduct of countersea operations Luftwaffe organization during World War II provided a more than adequate basis for

conducting the countersea campaign The adaptability of the operational and support structure allowed the Luftwaffe to accomplish a variety of missions even as their aircraft and weapons were proving deficient Finally the Luftwaffe was at the forefront of innovation in the field of aviation technology including airframe and weapon development Once again interference by senior leadership and equipment teething problems combined with increasing Allied attacks cost the Luftwaffe precious time

Ultimate Allied Fighters of the Second World War Justo Miranda,2024-01-07 During the five years of the Second World War the power of engines and speed of aircraft increased as much as it did during twenty years of peacetime Conventional aircraft and engines reached the limits marked in the original design and surpassed them very fast The basis for this huge achievement was exotic fuels short lived artificially overpowered engines propellers with four five and even six blades and thinner wings with special sections of laminar flow Then the faster Allied fighters began to be attacked by a demon that lived in the air scientists called it compressibility buffeting and different type of aircraft suffered it at different speeds and manifested itself in different ways The American and British designers never understood the true causes behind the aerodynamic phenomenon They were forced to adopt brute force solutions by increasing engine power on the turbojet powered fighters leaving in the background the research on the last projects of fighters driven by monster piston engines The purpose of this book is to present them to the public for its notable interest

Unmanned Systems of World Wars I and II H. R. Everett,2015-11-13 The first comprehensive technical history of air land sea and underwater unmanned systems by a distinguished U S Navy roboticist Military drones have recently been hailed as a revolutionary new technology that will forever change the conduct of war And yet the United States and other countries have been deploying such unmanned military systems for more than a century Written by a renowned authority in the field this book documents the forgotten legacy of these pioneering efforts offering the first comprehensive historical and technical accounting of unmanned air land sea and underwater systems Focusing on examples introduced during the two world wars H R Everett meticulously traces their development from the mid nineteenth century to the early Cold War A pioneering Navy roboticist Everett not only describes these systems in detail but also reverse engineers the designs in order to explain how they operated in real world conditions of the time More than 500 illustrations photographs drawings and plans many of them never before published accompany the text Everett covers the evolution of early wire guided submersibles tracing the development of power propulsion communication and control radio controlled surface craft deployed by both Germany and Great Britain in World War I radio controlled submersibles radio controlled aircraft including the TDR 1 assault drone project in World War II which laid the groundwork for subsequent highly classified drone programs and remote controlled ground vehicles including the Wehrmacht s Goliath and Borgward demolition carriers

Me 210/410 Zerstörer Units Robert Forsyth,2019-11-28 Intended as a progressive development of the twin engined Bf 110 Zerster destroyer or heavy fighter the Me 210 first took to the air in September 1939 However due to a lack of sufficient flight testing before being declared service ready the Me

210 suffered from a less than satisfactory reputation in respect to its flight characteristics and weak undercarriage. After enhancements were made to the fuselage and wings and the power of the plane was increased the Me 210 became the Me 410 in late 1942. By this stage of the war much was expected of the two types which were forced to fly in very dangerous skies over North Africa and in the defence of the German homeland. Both aircraft were deployed as heavy fighters, fighter bombers, reconnaissance platforms and interceptors seeing service with a number of different units. The Me 410 was fitted with 30 mm cannon, 21 cm underwing mortars and the colossal 5 cm BK cannon that was intended to pack a punch against the USAAF's four engined bombers which threatened the Reich in large numbers from 1943 onwards. In this title supported by contemporary photography and full colour artwork Robert Forsyth tells the complex story of the Me 210 and 410 detailing their development and assessing their capabilities as combat aircraft. He 162 Volksjäger Units Robert Forsyth, 2016-11-17

With the Third Reich on the brink of defeat Hitler's instructions to his designers were clear. He wanted a Volksjäger, a People's Fighter that was quick to produce and used minimal quantities of strategic materials. Heinkel rose to the challenge with the He 162, a fighter constructed of wood and metal that was designed, built and flown in the staggeringly short time of ten weeks. Professional pilots were in short supply and so the Luftwaffe was ordered to man the He 162 with hastily trained members of the Hitler Youth, a flawed plan that fortunately never came to fruition. Detailed aircraft profiles and never before seen photographs perfectly complement the analysis of the revolutionary Heinkel He 162 as author Robert Forsyth traces its entire history from the early design and production through to its limited combat experience. **Ground Combat** Ben Connable, 2025

Ground Combat reveals the gritty details of land warfare at the tactical level and challenges the overly subjective and often inaccurate American approach to characterizing war. Ben Connable's motivation for writing the book is to replace overly subjective analyses with an evidence based approach to examining war. From analyzing a set of over 400 global ground combat cases, Connable shows there has been a modest and evolutionary shift in the characteristics of ground combat from World War II through the early 2020s. This evidence of gradual change repudiates the popular but often hyperbolic arguments about military technical revolutions and that there is a singular character of war in the modern era. Connable identifies past and current weaknesses in military design and strategy, examines common characteristics in modern ground combat from the data and reframes the debate over the historical and prospective impact of emerging technologies on war. Ground Combat sets an evidentiary baseline and a new detail oriented standard for conflict research and policymaking. Ju 88 Aces of World War 2 Robert Forsyth, 2019-01-24

Initially designed as a fast medium bomber, the Junkers Ju 88 was also used as a Zerstörer heavy fighter by the Luftwaffe. It saw its combat debut over Poland in 1939 and heavy fighter variants saw action on every front up to VE Day. The ultimate Ju 88 fighter variant was the G model of 1944 which boasted a FuG 220 or 227 radar, an astounding array of cannon and machine gun armament and advanced Junkers Jumo or BMW engines. A dedicated nightfighter, the first Ju 88G 1s entered service with the Nachtjagd in the summer of 1944.

replacing Ju 88Cs as well as some Bf 110Gs. Despite suffering heavy losses in the final months of the war, Ju 88Gs also inflicted serious casualties on Bomber Command throughout the war. From patrolling over the Bay of Biscay to the Arctic circle opposing Allied convoys and most successfully as radar equipped nightfighters engaging RAF heavy bombers during defence of the Reich operations from late 1941, this is the story of the Ju 88 aces who menaced Allied aircraft and shipping throughout World War 2.

Six Air Forces Over the Atlantic Col. Joseph T. Molyson, Jr. (RET), 2024-04-16 The Battle of the Atlantic was the longest campaign of World War II lasting the entirety of the war in Europe from September 1939 to May 1945. It was also one of the war's most complex campaigns involving strategy, operations, tactics, logistics, politics, diplomacy and alliances. During the war's first two years, the United States was drawn deeper into partnership with Great Britain and closer toward conflict with Germany in the waters of the North Atlantic. Franklin Roosevelt realized this theater's importance. I believe the outcome of this struggle is going to be decided in the Atlantic. And so American, British and Canadian forces battled Germans at sea and in the air to protect the flow of first materiel and then men from the United States to the United Kingdom. The sea part has been well covered: how German U-boats and other warships hunted Allied convoys and how the Allies ultimately turned the tide. Not so much the air war. In *Six Air Forces over the Atlantic*, Joseph Molyson tells the story of the Battle of the Atlantic from the perspective of the air forces and airmen who waged it from the skies above the icy waters of the North Atlantic. He blends big picture attention to strategy and tactics with dramatic episodes of air to air and air to sea combat, including the engagement in which a British light bomber captured a German U-boat near Iceland. He details the close eye Franklin Roosevelt kept on the campaign, the effect B-24 Liberator bombers had, and the rise of the Royal Air Force Coastal Command as a true U-boat busting force. The result was victory in the Atlantic as well as a significant contribution to victory in World War II.

Me 262 vs P-51 Mustang Robert Forsyth, 2019-12-26 Arguably two of the finest fighters built during the course of World War II, the Me 262 and P-51 Mustang heralded new dawns in aircraft performance. Making its operational debut in the summer of 1944 and powered by the Jumo 004 jet engine, the Me 262 outclassed Allied planes in terms of speed and firepower ratio, offering a formidable punch with four 30 mm MK 108 nose-mounted cannons. However, in the P-51 fitted with the Rolls Royce Packard Merlin engine and drop tanks, the USAAF finally had a fighter that had the legs to escort its heavy bombers deep into Reich airspace and back. If flown to its strengths, the P-51 was more than capable of taking on the feared Me 262 on an equal footing despite the differences in power and top speed. Indeed, the Mustang proved to be the Luftwaffe fighter arm's nemesis. When the P-51D sortied over Germany from the summer of 1944 onwards, it shredded through the ill-trained and depleted Gruppen of the Luftwaffe's defence wings. This book examines the two fighters in detail, exploring their history and development and containing accurate descriptions of the combats between the P-51 Mustang and the Me 262 in what were some of the most bitter and large-scale aerial actions fought over Europe in 1944-45.

Shadow over the Atlantic

Robert Forsyth, 2017-07-27 German U boats were the scourge of Allied merchant and military shipping in the Atlantic during World War II threatening to isolate and then starve the UK out of the War As Germany's war against the Allied convoys intensified in late 1943 German Admiral Karl Dönitz called upon the Luftwaffe to provide a long range spotting and shadowing unit to act as eyes for his U boats Equipped with big four engined Junkers Ju 290s fitted out with advanced search radar and other maritime ELINT electronic intelligence devices Fernaufklärungsgruppe FAGr 5 Atlantik undertook a distant isolated campaign far out into the Atlantic and thousands of miles away from its home base in western France The information generated and reported back to Dönitz's headquarters was vital to the efforts of the U boats and FAGr 5's shadowing missions were assigned priority in terms of skilled crews supplies and equipment This book tells for the first time the fascinating story of the formation and operations of FAGr 5 Atlantik drawing on never before published historical records of the unit that accounted for the reporting and destruction of thousands of tons of Allied shipping Jagdverband 44

Robert Forsyth, 2012-01-20 There was no Luftwaffe fighter unit like Jagdverband 44 Formed in February 1945 the unit grew out of Hitler's bizarre decision that the Me 262 jet fighter should be used as a bomber despite its potential in the daylight defensive battles over the Reich Seen as a grave mistake by Göring a small fighter unit was formed in southern Germany to prove the Me 262's ability as an interceptor Formed with some of Germany's most experienced fighter pilots Jagdverband 44 numbered a disproportionately high number of leading aces in its ranks to the extent that it was said that the Knights Cross was the unofficial badge of the unit With numerous first hand accounts from pilots and detailed colour profiles this book is a fascinating account of the dramatic birth of the jet fighter and the impact it had during the bitter struggles of 1944-45

Aces of the Legion Condor Robert Forsyth, 2011-06-21 By the outbreak of World War 2 the Luftwaffe had acquired effective tactical battlefield experience from its involvement in the Spanish Civil War in 1936-1939 centered around the operations conducted by the Legion Condor a force of some 19 000 volunteer German airmen staff technicians and groundcrew formed into fighter bomber reconnaissance Flak weather and signals elements In this new book author Robert Forsyth renowned expert on World War 2 German aviation details the development of both the technologies and the pilots of this German air force with full color illustrations plates and details of color schemes used within the Legion Condor From the He 51 to the Messerschmitt from flying in close wing to wing formations to the looser wider formations common to the Luftwaffe during World War 2 this book is a must have for any German aviation historian or modeler **Mistel** Hans-Peter
