Science and its Publics Alice R. Bell. Sarah R. Davies, Felicity Mellor, 2021-02-03 The relationship between science and its publics has concerned commentators since science itself began Yet in recent years questions of how and how should science and society interact have come to particular prominence A field of practice initially dubbed public understanding of science and later rebranded as public engagement with science and technology has blossomed But although academic studies have informed the development of this practical field to date there has been little opportunity to take stock of the full breadth and variety of academic analyses of science communication In an attempt to reveal the richness of the nascent field of science communication studies this volume presents critical interdisciplinary analyses of some of the many ways in which science intersects with its publics From children's science books to computer advertising news media to lab talk public engagement to science fiction the sites, modes and meanings of public science are explored Contributions draw on historical, cultural, science and media studies All however follow science through popular culture taking critical science studies out of the lab and into society

Relational Planning Monika Kurath, Marko Marskamp, Julio Paulos, Jean Ruegg, 2017-09-19 This volume introduces the notion of relational planning through a collection of theoretical and empirical contributions that explore the making of heterogeneous associations in the planning practice The analytical concept builds on recent approaches to complexity and materiality in planning theory by drawing on Science and Technology Studies STS of urban issues It frames planning as a socio-material practice taking place within the multifaceted relations between artefacts, agency and practices By way of this triad spatial planning is not studied as a given linear or technical process but rather problematized as a hybrid, distributed and situational practice The inquiries in this collection thus describe how planning practices are negotiated and enacted in and beyond formal arenas and procedures of planning and so make visible the many sites, actors and means of spatial planning Addressing planning topics such as ecology, preservation, participation, rebuilding and zoning this volume takes into account

Understanding Trust in Government Scott E. Robinson, James W. Stoutenborough, Arnold Vedlitz, 2017-04-28 Growing disenfranchisement with political institutions and policy processes has generated interest in trust in government For the most part research has focused on trust in government as a general attitude covering all political institutions In this book Scott E Robinson James W Stoutenborough and Arnold Vedlitz argue that individual agencies develop specific reputations that may contrast with the more general attitudes towards government as a whole Grounded in a treatment of trust as a relationship between two actors and taking the Environmental Protection Agency as their subject the authors illustrate that the agency's reputation is explained through general demographic and ideological factors as well as policy domain factors like environmentalism The book presents results from two approaches to assessing trust 1 a traditional attitudinal survey approach and 2 an experimental approach using the context of hydraulic fracturing While the traditional attitudinal survey approach provides traditional answers to what drives trust in the EPA the experimental results reveal that there is little specific trust in the EPA across the United States Robinson Stoutenborough and Vedlitz expertly point the way forward for

more reliable assessments of trust while demonstrating the importance of assessing trust at the agency level This book represents a much needed resource for those studying both theory and methods in Public Administration and Public Policy

Environmental Publics Sally Eden,2016-12-08 How do ordinary people think about the environment as they go about their daily lives Does thinking about the environment make them do things differently This book is the first to explore the idea of environmental publics that is the ways in which ordinary people engage with environmental issues across different practical contexts of work play and home Emphasising the practices of environmental engagement Environmental Publics examines how people consume the environment learn about it campaign for its protection and enjoy it through their leisure time But the book avoids relying on idealisations of consumers or citizens or theoretical constructs about behavioural norms that have traditionally dominated research in this field Instead this book differentiates environmental publics not by who they are but by what they are doing their daily practices It also analyses specifically the geographies of those practices how what people do affects the environment but in different ways across time and space and at different scales aspects of practices that are neglected in the literature With an interdisciplinary perspective this book will be of interest to students and scholars in geography sociology science and technology studies political science and anthropology It is written in an accessible and readable style so as to be useful for preliminary and more advanced courses in environmental management perception and policy as well as in studies of modern society consumption and environmentalism *Learning and Practice* Patricia Murphy,Kathy Hall,2008-07-18 By examining ideas about learning that transcend typical boundaries such as school workplace or home school this book emphasises the socially negotiated and embedded nature of meaning making and how learners learn to use the cognitive tools of their cultural community through participation in social activity The editors argue that this is the means by which individual agency is extended and learners identities as forms of competency are transformed The book locates sociocultural understanding in a wide theoretical frame and demonstrates its implications for learning and assessment generally covering a range of educational and workplace settings The contributions challenge ways of understanding learning and thinking about practice both teaching and assessment Drawing on the international literature this book is essential reading for students of curriculum learning and assesment in all sectors from pre primary to further and higher education It is suitable as a core text for masters and taught doctorate programmes It will be of interest to a range of professionals involved with curriculum learning and the practice of teaching and assessment It is also relevant to those in work based and professional education and training and informal educational settings A unique collection in a field that is underrepresented it will also be of interest to an acadmeic audience Trames ,2003
