Mixed Mode Modelling Mixing Methodologies For Organisational Intervention:

Mixed-Mode Modelling: Mixing Methodologies For Organisational Intervention M.G. Nicholls, S.A. Clarke, B.

Lehaney, 2013-12-01 The 1980s and 1990s have seen a growing interest in research and practice in the use of methodologies within problem contexts characterised by a primary focus on technology human issues or power During the last five to ten years this has given rise to challenges regarding the ability of a single methodology to address all such contexts and the consequent development of approaches which aim to mix methodologies within a single problem situation This has been particularly so where the situation has called for a mix of technological the so called hard and human centred so called soft methods The approach developed has been termed mixed mode modelling The area of mixed mode modelling is relatively new with the phrase being coined approximately four years ago by Brian Lehaney in a keynote paper published at the 1996 Annual Conference of the UK Operational Research Society Mixed mode modelling as suggested above is a new way of considering problem situations faced by organisations Traditional technological approaches used in management science have suffered criticisms relating to their adequacy in the past few decades and these hard approaches have been replaced by soft methods which consider process more relevant than outcome However the sole use of human centred approaches to organisational problems has also proved to be inadequate Mixed mode modelling accepts the importance of both process and outcome and provides enabling mechanisms for hard and soft investigation to be undertaken

Issues of Human Computer Interaction Anabela Sarmiento, 2005-01-01 Human Computer Interaction HCI has its roots in the main areas of industrial engineering human factors and cognitive psychology with the focus on the development of user friendly IT Traditionally the research in this area has emphasised the technological aspect of this relationship the Computer More recently other aspects concerning the organizational social and human context also began to be considered the Human Today one can say that any attempt to facilitate the relationship between the machine and the user must consider not only the technological perspective e g promote the usability but also for instance the way the user is going to use the technology and his or her purpose as well as the social and cultural context of this use the Human and the Computer

The book discusses a new approach to the classification problem following the decision support orientation of multicriteria decision aid The book reviews the existing research on the development of classification methods investigating the corresponding model development procedures and providing a thorough analysis of their performance both in experimental situations and real world problems from the field of finance Audience Researchers and professionals working in management science decision analysis operations research financial banking analysis economics statistics computer science as well as graduate students in management science and operations research **Non-Connected Convexities and Applications** G. Cristescu, L.

Lupsa, 2013-12-01 Lectori salutem The kind reader opens the book that its authors would have liked to read it themselves but it was not written yet Then their only choice was to write this book to fill a gap in the mathematical literature The idea of convexity has appeared in the human mind since the antiquity and its fertility has led to a huge diversity of notions and of applications A student intending a thoroughgoing study of convexity has the sensation of swimming into an ocean It is due to two reasons the first one is the great number of properties and applications of the classical convexity and second one is the great number of generalisations for various purposes As a consequence a tendency of writing huge books guiding the reader in convexity appeared during the last twenty years for example the books of P M Gruber and J M Willis 1993 and R J Webster 1994 Another last years tendency is to order from some point of view as many convexity notions as possible for example the book of I Singer 1997 These approaches to the domain of convexity follow the previous point of view of axiomatizing it A

Ghika 1955 W Prenowitz 1961 D Voiculescu 1967 V W Bryant and R J Webster 1969 Following this last tendency our book proposes to the reader two classifications of convexity properties for sets both of them starting from the internal mechanism of defining them

Operations Research in Space and Air Tito A. Ciriani, G. Fasano, S. Gliozzi, Roberto Tadei, 2013-04-18

Operations Research in Space and Air is a selection of papers reflecting the experience and expertise of international OR consulting companies and academic groups The global market and competition play a crucial part in the decision making processes within the Space and Air industries and this book gives practical examples of how advanced applications can be used by Space and Air industry management The material within the book provides both the basic background for the novice modeler and a useful reference for experienced modelers Students researchers and OR practitioners will appreciate the details of the modeling techniques the processes that have been implemented and the computational results that demonstrate the benefits in applying OR in the Space and Airline industries Advances in PC and Workstations technology in optimization engines and in modeling techniques now enable solving problems never before attained by Operations Research In recent years the Italian OR Society AfRO www.airo.org has organized annual forums for researchers and practitioners to meet together to present and discuss the various scientific and technical OR achievements The OR in Space & Air session of AfRO2001 and AfRO2002 Conferences together with optimization tools applications presented recent results achieved by Alenia Spazio S.p.A Turin Alitalia Milan Polytechnic and Turin Polytechnic With additional contributions from academia and industry they have enabled us to capture in print today's state of the art optimization and data mining solutions

Trends in Industrial and Applied Mathematics Abul Hasan Siddiqi, M. Kocvara, 2013-12-01 An important objective of the study of mathematics is to analyze and visualize phenomena of nature and real world problems for its proper understanding Gradually it is also becoming the language of modern financial instruments To project some of these developments the conference was planned under the joint auspices of the Indian Society of Industrial and Applied mathematics ISIAM and Guru Nanak Dev University G.N.D.U Amritsar India Dr Pammy Manchanda chairperson of Mathematics Department G.N.D.U was appointed the organizing secretary and an organizing committee was constituted The Conference was scheduled in World Mathematics Year 2000 but due one reason or the other it could be held during 22-25 January 2001 However keeping in view the suggestion of the International Mathematics union we organized two symposia Role of Mathematics in industrial development and vice versa and How image of Mathematics can be improved in public These two symposia aroused great interest among the participants and almost everyone participated in the deliberations The discussion in these two themes could be summarized in the lengthy following lines Tradition of working in isolation is a barrier for interaction with the workers in the other fields of science and engineering what to talk of non academic areas specially the private sector of finance and industry Therefore it is essential to build bridges within institutions and between institutions

Generalized Optimal Control of Linear Systems with Distributed Parameters S.I. Lyashko, 2005-12-27 The author of this book made an

attempt to create the general theory of optimization of linear systems both distributed and lumped with a singular control The book touches upon a wide range of issues such as solvability of boundary value problems for partial differential equations with generalized right hand sides the existence of optimal controls the necessary conditions of optimality the controllability of systems numerical methods of approximation of generalized solutions of initial boundary value problems with generalized data and numerical methods for approximation of optimal controls In particular the problems of optimization of linear systems with lumped controls pulse point pointwise mobile and so on are investigated in detail

Biodiversity Wilhelm Barthlott, Matthias Winiger, 1998-03-18 The preservation of biodiversity is an essential part of the global concept for sustainable development Ecologically and socially acceptable management of biodiversity is a prerequisite for the preservation of the wealth and productivity of natural ecological systems and maintenance of the cultural differences in the relationship between man and nature The Agenda 21 adopted at the Rio Summit in 1992 calls for concerted action by governments governmental and non governmental organizations and the scientific community for the preservation of biodiversity

Financial Engineering, E-commerce and Supply Chain Panos M. Pardalos, Vassilis Tsitsiringos, 2013-06-29 One of the fast growing elements of the Internet is electronic commerce which refers to the use of electronic means to conduct business transactions within or across business entities Nearly 80 percent of all Fortune 500 companies have been doing their core business through the Internet Many issues and societal implications of electronic commerce are the subjects of recent research A supply chain consists of all the entities and activities that enable the production distribution and delivery of products and services to consumers Research in designing and managing supply chains has rapidly expanded during the last decade In addition increased and accessible computing power and modeling capabilities have spurred this growth enabling researchers to simultaneously consider the many interrelated variables and decisions of a supply chain in a single tractable model

Numerical Data Fitting in Dynamical Systems Klaus Schittkowski, 2013-06-05 Real life phenomena in engineering natural or medical sciences are often described by a mathematical model with the goal to analyze numerically the behaviour of the system Advantages of mathematical models are their cheap availability the possibility of studying extreme situations that cannot be handled by experiments or of simulating real systems during the design phase before constructing a first prototype Moreover they serve to verify decisions to avoid expensive and time consuming experimental tests to analyze understand and explain the behaviour of systems or to optimize design and production As soon as a mathematical model contains differential dependencies from an additional parameter typically the time we call it a dynamical model There are two key questions always arising in a practical environment 1 Is the mathematical model correct 2 How can I quantify model parameters that cannot be measured directly In principle both questions are easily answered as soon as some experimental data are available The idea is to compare measured data with predicted model function values and to minimize the differences over the whole parameter space We have to reject a model if we are unable to find a

reasonably accurate fit To summarize parameter estimation or data fitting respectively is extremely important in all practical situations where a mathematical model and corresponding experimental data are available to describe the behaviour of a dynamical system

Cooperative Control and Optimization Robert Murphey, Panos M. Pardalos, 2006-04-18 A cooperative system is defined to be multiple dynamic entities that share information or tasks to accomplish a common though perhaps not singular objective Examples of cooperative control systems might include robots operating within a manufacturing cell unmanned aircraft in search and rescue operations or military surveillance and attack missions arrays of micro satellites that form a distributed large aperture radar employees operating within an organization and software agents The term entity is most often associated with vehicles capable of physical motion such as robots automobiles ships and aircraft but the definition extends to any entity concept that exhibits a time dependent behavior Critical to cooperation is communication which may be accomplished through active message passing or by passive observation It is assumed that cooperation is being used to accomplish some common purpose that is greater than the purpose of each individual but we recognize that the individual may have other objectives as well perhaps due to being a member of other caucuses This implies that cooperation may assume hierarchical forms as well The decision making processes control are typically thought to be distributed or decentralized to some degree For if not a cooperative system could always be modeled as a single entity The level of cooperation may be indicated by the amount of information exchanged between entities Cooperative systems may involve task sharing and can consist of heterogeneous entities Mixed initiative systems are particularly interesting heterogeneous systems since they are composed of humans and machines Finally one is often interested in how cooperative systems perform under noisy or adversary conditions In December 2000 the Air Force Research Laboratory and the University of Florida successfully hosted the first Workshop on Cooperative Control and Optimization in Gainesville Florida This book contains selected refereed papers summarizing the participants research in control and optimization of cooperative systems Audience Faculty graduate students and researchers in optimization and control computer sciences and engineering

Semidefinite programming has been described as linear programming for the year 2000 It is an exciting new branch of mathematical programming due to important applications in control theory combinatorial optimization and other fields Moreover the successful interior point algorithms for linear programming can be extended to semidefinite programming In this monograph the basic theory of interior point algorithms is explained This includes the latest results on the properties of the central path as well as the analysis of the most important classes of algorithms Several classic applications of semidefinite programming are also described in detail These include the Lov sz theta function and the MAX CUT approximation algorithm by Goemans and Williamson Audience Researchers or graduate students in optimization or related fields who wish to learn more about the theory and applications of semidefinite programming **Optimization Theory** F. Giannessi, Panos M. Pardalos, Tamás Rapcsák, 2013-12-01 This volume contains refereed papers based on the lectures presented at the XIV International Conference on Mathematical Programming held at Matrahaza Hungary between 27 31 March 1999 This conference was organized by the Laboratory of Operations Research and Decision Systems at the Computer and Automation Institute Hungarian Academy of Sciences The editors hope this volume will contribute to the theory and applications of mathematical programming As a tradition of these events the main purpose of the conference was to review and discuss recent advances and promising research trends concerning theory algorithms and applications in different fields of Optimization Theory and related areas such as Convex Analysis Complementarity Systems and Variational Inequalities The conference is traditionally held in the Matra Mountains and housed by the resort house of the Hungarian Academy of Sciences This was the 14th event of the long lasting series of conferences started in 1973 The organizers wish to express their thanks to the authors for their contributions in this volume and the anonymous referees for their valuable comments Special thanks are directed to our sponsors the Hungarian Academy of Sciences the National Committee for Technological Development the Hungarian National Science Foundation and last but not least the Hungarian Operational Research Society We would like to thank John Martindale from Kluwer Academic Publishers for helping us produce this volume Eva Nora Nagy for corrections and proof readings and Peter Dombi for his excellent work on typesetting and editing the manuscript
