*Mobile IP* Abdul Sakib Mondal, 2012-12-06 *Mobile IP Present State and Future* is an up to date introduction to the rapidly evolving field of mobile IP In addition to detailed coverage of motivation behind mobile IP and fundamental concepts of mobile IP like agent advertisement and discovery registration and tunneling the book provides a comprehensive treatment of various associated technical issues such as security TCP performance multicasting and integration with wireless The book has been written to serve as a text for network professionals who are yearning to acquire a clear understanding of this interesting field

**Mobile IP** Abdul Sakib Mondal, 2003-10-31 *Context-Aware Mobile and Ubiquitous Computing for Enhanced Usability: Adaptive Technologies and Applications* Stojanovic, Dragan, 2009-04-30 Provides research developments on mobile technologies and services Explains how users of such applications access intelligent and adaptable information services maximizing convenience and minimizing intrusion

Soft Real-Time Systems: Predictability vs. Efficiency Giorgio C Buttazzo, Giuseppe Lipari, Luca Abeni, Marco Caccamo, 2006-07-02 Hard real time systems are very predictable but not sufficiently flexible to adapt to dynamic situations They are built under pessimistic assumptions to cope with worst case scenarios so they often waste resources Soft real time systems are built to reduce resource consumption tolerate overloads and adapt to system changes They are also more suited to novel applications of real time technology such as multimedia systems monitoring apparatuses telecommunication networks mobile robotics virtual reality and interactive computer games This unique monograph provides concrete methods for building flexible predictable soft real time systems in order to optimize resources and reduce costs It is an invaluable reference for developers as well as researchers and students in Computer Science

*Mobile IP* Abdul Sakib Mondal, 2003 *Mobile IP Present State and Future* is an up to date introduction to the rapidly evolving field of mobile IP In addition to detailed coverage of motivation behind mobile IP and fundamental concepts of mobile IP like agent advertisement and discovery registration and tunneling the book provides a comprehensive treatment of various associated technical issues such as security TCP performance multicasting and integration with wireless The book has been written to serve as a text for network professionals who are yearning to acquire a clear understanding of this interesting field It also covers ongoing research on possible ways to mitigate the challenges and issues associated with mobile IP This makes the book a good reference for advanced readers as well as researchers in the field Network system developers and administrators will find this book useful due to discussions on applications of mobile IP in the real world and management of mobile IP Last but not least the book delineates possible future directions of mobile IP a topic that will be of interest to a large section of network professionals and researchers The book contains a large number of examples illustrations and notes to make the presentation simple and interesting The book should be relevant for courses on advanced networking mobile computing and similar topics

Nearest Neighbor Search: Apostolos N. Papadopoulos, Yannis Manolopoulos, 2006-11-22 Modern applications are both data and computationally intensive and require the storage and

manipulation of voluminous traditional alphanumeric and nontraditional data sets images text geometric objects time series Examples of such emerging application domains are Geographical Information Systems GIS Multimedia Information Systems CAD CAM Time Series Analysis Medical Information Systems On Line Analytical Processing OLAP and Data Mining These applications pose diverse requirements with respect to the information and the operations that need to be supported From the database perspective new techniques and tools therefore need to be developed towards increased processing efficiency This monograph explores the way spatial database management systems aim at supporting queries that involve the space characteristics of the underlying data and discusses query processing techniques for nearest neighbor queries It provides both basic concepts and state of the art results in spatial databases and parallel processing research and studies numerous applications of nearest neighbor queries

Dynamic Reconfiguration Ramachandran Vaidyanathan, Jerry Trahan, 2007-06-30 Dynamic Reconfiguration Architectures and Algorithms offers a comprehensive treatment of dynamically reconfigurable computer architectures and algorithms for them The coverage is broad starting from fundamental algorithmic techniques ranging across algorithms for a wide array of problems and applications to simulations between models The presentation employs a single reconfigurable model the reconfigurable mesh for most algorithms to enable the reader to distill key ideas without the cumbersome details of a myriad of models In addition to algorithms the book discusses topics that provide a better understanding of dynamic reconfiguration such as scalability and computational power and more recent advances such as optical models run time reconfiguration on FPGA and related platforms and implementing dynamic reconfiguration The book featuring many examples and a large set of exercises is an excellent textbook or reference for a graduate course It is also a useful reference to researchers and system developers in the area
