

Diffusivity

- Diffusion refers to the random motion of molecules due to intermolecular collision.
- Even though the collisions between molecules are random in nature, the net migration of molecules takes place from a high concentration to a low concentration zone.
- The diffusivity or diffusion coefficient is a measure of the molecules tendency to diffuse, i.e. the greater the diffusion coefficient, the greater is its mobility in response to a concentration differential.
- Diffusivity is an important parameter in most bioseparation processes since it affects material transport.
- Table 2.3 lists the diffusivities of some biological subs.
