Spatio-Temporal Modeling and Device Optimization of Passively Mode-Locked Semiconductor Lasers Stefan Meinecke, 2022-03-26 This thesis investigates passively mode locked semiconductor lasers by numerical methods The understanding and optimization of such devices is crucial to the advancement of technologies such as optical data communication and dual comb spectroscopy The focus of the thesis is therefore on the development of efficient numerical models which are able both to perform larger parameter studies and to provide quantitative predictions Along with that visualization and evaluation techniques for the rich spatio temporal laser dynamics are developed these facilitate the physical interpretation of the observed features The investigations in this thesis revolve around two specific semiconductor devices namely a monolithically integrated three section tapered quantum dot laser and a V shaped external cavity laser In both cases the simulations closely tie in with experimental results which have been obtained in collaboration with the TU Darmstadt and the ETH Zurich Based on the successful numerical reproduction of the experimental findings the emission dynamics of both lasers can be understood in terms of the cavity geometry and the active medium dynamics The latter in particular highlights the value of the developed simulation tools since the fast charge carrier dynamics are generally not experimentally accessible during mode locking operation Lastly the numerical models are used to perform laser design explorations and thus to derive recommendations for further optimizations

Mixed-Mode Official Surveys Barry Schouten, Jan van den Brakel, Bart Buelens, Deirdre Giesen, Annemieke Luiten, Vivian Meertens, 2021-09-27 Mixed mode surveys have become a standard at many statistical institutes However the introduction of multiple modes in one design goes with challenges to both methodology and logistics Mode specific representation and measurement differences become explicit and demand for solutions in data collection design questionnaire design and estimation This is especially true when surveys are repeated and are input to long time series of official statistics So how can statistical institutes deal with such changes What are the origins of mode specific error And how can they be dealt with In this book the authors provide answers to these questions and much more Features Concise introduction to all the key elements of mixed mode survey design and analysis Realistic official statistics examples from three general population surveys Suitable for survey managers and survey statisticians alike An overview of mode specific representation and measurement errors and how to avoid reduce and adjust them

Saltzman,2014-03-18 First published in 1978 Since World War II the field of perception has developed in two major directions The first evolved out of the traditional psychophysical approach and is manifest today in the new psychophysics The second direction is in the increasing bond between the fields of perception and cognition This volume grew out of the context of this second direction a particular product of two workshops held in the Spring of 1974 and 1975 organized by the Committee on Cognitive Research of the Social Science Research Council The Committee on Cognition was organized in 1971 to encourage communication and interaction on specific problems in the area of cognition among the various social sciences

Millimeter-Wave Radio-over-Fiber Links based on Mode-Locked Laser Diodes Brendel, Friederike,2014-05-14 Radio communications in the range of 60 GHz enable multi Gigabit s network access in indoor environments Due to the propagation characteristics of such signals only very short range radio transmission is feasible In order to distribute these signals across large distances analog transmission over optical fiber is considered In this work mode locked laser diodes serve as optoelectronic oscillators for the generation of such signals Their system relevant properties are studied in detail **Dynamic Mode Decomposition** J. Proctor,2016-11-23 Data driven dynamical systems is a burgeoning field it connects how measurements of nonlinear dynamical systems and or complex systems can be used with well established methods in dynamical systems theory This is a critically important new direction because the governing equations of many problems under consideration by practitioners in various scientific fields are not typically known Thus using data alone to help derive in an optimal sense the best dynamical system representation of a given application allows for important new insights The recently developed dynamic mode decomposition DMD is an innovative tool for integrating data with dynamical systems theory The DMD has deep connections with traditional dynamical systems theory and many recent innovations in compressed sensing and machine learning Dynamic Mode Decomposition Data Driven Modeling of Complex Systems the first book to address the DMD algorithm

presents a pedagogical and comprehensive approach to all aspects of DMD currently developed or under development blends theoretical development example codes and applications to showcase the theory and its many innovations and uses highlights the numerous innovations around the DMD algorithm and demonstrates its efficacy using example problems from engineering and the physical and biological sciences and provides extensive MATLAB code data for intuitive examples of key methods and graphical presentations

Fracture Mechanics of Metals, Composites, Welds, and Bolted Joints Bahram Farahmand, 2001 In the preliminary stage of designing new structural hardware to perform a given mission in a fluctuating load environment there are several factors that the designer should consider Trade studies for different design configurations should be performed and based on strength and weight considerations among others an optimum configuration selected The selected design must withstand the environment in question without failure Therefore a comprehensive structural analysis that consists of static dynamic fatigue and fracture is necessary to ensure the integrity of the structure Engineers must also consider the feasibility of fabricating the structural hardware in the material selection process During the past few decades fracture mechanics has become a necessary discipline for the solution of many structural problems in which the survivability of structure containing pre existing flaws is of great interest These problems include structural failures resulting from cracks that are inherent in the material or defects that are introduced in the part due to improper handling or rough machining that must be assessed through fracture mechanics concepts Official Gazette of the United States Patent and Trademark Office ,1996

Treatise on Geophysics, Volume 7 David Bercovici, 2010-05-17 Treatise on Geophysics Mantle Dynamics Volume 7 aims to provide both a classical and state of the art introduction to the methods and science of mantle dynamics as well as survey leading order problems both solved and unsolved and current understanding of how the mantle works It is organized around two themes 1 how is mantle convection studied and 2 what do we understand about mantle dynamics to date The first four chapters are thus concerned with pedagogical reviews of the physics of mantle convection laboratory studies of the fluid dynamics of convection relevant to the mantle theoretical analysis of mantle dynamics and numerical analysis and methods of mantle convection The subsequent chapters concentrate on leading issues of mantle convection itself which include the energy budget of the mantle the upper mantle and lithosphere in and near the spreading center mid ocean ridge environment the dynamics of subducting slabs hot spots melting anomalies and mantle plumes and finally geochemical mantle dynamics and mixing Self contained volume starts with an overview of the subject then explores each topic in detail Extensive reference lists and cross references with other volumes to facilitate further research Full color figures and tables support the text and aid in understanding Content suited for both the expert and non expert *Business Statistics (as per NEP-UP, for B.Com, Sem I)* J K Sharma, *Physical Acoustics V7* Warren P. Lure Of Modern Science, The: Fractal Thinking Bill Deering, Bruce J West, 1995-05-31 The authors describe mostly in non technical language the development of a new scientific paradigm based on nonlinear deterministic dynamics and fractal geometry The concepts from these two mathematical disciplines are interwoven with data from the physical social and life sciences In this way rather sophisticated mathematical concepts are made accessible through experimental data from various disciplines and the formalism is relegated to appendices It is shown that the complexity of natural and social phenomena invariably lead to inverse power law distributions both in terms of probabilities and spectra This book tries to show how to think differently about familiar phenomena such as why the bell shape curve ought not to be used in teaching or in the characterization of such complex phenomena as intelligence
