Grants and Awards, 1972 *Interdisciplinarity in the Making* Nancy J. Nersessian, 2022-11-22 A cognitive ethnography of how bioengineering scientists create innovative modeling methods In this first full scale long term cognitive ethnography by a philosopher of science Nancy J Nersessian offers an account of how scientists at the interdisciplinary frontiers of bioengineering create novel problem solving methods Bioengineering scientists model complex dynamical biological systems using concepts methods materials and other resources drawn primarily from engineering They aim to understand these systems sufficiently to control or intervene in them What Nersessian examines here is how cutting edge bioengineering scientists integrate the cognitive social material and cultural dimensions of practice Her findings and conclusions have broad implications for researchers in philosophy science studies cognitive science and interdisciplinary studies as well as scientists educators policy makers and funding agencies In studying the epistemic practices of scientists Nersessian pushes the boundaries of the philosophy of science and cognitive science into areas not ventured before She recounts a decades long wide ranging and richly detailed investigation of the innovative interdisciplinary modeling practices of bioengineering researchers in four university laboratories She argues and demonstrates that the methods of cognitive ethnography and qualitative data analysis placed in the framework of distributed cognition provide the tools for a philosophical analysis of how scientific discoveries arise from complex systems in which the cognitive social material and cultural dimensions of problem solving are integrated into the epistemic practices of scientists Specifically she looks at how interdisciplinary environments shape problem solving Although Nersessian s case material is

drawn from the bioengineering sciences her analytic framework and methodological approach are directly applicable to scientific research in a broader more general sense as well

Origins of Sociological Theory Arris Dorsey &, 2018-11-30 The field of sociology itself and sociological theory by extension is relatively new Both date back to the 18th and 19th centuries The drastic social changes of that period such as industrialization urbanization and the rise of democratic states caused particularly Western thinkers to become aware of society The oldest sociological theories deal with broad historical processes relating to these changes Since then sociological theories have come to encompass most aspects of society including communities organizations and relationships The basic insight of sociology is that human behaviour is largely shaped by the groups to which people belong and by the social interaction that takes place within those groups The main focus of sociology is the group not the individual This compendium offers selections that present special propositions specific concepts or examples of substantive theorizing rather than discussions of integrated systems The present attempt is made to describe the different aspects of sociological theory generally being explained by the social scientists and it is hoped that it will be of great use for all those concerned with sociology
