Nonlinear Phenomena in the Ionosphere A. Gurevich, 2012-12-06 Nonlinear effects in the ionosphere cross modulation of radio waves have been known since the 1930s Only recently however has the rapid increase in the power and directivity of the radio transmitters made it possible to alter the properties of the ionosphere strongly and to modify it artificially by applying radio waves This has revealed a variety of new physical phenomena Their study is not only of scientific interest but also undisputedly of practical interest and is presently progressing very rapidly This monograph is devoted to an exposition of the present status of theoretical research on this problem Particular attention is paid naturally to problems in the development of which the author himself took part It is my pleasant duty to thank V L Ginzburg L P Pitaevskii V V Vas kov E E Tsedilina A B Shvartsburg and Va S Dimant for useful discussions and for valuable remarks during various stages of the work on the problem considered in this book Contents 1 Introduction Peyresq Lectures on Nonlinear Phenomena Freddy Bouchet, 2013 This book is the third volume of lecture notes from summer schools held in the small village of Peyresq France These lectures cover nonlinear physics in a broad sense They were given over the period 2004 to 2008 The summer schools were organized by the Institut Non Lin r aire de Nice Nice France the Laboratoire de Physique Statistique ENS Paris France and the Institut de Recherche de Physique Hors Equilibre Marseilles France The goal of the book is to provide a high quality overview on the state of the art in nonlinear sciences and to promote the transfer of knowledge between the various domains in physics dealing with nonlinear phenomenon **Nonlinear Phenomena in Mathematical Sciences** V. Lakshmikantham, 2014-05-12 Nonlinear Phenomena in Mathematical Sciences contains the proceedings of an International Conference on Nonlinear Phenomena in Mathematical Sciences held at the University of Texas at Arlington on June 16 20 1980 The papers explore trends in nonlinear phenomena in mathematical sciences with emphasis on nonlinear functional analytic methods and their applications nonlinear wave theory and applications to medical and life sciences In the area of nonlinear functional analytic methods and their applications the following subjects are discussed optimal control theory periodic oscillations of nonlinear mechanical systems Leray Schauder degree theory differential inequalities applied to parabolic and elliptic partial differential equations bifurcation theory stability theory in analytical mechanics singular and ordinary boundary value problems etc The following topics in nonlinear wave theory are considered nonlinear wave propagation in a randomly homogeneous media periodic solutions of a semilinear wave equation asymptotic behavior of solutions of strongly damped nonlinear wave equations shock waves and dissipation theoretical methods for a nonlinear Schr dinger equation and nonlinear hyperbolic Volterra equations occurring in viscoelasticity Applications to medical and life sciences include mathematical modeling in physiology pharmacokinetics and neuro mathematics along with epidemic modeling and parameter estimation techniques This book will be helpful to students practitioners and researchers in the field of mathematics **Peyresq Lectures On Nonlinear Phenomena, Volume II**

Jacques-alexandre Sepulchre, Jean-luc Beaumont, 2003-05-20 This book is the second volume of lecture notes on various topics in nonlinear physics delivered by specialists in the field who gave courses in the small village of Peyresq France during summer schools 2000 2001 2002 organised by the Institut Non Lin aire de Nice INLN in collaboration with the Institut de Recherche de Physique Hors Equilibre IRPHE The goal is to provide good summaries on the state of the art of some domains in physics having the common denominator of belonging to nonlinear sciences and to promote the transfer of knowledge between them Mathematics for Nonlinear Phenomena — Analysis and Computation Yasunori Maekawa, Shuichi Jimbo, 2017-11-01 This volume covers some of the most seminal research in the areas of mathematical analysis and numerical computation for nonlinear phenomena Collected from the international conference held in honor of Professor Yoshikazu Giga s 60th birthday the featured research papers and survey articles discuss partial differential equations related to fluid mechanics electromagnetism surface diffusion and evolving interfaces Specific focus is placed on topics such as the solvability of the Navier Stokes equations and the regularity stability and symmetry of their solutions analysis of a living fluid stochastic effects and numerics for Maxwell s equations nonlinear heat equations in critical spaces viscosity solutions describing various kinds of interfaces numerics for evolving interfaces and a hyperbolic obstacle problem Also included in this volume are an introduction of Yoshikazu Giga s extensive academic career and a long list of his published work Students and researchers in mathematical analysis and computation will find interest in this volume on theoretical study for nonlinear phenomena **Nonlinear Phenomena Research Perspectives** Charles W. Wang, 2007 Non linear or chaotic behaviour in real world systems has been reported in electronic circuits and communications systems chemical reactions biological behaviour Applications include solitons integrable systems cellular automata pattern formation qualitative structure and bifurcation theory onset of chaos and turbulence analytic dynamics and transport phenomena This book presents important new research in this dynamic field Peyresq Lectures on Nonlinear Phenomena Jacques-Alexandre Sepulchre, Jean-Luc Beaumont, 2003 This book is the second volume of a compilation of lecture notes on various topics in nonlinear physics delivered by specialists during the summer schools organized by the Institut Non Lin aeaire de Nice in Peyresq since 1998 The first volume edited by R Kaiser and J Montaldi contains courses from the years 1998 and 1999 This volume collects notes of the lectures given from the summers of 2000 2001 and 2002 Preface v 2 *Nonlinear Phenomena And Chaos In Magnetic Materials* Philip E Wigen, 1994-05-06 In this book some of the principal investigators of the phenomena have reviewed their successes The contributions include an overview of the field by H Suhl followed by a detailed review of the high power response of magnetic materials Following that chapter a number of authors review the phenomena for a variety of magnetic materials and pumping configurations In the final chapter evidence of another nonlinear effect is reviewed Using a pulsed driving field it is possible to excite a travelling spin wave The nonlinear contributions will give rise to a bunching effect which compensates for the dispersive effects to produce a shape preserving traveling wave pulse known as solitons Ordered

magnetic materials have provided a rich source for the investigation of nonlinear phenomena. These investigations have contributed much to our knowledge of the behavior of chaotic systems as well as to a better understanding of the high power response of the magnetic materials themselves. *Nonlinear Phenomena in Physics and Biology* Richard H. Enns, 2012-12-06

The Advanced Study Institute (ASI) on Nonlinear Phenomena in Physics and Biology was held at the Banff Centre Banff Alberta Canada from 17-29 August 1980. The Institute was made possible through funding by the North Atlantic Treaty Organization who supplied the major portion of the financial aid, the National Research and Engineering Council of Canada and Simon Fraser University. The availability of the Banff Centre was made possible through the co-sponsorship with NATO of the ASI by the Canadian Association of Physicists. 12 invited lecturers and 82 other participants attended the Institute. Except for two lectures on nonlinear waves by Norman Zabusky which were omitted because it was felt that they already had been exhaustively treated in the available literature, this volume contains the entire text of the invited lectures. In addition, short reports on some of the contributed talks have also been included. The rationale for the ASI and this resulting volume was that many of the hardest problems and most interesting phenomena being studied by scientists today are nonlinear in nature. The nonlinear models involved often span several different disciplines, a simple example being the Volterra type model in population dynamics which has its analogue in nonlinear optics and plasma physics, the 3-wave problem in the discussion of the social behavior of animals and in biological competition and selection at the molecular level.

Noise and Nonlinear Phenomena in Nuclear Systems J.L. Munoz-Cobo, F.C. D'Filippo, 2013-06-29

The main goal of the meeting was to facilitate and encourage the application of recent developments in the physical and mathematical sciences to the analysis of deterministic and stochastic processes in nuclear engineering. In contrast with the rapid growth triggered by computer developments of nonlinear analysis in other branches of the physical sciences, the theoretical analysis of nuclear reactors is still based on linearized models of the neutronics and thermal hydraulic feedback loop, an approach that ignores some intrinsic nonlinearities of the real system. The subject of noise was added because of the importance of the noise technique in detecting abnormalities associated with perturbations of sufficient amplitude to generate nonlinear processes. Consequently, the organizers of the meeting invited a group of leading researchers in the field of noise and nonlinear phenomena in nuclear systems to report on recent advances in their area of research. A selected subgroup of researchers in areas outside the reactor field provided enlightenment on new theoretical developments of immediate relevance to nuclear dynamics theory.
