Pushbutton Fantasies Vincent Mosco, 1982 Cyber-Marx Nick Dyer-Witheford, 1999 In this highly readable and thought provoking work Nick Dyer Witheford assesses the relevance of Marxism in our time and demonstrates how the information age far from transcending the historic conflict between capital and its laboring subjects constitutes the latest battleground in their encounter Dyer Witheford maps the dynamics of modern capitalism showing how capital depends for its operations not just on exploitation in the immediate workplace but on the continuous integration of a whole series of social sites and activities from public health and maternity to natural resource allocation and the geographical reorganization of labor power He also shows how these sites and activities may become focal points of subversion and insurgency as new means of communication vital for the smooth flow of capital also permit otherwise isolated and dispersed points of resistance to connect and combine with one another Cutting through the smokescreen of high tech propaganda Dyer Witheford predicts the advent of a reinvented autonomist Marxism that will rediscover the possibility of a collective communist transformation of society Refuting the utopian promises of the information revolution he discloses the real potentialities for a new social order in the form of a twenty first century communism based on the common sharing of wealth *The Information Society* Robert Hassan, 2013-04-25 What are we to make of the information society Many prominent theorists have argued it to be the most profound and comprehensive transformation of economy culture and politics since the rise of the industrial way of life in the 18th century Some saw its arrival in a positive light where the dreams of democracy of connectivity and efficiency constituted a break with the old ways But other thinkers viewed it more in terms of the recurrent nightmare of capitalism where the processes of exploitation commodification and alienation are given much freer rein than ever before In this book Robert Hassan a prominent theorist in new media and its effects analyses and critically appraises these positions and forms them into a coherent narrative to illuminate the phenomenon Surveying the works of major information society theorists from Daniel Bell to Nicholas Negroponte and from Vincent Mosco to Manuel Castells *The Information Society* is an invaluable resource for understanding the nature of the information society as well as the meta processes of neoliberal globalisation and the revolution in information technologies that made it possible Communication and Conflict Jörg Becker, 2005 Papers presented at various conferences and articles some previously published **Call Centers and the Global Division of Labor** Andrew J.R. Stevens, 2014-03-26 Call centers have come in the last three decades to define the interaction between corporations governments and other institutions and their respective customers citizens and members The offshoring and outsourcing of call center employment part of the larger information technology and information technology enabled services sectors continues to be a growing practice amongst governments and corporations in their attempts at controlling costs and providing new services While incredible advances in technology have permitted the use of distant and offshore labor forces the grander reshaping of an international political economy of communications has allowed for the acceleration of these

processes New and established labor unions have responded to these changes in the global regimes of work by seeking to organize call center workers These efforts have been assisted by a range of forces not least of which is the condition of work itself but also attempts by global union federations to build a bridge between international unionism and local organizing campaigns in the Global South and Global North Through an examination of trade union interventions in the call center industries located in Canada and India this book contributes to research on post industrial employment by using political economy as a juncture between development studies the sociology of work and labor studies Women and Technology Urs E. Gattiker, Rosemarie S. Stollenmaier, 2020-10-12 No detailed description available for Women and Technology **The Political Economy of Information** Vincent Mosco, Janet Wasko, 1988 The information society is real Information as a marketable commodity is quickly taking up the powerful role once held by heavy industry and manufactured products How this revolution is affecting society and how society and government are responding to it is the subject of this book Its lessons and conclusions are of critical importance as we enter the last decade of this century Every dimension of social life whether in the home or the workplace is affected by information and the technologies that give it market value Along with the positive aspects of these broad changes there are inevitable problems the growing gap between the information rich and information poor the need for widespread access to communication and information technology the threat to individual privacy and the potential of the technology to create global instabilities The editors have enlisted specialists and scholars in business communications studies computing and information science economics law library science political science and sociology to examine these changes and problems by looking at information specifically as a commodity to be traded protected and desired **Crossed Wires** Dan Schiller, 2023-02-17 In *Crossed Wires* Dan Schiller who has conducted archival research on US telecommunications for more than forty years recovers the extraordinary social history of the major network systems of the United States from the nineteenth to the twenty first centuries Drawing on arrays of archival documents and secondary sources Schiller reveals that this history has been shaped by sharp social and political conflict and is embedded in the larger history of an expansionary US political economy This authoritative and comprehensive revisionist history of telecommunications argues that business economic and regulatory concerns influenced the evolution of this industry far more than the technology *Communication Yearbook 12* James A. Anderson, 2012-03-22 In *Communication Yearbook 11* major contributions from leading scholars in a variety of communication fields are presented and then critiqued by other authorities often representing complementary or competing schools of thought Topics addressed and commented on include the mass media audience the theory of mediation effective policy for health care communication and feminist criticism of television **Theories of the Information Society** Frank Webster, 2014-03-21 Information is regarded as a distinguishing feature of our world Where once economies were built on industry and conquest we are now part of a global information economy Pervasive media expanding information occupations and the development of the internet convince many that living

in an Information Society is the destiny of us all Coping in an era of information flows of virtual relationships and breakneck change poses challenges to one and all In Theories of the Information Society Frank Webster sets out to make sense of the information explosion taking a sceptical look at what thinkers mean when they refer to the Information Society and critically examining the major post war approaches to informational development The fourth edition of this classic study brings it up to date with new research and with social and technological changes from the Twitter Revolutions of North Africa to financial crises that introduced the worst recession in a life time to the emergence of social media and blogging and reassesses the work of key theorists in the light of these changes More outspoken than in previous editions Webster urges abandonment of Information Society scenarios preferring analysis of the informatization of long established relationships This interdisciplinary book is essential reading for those trying to make sense of social and technological change in the post war era It addresses issues of central concern to students of sociology politics geography communications information science cultural studies computing and librarianship
