## **Putting Science In Its Place Geographies Of Scientific Knowledge:**

*Putting Science in Its Place* David N. Livingstone, 2010-04-15 We are accustomed to thinking of science and its findings as universal After all one atom of carbon plus two of oxygen yields carbon dioxide in Amazonia as well as in Alaska a scientist in Bombay can use the same materials and techniques to challenge the work of a scientist in New York and of course the laws of gravity apply worldwide Why then should the spaces where science is done matter at all David N Livingstone here puts that question to the test with his fascinating study of how science bears the marks of its place of production *Putting Science in Its Place* establishes the fundamental importance of geography in both the generation and the consumption of scientific knowledge using historical examples of the many places where science has been practiced Livingstone first turns his attention to some of the specific sites where science has been made the laboratory museum and botanical garden to name some of the more conventional locales but also places like the coffeehouse and cathedral ship s deck and asylum even the human body itself In each case he reveals just how the space of inquiry has conditioned the investigations carried out there He then describes how on a regional scale provincial cultures have shaped scientific endeavor and how in turn scientific practices have been instrumental in forming local identities Widening his inquiry Livingstone points gently to the fundamental instability of scientific meaning based on case studies of how scientific theories have been received in different locales *Putting Science in Its Place* powerfully concludes by examining the remarkable mobility of science and the seemingly effortless way it moves around the globe From the reception of Darwin in the land of the Maori to the giraffe that walked from Marseilles to Paris Livingstone shows that place does matter even in the world of science

**Book Review: Putting Science in Its Place: Geographies of Scientific Knowledge. By David Livingstone. Chicago: University of Chicago Press 2003. ISBN 0-22648-722-9** Soren C. Larsen, 2005

*The Nationalization of Scientific Knowledge in the Habsburg Empire, 1848-1918* M. Ash, J. Surman, 2012-07-23 This volume challenges the widespread belief that scientific knowledge as such is international Employing case studies from Austria Poland the Czech lands and Hungary the authors show how scientists in the late Habsburg Monarchy simultaneously nationalized and internationalized their knowledge

**A Guide to Spatial History** Konrad Lawson, Riccardo Bavaj, Bernhard Struck, 2022-01-07 This guide provides an overview of the thematic areas analytical aspects and avenues of research which together form a broader conversation around doing spatial history Spatial history is not a field with clearly delineated boundaries For the most part it lacks a distinct unambiguous scholarly identity It can only be thought of in relation to other typically more established fields Indeed one of the most valuable utilities of spatial history is its capacity to facilitate conversations across those fields Consequently it must be discussed in relation to a variety of historiographical contexts Each of these have their own intellectual genealogies institutional settings and conceptual path dependencies With this in mind this guide surveys the following areas territoriality infrastructure and borders nature environment and landscape city and home social space and political protest spaces of

knowledge spatial imaginaries cartographic representations and historical GIS research      The SAGE Handbook of Geographical Knowledge John A Agnew, David N Livingstone, 2011-02-17 A refreshingly innovative approach to charting geographical knowledge A wide range of authors trace the social construction and contestation of geographical ideas through the sites of their production and their relational geographies of engagement This creative and comprehensive book offers an extremely valuable tool to professionals and students alike Victoria Lawson University of Washington A Handbook that recasts geography's history in original thought provoking ways Eschewing the usual chronological march through leading figures and big ideas it looks at geography against the backdrop of the places and institutional contexts where it has been produced and the social cum intellectual currents underlying some of its most important concepts Alexander B Murphy University of Oregon The SAGE Handbook of Geographical Knowledge is a critical inquiry into how geography as a field of knowledge has been produced re produced and re imagined It comprises three sections on geographical orientations geography's venues and critical geographical concepts and controversies The first provides an overview of the genealogy of geography The second highlights the types of spatial settings and locations in which geographical knowledge has been produced The third focuses on venues of primary importance in the historical geography of geographical thought Orientations includes chapters on Geography the Genealogy of a Term Geography's Narratives and Intellectual History Geography's Venues includes chapters on Field Laboratory Observatory Archive Centre of Calculation Mission Station Battlefield Museum Public Sphere Subaltern Space Financial Space Art Studio Botanical Zoological Gardens Learned Societies Critical concepts and controversies includes chapters on Environmental Determinism Region Place Nature and Culture Development Conservation Geopolitics Landscape Time Cycle of Erosion Time Gender Race Ethnicity Social Class Spatial Analysis Glaciation Ice Ages Map Climate Change Urban Rural Comprehensive without claiming to be encyclopedic textured and nuanced this Handbook will be a key resource for all researchers with an interest in the pasts presents and futures of geography      *Imperial Weather* Fiona Williamson, 2025-04-29 Tropical weather in colonial Malaya presented an unknown atmosphere that manifested in extremes and uncertainties From 1840 to 1940 the Indigenous landscapes of Singapore and Penang Islands were altered in ways that will never be reclaimed the natural ecology of much of the peninsula forever changed by the British colonial government With this book Fiona Williamson revisits the fraught relationship between climate weather science and empire within the Straits Settlements in the long nineteenth century Her book examines official and scientific responses to local weathers within the multicultural ports and peripheries of Singapore and George Town Malaysia The challenges of creating a livable environment in tropical conditions she explains frequently pushed the colonial government beyond its capacities and solutions often came at the expense of nature which ironically made managing the weather more problematic *Imperial Weather* offers a deep exploration of various official attempts to understand and apply structure to the previously unknown or uncontrollable through knowledge gathering institutionalization and technological

and infrastructural change Drawing from the history of science especially the history of meteorology and environmental history it explores the multiple interests capacities and capabilities at play including the state of scientific knowledge and the economy funding and importantly socioenvironmental needs and practicalities

**Science, Technology and Society** Giampietro Gobo,Valentina Marcheselli,2023-01-09 Science Technology and Society An Introduction provides students with an accessible overview of the interdisciplinary field of Science and Technology Studies STS The discipline breaks down traditional conceptions of knowledge as universal neutral and ahistorical and takes a more critical approach to science and technology as social embedded phenomena This comprehensive textbook makes use of unique examples and case studies to illustrate theoretical debates and concepts In addition the reader acquires a unique vision of contemporary issues such as the power of algorithms the mystification of fake news the role of experts within the decision making process for example Each chapter incorporates pedagogically rich features including interactive discussion points to be used individually or in class as prompts for debate

**Beyond Borders** Néstor Herran,Tayra Lanuza-Navarro,Josep Simon,2009-05-27 How does scientific knowledge circulate Does scientific communication shape the making of science Is the making of science a national endeavour or does it have an international or transnational dimension Are teaching and research equally relevant in this endeavour How can history of science react to the challenges posed by the changing practices of science in historical context Beyond Borders is a book generated at the heart of these fundamental questions In the last decades the history of science has attained a high degree of disciplinary maturity and sophistication However perception of disciplinary crisis is apparent behind calls for the search of new big pictures and their implementation in teaching and communicating the history of science to wider audiences Temporal and narrative fragmentation are seen as major drawbacks hindering the development of the discipline In addition national linguistic and methodological division is increasingly afflicting its practice Like other areas in the humanities and in contrast to the sciences the history of science has nowadays a pronounced local character which clearly constrains its intellectual output Challenging this state of affairs is a major aim of this book which argues for a resolute call for intellectual and methodological pluralism and internationalism Through a broad diversity of subjects periods and geographies covering from studies of sixteenth century astrological texts to contextual analysis of twentieth century X ray spectroscopy this collection of papers and historiographical essays offers a fresh overview of the field and its major questions Beyond Borders revisits five major topics in history of science namely the early modern map of knowledge pedagogy and science science popularization science and the nation and the geography of scientific centres and peripheries Engaging with a broad diversity of historiographical and methodological approaches in an international perspective Beyond Borders is a rich and plural manifesto contributing to the reflective appraisal of history of science as a discipline

**Science and Religion Around the World** John Hedley Brooke,Ronald L. Numbers,2011-01-11 All too often scholars of science and religion have focused their attention almost exclusively on the Christian experience At a time when religious ignorance and

misunderstanding have lethal consequences such provincialism must be avoided This book expands our knowledge of science and religion beyond its largely Christian base to include the other Abrahamic faiths and the indigenous traditions of Africa and Asia     *Science and Empire* B. Bennett,J. Hodge,2011-09-13 Offering one of the first analyses of how networks of science interacted within the British Empire during the past two centuries this volume shows how the rise of formalized state networks of science in the mid nineteenth century led to a constant tension between administrators and scientists
