Qualitative Theory Of Dynamical Systems:

Qualitative Theory of Dynamical Systems Anthony Michel, Anthony Wang, Bo Hu, Zuhair Nashed, Earl Taft, 2001-01-04 Illuminates the most important results of the Lyapunov and Lagrange stability theory for a general class of dynamical systems by developing topics in a metric space independantly of equations inequalities or inclusions Applies the general theory to specific classes of equations Presents new and expanded material on the stability analysis of hybrid dynamical systems and dynamical systems with discontinuous dynamics

Methods in the Qualitative Theory of Dynamical Systems in Astrophysics and Gas Dynamics O.I. Bogoyavlensky, 1985-08 Homogeneous cosmological models self similar motion of self gravitating gas and motion of gas with homogeneous deformation have important applica tions in the theory of evolution of the universe In particular they can be applied to the theory of explosions of stars formation of galaxies pulsation of alternating stars etc The equations of general relativity and Newtonian gas dynamics in the cases mentioned above are reduced to systems of a finite but quite large number of ordinary differential equations In the last two decades these multi dimensional dynamical systems were and still are being analyzed by means of traditional analytic and numerical methods Important dynamical modes of some solutions were thus established These include oscillatory modes of the space time metric near a cosmological singularity self similar motion of self gravitating gas with a shock wave and an expanding cavity inside as in an explosion of a star collapse of an ellipsoid of self gravitating dust into a disc and others However the multi dimensional dynamical systems in question are so complex that a complete analysis of all dynamical modes of the solutions by means of well known tra ditional analytic methods does not seem feasible Therefore the development of effective methods of qualitative analysis of multi dimensional dynamical systems and their application to the problems of astrophysics and gas dynamics previ ously unsolved by traditional methods becomes especially urgent

Translations of Mathematical Monographs ,1962 *Qualitative Theory of Differentiable Dynamical Systems* Shantao Liao, 1996 *Qualitative Theory of Hybrid Dynamical Systems* Alexey S. Matveev, Andrey V. Savkin, 2012-12-06 Hybrid dynamical systems both continuous and discrete dynamics and variables have attracted considerable interest recently This emerging area is found at the interface of control theory and computer engineering focusing on the analogue and digital aspects of systems and devices They are essential for advances in modern digital controller technology Qualitative Theory of Hybrid Dynamical Systems provides a thorough development and systematic presentation of the foundations and framework for hybrid dynamical systems The presentation offers an accessible but precise development of the mathematical models conditions for existence of limit cycles and criteria of their stability The book largely concentrates on the case of discretely controlled continuous time systems and their relevance for modeling aspects of flexible manufacturing systems and dynamically routed queuing networks Features and topics differential automata development and use of the concept cyclic linear differential automata CLDA switched single server flow networks coverage application to specific models of manufacturing systems and queuing networks select

collection of open problems for the subject self contained presentation of topics with the necessary background This new book is an excellent resource for the study and analysis of hybrid dynamical systems used in systems and control engineering Researchers postgraduates and professionals in control engineering and computer engineering will find the book an up to date development of the relevant new concepts and tools

Qualitative Theory of Dynamical Systems Anthony N. Michel, Kaining Wang, Bo Hu, 2001 Introduces the concept of stability preserving mappings to establish a qualitative equivalence between the two dynamical systems the comparison system and the system to be studied The book sets out to provide insight into dynamical systems unobtainable by usual treatments of the subject electronics mechanical civil aerospace and industrial engineers control theorists physicists computer scientists chemists biologists econometricians operations researchers and upper level undergraduate and graduate students in these disciplines student price which is available on request

Qualitative Theory of Dynamical Systems Dingjun Luo, Libang Teng, 1993 This book deals with the global qualitative behavior of flows and diffeomorphisms It presents a systematic study of the fundamental theory and method of dynamical systems from local behavior near a critical fixed point or periodic orbit to the global such as global structural stability bifurcations and chaos It emphasizes the global non hyperbolicity and introduces some new results obtained by Chinese mathematicians which may not be widely known

Derong Liu, 1993 *Qualitative Theory of Dynamical Systems, Tools and Applications for Economic Modelling* Gian Italo Bischi, Anastasiia Panchuk, Davide Radi, 2016-06-02 The book presents the lectures delivered during a short course held at Urbino University in summer 2015 on qualitative theory of dynamical systems included in the activities of the COST Action IS1104 The EU in the new economic complex geography models tools and policy evaluation It provides a basic introduction to dynamical systems and optimal control both in continuous and discrete time as well as some numerical methods and applications in economic modelling Economic and social systems are intrinsically dynamic characterized by interdependence nonlinearity and complexity and these features can only be approached using a qualitative analysis based on the study of invariant sets equilibrium points limit cycles and more complex attractors together with the boundaries of their basins of attraction which requires a trade off between analytical geometrical and numerical methods Even though the early steps of the qualitative theory of dynamical systems have been in continuous time models in economic and social modelling discrete time is often used to describe event driven often decision driven evolving systems The book is written for Ph D and master s students post doctoral fellows and researchers in economics or sociology and it only assumes a basic knowledge of calculus However it also suggests some more advanced topics
