Quality Of Life And Psychosomatics In Mechanical Circulation In Heart Transplantation:

Quality of Life and Psychosomatics Wolfgang Albert, Anneli Bittner, Roland Hetzer, 2012-12-06 Advances in heart surgical treatment have been impressive in the last 15 years In end stage heart disease procedures are now performed routinely which were only experimental one or two decades ago Heart transplantation has become a well established procedure According to the Gen eral Registry of the International Society of Heart and Lung Transplantation 40 738 heart transplantations had been performed through the end of 1997 with survival rates of 78 % at one year 65 % at five years and 42 % at ten years The progress in this field has been due to intense efforts in understanding and modulating immune responses to the trans planted heart to elaborate therapeutic strategies to constrain infections and to improved out patient care Accordingly heart transplantation is integrated into the facilities of the health care systems the routine of physicians and the awareness of patients The resulting increase in potential organ recipients has not been met however by an equivalent increase of available donor organs This increasing discrepancy has forced the technical improvement and clinical evalua tion of mechanical circulatory support systems as an option for treatment of critically ill patients with a failing heart Initially these assist devices were only used to maintain sufficient circulation in post cardiectomy heart failure until myocardial function had recov ered Since the late 1980s their primary use has been that of bridging patients with heart failure until a suitable organ is available so that heart transplantation can be performed **Mechanical Circulatory Support R.**

Hetzer, E. Henning, M. Loebe, 2012-12-06 After decades of laboratory investigations mechanical circulatory support for the failing heart has entered the clinical arena Today a growing number of patients with progressive myocardial failure awaiting cardiac transplantation is successfully bridged to transplantation with ventricular assist devices The proceedings of the Mechanical Circulatory Support meeting held in Berlin October 21 22 1995 present new aspects of mechanical circulatory support recent experience with MCS in newborns and children using specially developed small devices and the results of long term mechanical assistance The ability of the myocardium to recover under pressure de loading and reduced workload is discussed All these topics open up new perspectives for the use of mechanical circulatory support not only as a bridge to transplantation but also as a definitive approach for treating patients with end stage heart failure Some of these concepts may even provide real alternatives to heart transplantation these being sorely needed in light of the severe donor organ shortage Regulatory as well as ethical aspects of the extended use of mechanical circulatory support systems and new technical developments in the field are discussed by internationally distinguished experts Neuropsychology of Cardiovascular Disease Shari R. Waldstein, Merrill F. Elias, 2001-01-01 Cardiovascular disease the leading cause of morbidity and mortality in the United States and many other countries confers substantial risk for cerebrovascular events such as stroke and vascular dementia The neuropsychological sequelae of such conditions are well documented and can have a devastating impact on individuals quality of life However prior to the development of overt cerebrovascular complications

persons with cardiovascular disease or its risk factors may display mild to severe neuropsychological difficulties Medical and surgical treatments for cardiovascular disease have also been found to affect neuropsychological function This landmark volume offers the first comprehensive overview of the neuropsychological consequences of cardiovascular disease tracking its natural history epidemiology and treatments It encourages researchers and clinicians to consider all relevant facets of vascular disease processes in their evaluation study and treatment of affected patients and indicates a need for primary and secondary prevention efforts Neuropsychology of Cardiovascular Disease will be welcomed as an invaluable resource by neuropsychologists specialists in behavioral medicine neurologists cardiologists epidemiologists gerontologists and many other health professionals whose work brings them into contact with these challenging patients **Mechanical**
