Quality Research in Literacy and Science Education Mack C. Shelley, Larry D. Yore, Brian B. Hand, 2008-12-30

Statistical models attempt to describe and quantify relationships between variables In the models presented in this chapter there is a response variable sometimes called dependent variable and at least one predictor variable sometimes called independent or explanatory variable When investigating a possible cause and effect type of relationship the response variable is the putative effect and the predictors are the hypothesized causes Typically there is a main predictor variable of interest other predictors in the model are called covariates Unknown covariates or other independent variables not controlled in an experiment or analysis can affect the dependent or outcome variable and mislead the conclusions made from the inquiry

Bock Velleman given the model p is the probability that a relationship is seen by mere chance The smaller the p value the more confident we can be that the pattern seen in the data is not random

In the type of models examined here the R measures the proportion of the variation in the response variable that is explained by the predictors specified in the model if R is close to 1 then almost all the variation in the response variable has been explained This measure is also known as the multiple correlation coefficient

Statistical studies can be grouped into two types experimental and observational

Student-Teacher Relationship Quality Research: Past, Present and Future, volume II Claudio Longobardi, Matteo Angelo Fabris, 2024-06-28

Since the publication of Robert Pianta's 2001 handbook on the quality of the teacher student

relationship much has been accomplished and research contributions have multiplied from different authors and countries. This testifies to the richness and continuous evolution of this field of research. The quality of the teacher-student relationship has been recognized as an important factor in the psychological development of students and seems to increase their adjustment to the school context. A good quality of relationship according to attachment theorists is characterized by closeness, affection, and respect. In this direction, the teacher can offer a relational context that can support the child in their learning processes and psychological development, preventing negative outcomes. The research focused on defining the salient features of this educational relationship and refining tools that could collect the perceptions of students and teachers, trying to identify the possible outcomes associated and the mechanisms involved.

Designing, Conducting, and Publishing Quality Research in Mathematics Education Keith R. Leatham, 2019-09-12. The purpose of this book is to collect, organize, and disseminate collective wisdom with respect to designing, conducting, and publishing quality research in mathematics education. This wisdom will be gleaned from among those who over the past several decades have been instrumental in guiding the field in the pursuit of excellence in mathematics education research: insightful editors, educative reviewers, prolific writers, and caring mentors. Each chapter is written to the novice researcher with the intent of aiding them in avoiding common pitfalls, navigating difficult intellectual terrain, and understanding that they are not alone in experiencing rejection, frustration, confusion, and doubt. This book differs from existing literature in the sense that it is written about the enterprise of designing, conducting, and publishing research in mathematics education, as opposed to being reports of the results of such work. It also differs in the sense that it is written with the intent to mentor the rising generation, as opposed to capturing the state of the field as would happen in a handbook, for example. It is written for the express purpose of helping the field work collectively to aid in the often isolated enterprise of mentoring new researchers. The primary audience is a potentially wide one: graduate students, novice researchers, graduate faculty advisors, and mentors, or anyone seeking to improve their own abilities to design, conduct, and publish quality research in mathematics education.
