In its most pervasive and everyday speech, the meaning of the word 'ecology' has become blurred. 'Studies in Ecology' is an internationally based series concerned with ecology as it has long been understood—a distinctive branch of biology dealing with interactions at the whole organism level between organisms and environment.

The series aims at the production of scholarly interpretations of multifaceted topics and critical assessments of newly opened fields presented and written in a manner that will appeal to advanced students and established workers, while at the same time making the materials available to as wide a public as the subjects of the individual volumes allow. It will be concerned with the vital problems of surviving and managing the world's resources as well as with the more academic topics on which the understanding of these problems must be based, but the criteria for publication will always be solid scientific worth.
