Quantitative Videoangiocardiology:

Angiocardiology H. Just, P.H. Heintzen, 2012-12-06 With contributions by numerous experts **Simulation and Imaging of the Cardiac System** S. Sideman, Rafael Beyar, 2012-12-06 The ultrasound velocity tomography allows measurement of cardiac geometries for various phases in the cardiac cycle The present tomograph makes reconstructions at intervals of 20 ms Because of a lack of clear intramural landmarks except the roots of the papillary muscle it is difficult to pinpoint spatial trajectories of particular points in the heart Therefore a second method was developed of injecting radiopaque markers in the heart and following their motion patterns during the cardiac cycle with help of a biplane X ray equipment The data obtained with both methods can be implemented in our finite element model of the heart to compute intramural stresses and strains The results obtained so far with the extended Darcy equation to account for the interaction of blood rheology and tissue mechanics look promising Further testing with more sophisticated subjects than mentioned in Figure 9 is required before it will be implemented in our finite element model of the heart We conclude that analysis of regional cardiac function including regional myocardial blood flow requires still a major research effort but the results obtained so far justify to our opinion a continuation in this direction Acknowledgement The authors acknowledge Dr C Borst and coworkers for doing the animal experiments and prof Van Campen and dr Grootenboer for their participation in some aspects of this work *Advances in Noninvasive Cardiology* J. Meyer, Peter Schweizer, R. Erbel, 2012-12-06 Many noninvasive examination methods of the heart have not held out against the invasive methods which modern cardiac therapy surgically or with catheterization requires They have disappeared completely or are only used by isolated groups of researchers However there is an obvious tendency to apply the invasive procedures as the last diagnostic possibility In the attempt to select clinically relevant methods the expert authors of this book demonstrate that echocardiography expanded with contrast and Doppler has been developed into one of the most important noninvasive methods The results with tissue characterization show that the possibilities of this method have not yet been fully explored Nuclear procedures are widely used although they should only be applied in direct connection with clinical cardiology The new lead methods of the ecg such as ecg mapping show that standard electrocardiography of electrical functions is not yet fully exploited The rapidly developing method of computer tomography is also being applied to cardiology Since nuclear magnetic resonance requires extensive equipment construction its future is as yet unsure Of course a book like this does not intend to treat the subject of noninvasive cardiology in extensive detail Established methods like standard electrocardiography phonocardiography and sphygmography are not discussed The aim of this book is rather to demonstrate the trend of present developments in the field LIST OF CONTRIBUTORS Ameling W Rogowski Institut für Elektronik Rheinisch Westfälische Technische Hochschule Goethestrasse 27 29 D 5100 Aachen FRG Bachmann K Medizinische Poliklinik Universität Erlangen Nürnberg Ostliche Stadtmauerstrasse 29 D 8520 Erlangen FRG **Quantitative Videoangiocardiology** R.P. van Wijk van

Progress in Digital Angiocardiology P.H. Heintzen,J.H. Bürsch,2012-12-06 According to Schopenhauer problems are usually passing through three stages in the first stage they are ignored or just smiled at in the second stage they are fought and in the third stage they are considered to be self evident just taken for granted Whereas digital subtraction angiography DSA has obviously reached stage three of that scale i e routine use in radiology digital angiocardiology in particular imaging the heart and coronary circulation is still on its way to the final goal the filmless heart catheterization laboratory for all invasive and interventional procedures A few pioneers have already completely abandoned the conventional cine coronary and angiocardigraphic technique others as we do still combine both digital and conventional methods in clinical routine but most cardiologists up till now stay sceptically aside We hope that at least some of the articles published in this volume may convince more and more cardiologists that digital imaging procedures are the method of choice in particular if quantitative assessment of the anatomical or functional status of the cardiovascular system is required pre and post operations or pre and post interventions Such a critical control of all therapeutic procedures be it by surgical catheter or medical interventions is indeed an urgent and widely under estimated or neglected requirement

Roentgen-video-techniques for Dynamic Studies of Structure and Function of the Heart and Circulation Paul H. Heintzen,J. H. Bürsch,1978 *Physics and Engineering of Medical Imaging* R. Guzzardi,2012-12-06 The NATO Advanced Study Institute ASI on Physics and Engineering of Medical Imaging has addressed a subject which in the wide area of biomedical technology is one of those which are showing greater impact in the practice of medicine for the ability to picture both Anatomy and Physiology The information and accuracy obtained by whatever imaging methodology is a complex result of a multidisciplinary effort of several sciences

such as Physics Engineering Electronics Chemistry Medicine etc Development has occurred through work performed in different environments such as basic and applied research laboratories industries and clinical centers with the aim of achieving an efficient transfer of know how and technology for the improvement of both investigation possibilities and health care On one hand such an effort requires an ever increasing committment of human and financial resources at research and industrial level and on the other it meets serious difficulties in recruiting the necessary human expertise oriented to this technology which breaks with the tradi tiona I academic borders of the single disciplines Furthermore the scientific community is continually dealing with the problem of increasing the performance and at the same time complexity and costs of instruments applying more and more sophisticated technology in an effort to meet the demand for more complete and accurate clinical information The scientific program of this ASI and the qualification of the authors reveals the intrinsic complexity of the development process of the Imaging methodologies Quantitative Coronary and Left Ventricular Cineangiography Johan H. C. Reiber,P.W. Serruys,C.J. Slager,2012-12-06 In recent years there has been an increasing interest in quantitative analysis of coronary cineangiograms and already for a longer time of left ventricular cin eangiograms The needfor quantitationofcoronary arterialdimensions has been stimulated by the introduction ofnew therapeutic procedures in the catheteriza tionlaboratory suchas the balloon dilatationtechnique PTCA and thromboly tic therapy by the need to study the vasoactive responses of pharmaceutical agents and also by the desire to study the progressive nature ofcoronary artery disease with the ultimate goal to find ways to bring a halt to the progression of coronary atherosclerosis or even achieve regression of the disease Parallel with these clinical developments rapid technical developments in computerarchitect ures and semiconductor memories have made it possible to digitize and store cineframesor selected portions thereof in image processors and to analyze these pictorial data quantitatively at affordable prices More than 15 years of research have been directed by various groups towards the semi or fully automated delineation of the left ventricular boundaries on a frame to frame basis Yet not a single system with fully automated capability is commercially available In the mean time many different left ventricular wall motion models have been developed again with little consensuson which model is to be preferred as no golden standard exists **Cardiac Imaging and Image Processing** Steve M. Collins,David J. Skorton,1986 Cumulated Index Medicus ,1993
