

Towards a More Accurate Theoretical Model of Quark-Gluon Plasma

Relativistic hydrodynamic models study the properties of quark-gluon plasma (QGP), a primordial state of matter that existed in the early universe

However, conventional models cannot explain particle production for very low transverse momentum ($p_T \lesssim 1$ GeV) observed in heavy-ion collision data

Can we find a model that explains the missing particle yield in the region of low transverse momentum?

Simulating Pb-Pb ion collisions using a novel dynamical core-corona initialization framework

Analyses

- Contribution from core and corona components
- Quantification of corona contribution
- Effect of corona component on flow observables

Transverse momentum spectra for 0-5% centrality class

- Dominance of core components
- Stronger domination in heavy particles (protons and anti-protons)

- Significant corona components in $p_T \lesssim 1$ GeV
- Larger in heavy particle spectra (~50% at $p_T = 0$ GeV)

Four-particle cumulants for charged hadrons

Corona contribution dilutes absolute value of c_4 solely from core contribution

Particle yields in the very low p_T spectra can be explained by factoring in the contribution of the nonequilibrium "corona" component in heavy-ion collisions

Quantum Quark:

The Quantum Quark Andrew Watson, 2004-10-07 Publisher Description *Physics of Strong Fields* Walter Greiner, 2013-06-29 The NATO Advanced Study Institute on Physics of Strong Fields was held at Maratea Italy from 1-14 June 1986. The school was devoted to the advances theoretical and experimental in physics of strong fields made during the past five years. The topic of the first week was almost exclusively quantum electrodynamics with discussions of symmetry breaking in the ground state of the physics of strong fields in heavy ion collisions and of precision tests of perturbative quantum electrodynamics. The famous positron lines found at GSI Darmstadt and the related question new particle versus vacuum decay yes or no or both constituted the center of experimental advances. This was followed in the second week by the presentation of a broad range of other areas where strong fields occur reaching from nuclear physics over quantum chromodynamics to gravitation theory and astrophysics. We were fortunate to be able to call on a body of lecturers who not only made considerable personal contributions to this research but who are also noted for their lecturing skills. Their enthusiasm and dedication for their work was readily transmitted to the students resulting in a very successful school.

Zero to Infinity Peter Rowlands, 2007 Unique in its field this book uses a methodology that is entirely new creating the simplest and most abstract foundations for physics to date. The author proposes a fundamental description of process in a universal computational rewrite system leading to an irreducible form of relativistic quantum mechanics from a single operator. This is not only simpler and more fundamental but also seemingly more powerful than any other quantum mechanics formalism available. The methodology finds immediate applications in particle physics, theoretical physics and theoretical computing. In addition, taking the rewrite structure more generally as a description of process, the book shows how it can be applied to large scale structures beyond the realm of fundamental physics.
