Quantum Chaos And Quantum Dots:

Quantum Chaos and Quantum Dots Katsuhiko Nakamura, Takahisa Harayama, 2004 Dynamics of billiard balls and their role in physics have received wide attention Billiards can nowadays be created as quantum dots in the microscopic world enabling one to envisage the so called quantum chaos i.e quantum manifestation of chaos of billiard balls In fact owing to recent progress in advanced technology nanoscale quantum dots such as chaotic stadium and antidot lattices analogous to the Sinai Billiard can be fabricated at the interface of semiconductor heterojunctions This book begins its exploration of the effect of chaotic electron dynamics on ballistic quantum transport in quantum dots with a puzzling experiment on resistance fluctuations for stadium and circle dots Throughout the text major attention is paid to the semiclassical theory which makes it possible to interpret quantum phenomena in the language of the classical world Chapters one to four are concerned with the elementary statistical methods curvature Lyapunov exponent Kolmogorov Sinai entropy and escape rate which are needed for a semiclassical description of transport in quantum dots Chapters five to ten discuss the topical subjects in the field including the ballistic weak localization Altshuler Aronov Spivak oscillation partial time reversal symmetry persistent current Arnold diffusion and Coulomb blockade

Mesoscopic Transport and Quantum Chaos in Ballistic Quantum Dots Michael James Berry, 1994

Quantum Chaos Y2K Karl-Fredrik Berggren, 2001 Quantum chaos is becoming a very wide field that ranges from experiments to theoretical physics and purely mathematical issues In view of this grand span Nobel Symposium 116 focused on experiments and theory and attempted to encourage interplay between them There was emphasis on the interdisciplinary character of the subject involving a broad range of subjects in physics including condensed matter physics nuclear physics atomic physics and elementary particle physics The physics involved in quantum chaos has much in common with acoustics microwaves optics etc and therefore the symposium also covered aspects of wave chaos in this broader sense The program was structured according to the following areas manifestations of classical chaos in quantum systems transport phenomena quantal spectra in terms of periodic orbits semiclassical and random matrix approaches quantum chaos in interacting systems chaos and tunneling wave dynamic chaos This important book constitutes the proceedings of the symposium

Fingerprints in the Optical and Transport Properties of Quantum Dots Ameenah Al-Ahmadi, 2012-06-13 The book Fingerprints in the optical and transport properties of quantum dots provides novel and efficient methods for the calculation and investigating of the optical and transport properties of quantum dot systems This book is divided into two sections In section 1 includes ten chapters where novel optical properties are discussed In section 2 involve eight chapters that investigate and model the most important effects of transport and electronics properties of quantum dot systems This is a collaborative book sharing and providing fundamental research such as the one conducted in Physics Chemistry Material Science with a base text that could serve as a reference in research by presenting up to date research work on the field of quantum dot systems

Physics Of Semiconductors, The - Proceedings Of The 22nd

International Conference (In 3 Volumes) David J Lockwood,1995-01-20 These proceedings review the progress in most aspects of semiconductor physics including those related to materials processing and devices The conference continues the tradition of the ICPS series and these volumes include state of the art lectures The plenary and invited papers address areas of major interest These volumes will serve as excellent material for researchers in semiconductor physics and related fields

Quantum Chaos in Ballistic Dots Sandra Godijn,1999 Low Dimensional Physics and Gauge Principles V. G.

Gurzadyan,A. G. Sedrakyan,2012 This is a collection of articles on fundamental physical principles and methods the topics ranging from matrix models random surfaces quantum dots and rings to black holes cosmology and testing of the tiny effects predicted by General Relativity Among the authors are Sir Roger Penrose and other well known experts and the articles are addressed to graduate students and researchers The volume is a Festschrift to a noted physicist and mentor Sergei Matinyan

A Mathematical Modeling Approach from Nonlinear Dynamics to Complex Systems Elbert E. N.

Macau,2018-06-14 This book collects recent developments in nonlinear and complex systems It provides up to date theoretic developments and new techniques based on a nonlinear dynamical systems approach that can be used to model and understand complex behavior in nonlinear dynamical systems It covers symmetry groups conservation laws risk reduction management barriers in Hamiltonian systems and synchronization and chaotic transient Illustrating mathematical modeling applications to nonlinear physics and nonlinear engineering the book is ideal for academic and industrial researchers concerned with machinery and controls manufacturing and controls Introduces new concepts for understanding and modeling complex systems Explains risk reduction management in complex systems Examines the symmetry group approach to understanding complex systems Illustrates the relation between transient chaos and crises **Non-Linear Dynamics**

and Fundamental Interactions Faqir Khanna,Davron Matrasulov,2006-06-26 This volume contains the papers presented at the NATO Advanced Research Institute on Non Linear Dynamics and Fundamental Interactions held in Tashkent Uzbekistan from Oct 10 16 2004 The main objective of the Workshop was to bring together people working in areas of Fundamental physics relating to Quantum Field Theory Finite Temperature Field theory and their applications to problems in particle physics phase transitions and overlap regions with the areas of Quantum Chaos The other important area is related to aspects of Non Linear Dynamics which has been considered with the topic of chaology The applications of such techniques are to mesoscopic systems nanostructures quantum information particle physics and cosmology All this forms a very rich area to review critically and then find aspects that still need careful consideration with possible new developments to find appropriate solutions There were 29 one hour talks and a total of seven half hour talks mostly by the students In addition two round table discussions were organised to bring the important topics that still need careful consideration One was devoted to questions and unsolved problems in Chaos in particular Quantum Chaos The other round table discussion considered the outstanding problems in Fundamental Interactions There were extensive discussions during the two hours devoted to each

area Applications and development of new and diverse techniques was the real focus of these discussions The conference was ably organised by the local committee consisting of D U **Order and Chaos in Quantum Dots** M. Sokuler,2000
