reason is that in places like Yemen China Korea Taiwan and Thailand the rhino's horn is more valuable than gold so valuable that people will risk their lives to harvest it To deter rhino poachers African governments have spent millions on helicopters paramilitary operations fences and guard dogs even relocation to protected areas Finally Namibia decided to dehorn its rhino population in a last ditch effort to stop the slaughter In 1991 Carol Cunningham and Joel Berger and their eighteen month old daughter Sonja went to Namibia to weigh the effects of dehorning on rhinos In *Horn of Darkness* they tell the story of three years in the Namib Desert studying Africa's last sizable population of free roaming black rhinos This is the closest most readers will come to experiencing life in the remaining wilds of Africa Cunningham and Berger writing nate chapters capture what it is like to leave the comforts of civilization to camp for months at a time in a land filled with deadly predators to study an animal that is reclusive unpredictable and highly dangerous The authors describe staking out water holes in the dead of the night creeping to within twenty seven meters of rhinos to photograph them all the while keeping a lookout for hyenas elephants and lions They recount many heart pounding escapes one rhino forces Carol Cunningham up a tree an unseen lion in hot pursuit of hyenas races right past a frozen Joel Berger and capture the adrenaline rush of inching closer to a rhino that might flee or charge at any moment They also give readers a clear sense of the careful patient work involved in studying animals the frustration of long days without finding rhinos or seeing other people coping with heat and thirst the Namib desert is one of the driest on Earth with dirt and insects driving hundreds of kilometers in a Land Rover packed to capacity slowing amassing records on one hundred individual rhinos over the course of several years And perhaps most important the authors reveal that the data they collected suggests that the dehorning project might backfire that in the four years after dehorning began calf survival was down the evidence suggests that hyenas might be preying on calves and the hornless mothers couldn't defend their offspring They also describe the dark side of scientific work from the petty jealousy of other scientists outside researchers were often seen as ecological imperialists to the controversy that erupted after the authors published their findings as furious officials of the Namibian conservation program denounced their findings and through delays and other tactics effectively withheld a permit to allow the couple to continue their study Weaving together the historical accounts of other naturalists a vividly detailed look at life in the wild and a behind the scenes glimpse of scientific work and the dark side of the conservation movement *Horn of Darkness* is destined to be a classic work on the natural world

Seven Steps from Snowdon to Everest Mark Horrell,2016-02-29 As he teetered on a narrow rock ledge a yak s bellow short of the stratosphere with a rubber mask strapped to his face a pair of mittens the size of a sealion s flippers and a drop of two kilometres below him it s fair to say Mark Horrell wasn t entirely happy with the situation he found himself in He had been an ordinary hiker who had only read books about mountaineering When he signed up for an organised trek in Nepal with a group of elderly ladies little did he know that ten years later he would be attempting to climb the world s highest mountain But as he travelled across the Himalayas Andes Alps and East Africa following in the footsteps of the pioneers he dreamed up a seven point plan to gain the skills and experience which could turn a wild idea into reality Funny incisive and heartfelt his journey provides a refreshingly honest portrait of the joys and torments of a modern day Everest climber

Rick the Rhino Dr. Ross Gordon Cooper,2015-07-18 Rhino occupy a unique part of the food chain and wide niches in specific ecosystems in which they have developed their own behaviour patterns and interactions with other species They form an essential part of the animal kingdom and their loss would have significant ramifications for other dependant flora and fauna The large numbers of rhino orphans and the loss of pregnant females are decimating wild rhino populations This decline is mainly due to poaching for their horns that are made of keratin and which have no proven medical benefit to humans Greedy markets in China Vietnam and Yemen and criminal syndicates offer extremely high prices for rhino horn making it more valuable than gold Whilst tackling the poachers head on is essential it is sadly not enough and vigorous education programmes need to be put in place to inform people of the ecological economic aesthetic and touristic value of rhino This book is dedicated to the plight all rhino species face including museum specimens and fossils
