**Selected Papers** Shizuo Kakutani, 1986-01-01

**Selected Papers of Norman Levinson** J.A. Nohel, D.H.

Sattinger, Gian-Carlo Rota, 1997-12-18 The deep and original ideas of Norman Levinson have had a lasting impact on fields as diverse as differential integral equations harmonic complex stochastic analysis and analytic number theory during more than half a century Yet the extent of his contributions has not always been fully recognized in the mathematics community For example the horseshoe mapping constructed by Stephen Smale in 1960 played a central role in the development of the modern theory of dynamical systems and chaos The horseshoe map was directly stimulated by Levinson's research on forced periodic oscillations of the Van der Pol oscillator and specifically by his seminal work initiated by Cartwright and Littlewood In other topics Levinson provided the foundation for a rigorous theory of singularly perturbed differential equations He also made fundamental contributions to inverse scattering theory by showing the connection between scattering data and spectral data thus relating the famous Gel'fand Levitan method to the inverse scattering problem for the Schrodinger equation He was the first to analyze and make explicit use of wave functions now widely known as the Jost functions Near the end of his life Levinson returned to research in analytic number theory and made profound progress on the resolution of the Riemann Hypothesis Levinson's papers are typically tightly crafted and masterpieces of brevity and clarity It is our hope that the publication of these selected papers will bring his mathematical ideas to the attention of the larger mathematical community

**Selected of Norman Levinson** Norman Levinson, 1998 Norman Levinson 1912-1975 was a mathematician of international repute This collection of his selected papers bears witness to the profound influence Levinson had on research in mathematical analysis with applications to problems in science and technology

**Algebra and Topology by Garrett Birkhoff** J.S. Oliveira, G.-C. Rota, 1987-01-01 The present volume of reprints are what I consider to be my most interesting and influential papers on algebra and topology To tie them together and to place them in context I have supplemented them by a series of brief essays sketching their historical background as I see it In addition to these I have listed some subsequent papers by others which have further developed some of my key ideas The papers on universal algebra lattice theory and general topology collected in the present volume concern ideas which have become familiar to all working mathematicians It may be helpful to make them readily accessible in one volume I have tried in the introduction to each part to state the most significant features of each paper reprinted there and to indicate later developments The background that shaped and stimulated my early work on universal algebra lattice theory and topology may be of some interest As a Harvard undergraduate in 1928-32 I was encouraged to do independent reading and to write an original thesis My tutorial reading included de la Vallée Poussin's beautiful Cours d'Analyse Infinitesimale Hausdorff's Grundzüge der Mengenlehre and Frechet's Espaces Abstraits In addition I discovered Carathéodory's 1912 paper Über das

lineare Mass von Punktmengen and Hausdorff's 1919 paper on Dimension und Ausseres Mass and derived much inspiration from them A fragment of my thesis analyzing axiom systems for separable metrizable spaces was later published 2 This background led to the work summarized in Part IV

**Complex Analysis and Dynamical Systems** Mark Agranovsky, Anatoly Golberg, Fiana Jacobzon, David Shoikhet, Lawrence Zalcman, 2018-01-31 This book focuses on developments in complex dynamical systems and geometric function theory over the past decade showing strong links with other areas of mathematics and the natural sciences Traditional methods and approaches surface in physics and in the life and engineering sciences with increasing frequency the Schramm Loewner evolution Laplacian growth and quadratic differentials are just a few typical examples This book provides a representative overview of these processes and collects open problems in the various areas while at the same time showing where and how each particular topic evolves This volume is dedicated to the memory of Alexander Vasiliev (1988). I. J. Schoenberg, 1988-06 These seleeta contain 761 of the more than 2600 pages of I J Schoenberg's published articles The selection made and the grouping in which the papers are presented here reflect most strongly Schoenberg's wishes The first volume of these seleeta is drawn from Schoenberg's remarkable work on Number Theory Positive Definite Functions and Metric Geometry Real and Complex Analysis and on the Landau Problem Schoenberg's fundamental papers on Total Positivity and Variation Diminution on Pólya Frequency functions and sequences and on Splines especially Cardinal Splines make up the second volume In addition various commentaries have been provided Lettered references in these refer to items listed alphabetically at the end of each commentary Numbered references refer to the list of Schoenberg's publications to be found in each volume Those included in these seleeta are starred It has been an honor to have been entrusted with the editorial work for these seleeta I am grateful to the writers of the various commentaries for their illuminating contributions and to Richard Askey for solid advice

*Studies in Memory of Issai Schur* Anthony Joseph, Anna Melnikov, Rudolf Rentschler, 2012-12-06 This volume *Studies in Memory of Issai Schur* was conceived as a tribute to Schur's of his tragic end His impact on great contributions to mathematics and in remembrance of mathematicians Representation Theory alone was so great that a significant number of Researchers TMR Network in the European Community Training and Mobility Orbits Crystals and Representation Theory in operation during the period 1997-2002 have been occupied with what has been called Schur theory Consequently this volume has the additional purpose of recording some of the significant results of the network It was furthermore appropriate that invited contributors should be amongst the speakers at the Paris Midterm Workshop of the network held at Chevaleret during 21-25 May 2000 as well as those of the Schur Memoriam Workshop held at the Weizmann Institute Rehovot during 27-31 December 2000 The latter marked the sixtieth anniversary of Schur's passing and took place in the 125th year of his birth
