## Abstract

It is noted that achievements by metascience are insufficiently used in the development of the theory of knowledge management including nuclear knowledge. The phenomenon of theory deserves paying special attention because knowledge means the theories mastered by people. There is no such knowledge about subjects and objects, processes or phenomena that would not be the representation of theories. That is why the main provisions of metascience are first disclosed by the author in the present paper and following this they are applied for characterization of 15 important problematic issues of the nuclear knowledge management theory.

Management of intratheoretical concepts, i.e. the principles, laws and variables, is implemented using four methods, namely, deduction, experiment, induction and correction of the original underlying principles. Management of theories is implemented by the use of three methods: problematization, innovation and interpretation. Multiplication of theory management cycles results in the generation of series of interpretative theories. Subject matter of each separate theory is exposed in the composition of the series from the viewpoint of the most well developed concept. Conclusion is made that series of interpretative theories constitute the basic element (unit) of knowledge.

Significant place is occupied in the characterization of outstanding problems of nuclear knowledge management by the correlation between the articulated and practical, as well as between tacit and explicit knowledge. Mechanism is examined for implementation of the discourse leading to the development of the group knowledge. Characteristic is given of the status of competence, skills and hands-on experience of carriers of nuclear knowledge. Approaches to the preservation and development of theories are discussed.

## Introduction

Since 2002 management of nuclear knowledge or, which essentially means the same, administration of nuclear knowledge became one of the priority directions of activities by the International Atomic Energy Agency (IAEA) [1]. Different aspects of the above concept are examined in the series of monograph studies dedicated to the nuclear knowledge management concept (*nuclear knowledge management, NKM*) listed on the IAEA site [2–6] and, in particular, those the methodological aspects of which are of interest for us in the first place [5]. NKM glossary developed within the IAEA framework is opened with the following definition: “Knowl-

edge Management itself is defined as an integrated, systematic approach to identifying, managing and sharing an organisation’s knowledge, and enabling persons to create new knowledge collectively and thereby help achieve the objectives of that organisations. Knowledge Management helps an organization to gain insight and understanding from its own experience. Specific activities in knowledge management help the organization to better acquire, store and utilize knowledge” [6, p. 1]. This definition is forestalled with warning that all definitions used in the glossary refer to knowledge management. It is, however, noted that “The following definitions of terms apply specifically to the field of Knowledge Management. It should be noted that identical terms applied to, or used in, other fields may have somewhat different definitions” [ibidem]. The included elucidation evidences the fact, that nuclear knowledge management is understood as an applied field of knowledge management. However, the well-known collision emerges with this respect. The point is that knowledge management was originally developed as applied to economics,

## **Selected Papers In Foundations Of Nuclea:**

**Selected Papers in Foundations of Nuclear Physics** Robert Thomas Beyer, 1949      Selected Papers in Foundations of Nuclear Physics Robert T. Beyer, 1969\*      Selected Papers on Noise and Stochastic Processes Nelson Wax, 2014-08-20 Six classic papers selected to meet the needs of physicists applied mathematicians and engineers include contributions by S Chandrasekhar G E Uhlenbeck L S Ornstein Ming Chen Wang others 1954 edition      **Frontier Orbitals And Reaction Paths: Selected Papers Of Kenichi Fukui** Hiroshi Fujimoto, Kenich Fukui, 1997-11-26 This book is a collection of selected papers on the Frontier Orbital Theory by Nobel prizewinner Kenichi Fukui Chemistry 1981 with introductory notes It provides the basic concept and formulation of the theory and the physical and chemical significance of the frontier orbital interactions in chemistry together with many practical applications The formulation of the Intrinsic Reaction Coordinate and applications to some simple systems are also presented The aim of this volume is to show by what forces chemical reactions are driven and to demonstrate how the regio and stereo selectivities are determined in chemical reactions Students and senior investigators will gain insight into the nature of chemical reactions and find out how quantum chemical calculations are connected with chemical intuition      Selected Papers of Léon Rosenfeld Robert S. Cohen, J.J. Stachel, 2012-12-06 The decision to undertake this volume was made in 1971 at Lake Como during the Varenna summer school of the Italian Physical Society where Professor Leon Rosenfeld was lecturing on the history of quantum theory We had long been struck by the unique blend of epistemological historical and social concerns in his work on the foundations and development of physics and decided to approach him there with the idea of publishing a collection of his papers He responded enthusiastically and agreed to help us select the papers furthermore he also agreed to write a lengthy introduction and to comment separately on those papers that he felt needed critical re evaluation in the light of his current views For he was still vigorously engaged in both theoretical investigations of and critical not reflections on the foundations of theoretical physics We certainly did conceive of the volume as a memorial to a living saint but rather more practically as a useful tool to place in the hands of fellow workers and students engaged in wrestling with these difficult problems All too sadly fate has added a memorial aspect to our labors We agreed that in order to make this book most useful for the contemporary community of physicists and philosophers we should translate all non English items into English      Spectroscopy With Coherent Radiation: Selected Papers Of Norman F Ramsey (With Commentary) Norman F Ramsey, 1998-06-04 This invaluable volume contains a biography of Nobel laureate Norman F Ramsey as well as reprints and retrospective commentaries on 56 papers relating to spectroscopy with coherent radiation The earliest papers describe his work with I I Rabi developing the then new magnetic resonance method and its uses to measure magnetic moments of the different forms of hydrogen and to discover the deuteron electric quadrupole moment Later papers include his invention of the method of coherent separated oscillatory fields the development of the atomic hydrogen maser and the uses of these methods to measure properties of nucleons nuclei

atoms and molecules and to test parity and time reversal symmetries Other papers present the first successful theories of nuclear magnetic shielding NMR chemical shifts electron coupled nuclear spin spin interactions and negative absolute temperatures      Selected Papers of Robert S. Mulliken Robert S. Mulliken, 1975-08 This book brings together in one volume the most important papers of Robert S Mulliken who was awarded the 1966 Nobel Prize in chemistry for his seminal work on chemical bonds and the electronic structures of molecules The papers collected here range from suggestive to closely detailed analyses of various topics in the theory of spectra and electronic structure of diatomic and polyatomic molecules Professor Mulliken has written introductory commentaries on each of the volume's seven parts Included in the volume are essays of general as well as scientific interest they are grouped under thematic headings Part I contains those papers which are of historical significance An autobiographical piece by Dr Mulliken offers a glimpse of the many famous people whom he has known Also reprinted is the text of his Nobel Prize acceptance speech At the end is a list of his students and other co-workers and a complete bibliography of his papers Part II includes Mulliken's work on band spectra and chemistry as well as his research on the assignment of quantum numbers for electrons in molecules Part III surveys the author's early work on the bonding power of electrons and the method of molecular orbitals Included is a discussion of the structure and spectra of a number of important types of molecules The papers in part IV focus on the intensities of electronic transitions in molecular spectra This incorporates Mulliken's work on charge transfer and the halogen molecule spectra The problems addressed in part V center on the spectra and structure of polyatomic molecules Reprinted here is a report which Mulliken prepared on notation for polyatomic molecules Part VI is devoted to the problem of hyperconjugation These papers develop and apply the concept of hyperconjugation and explore its relation to the concept of conjugation The last part offers some of the most important papers from the author's postwar publications The central focus is on molecular orbital theory the area in which Mulliken's Nobel winning discoveries were made      **Index of Conference Proceedings** British Library.
