Special Issue Devoted to Selected Papers from the 3rd International Conference on Thermal Engineering: Theory and Applications (ICTEA 2007)

The 3rd International Conference on Thermal Engineering: Theory and Applications (ICTEA 2007) was held in Amman, Jordan, May 21–23, 2007. The conference was jointly organized by the Hashemite University (Jordan) and Ryerson University (Canada). More than 150 papers were presented during this event dealing with various issues of thermal engineering. It was a gathering of scientists, researchers and experts from the international scientific community to exchange ideas, research findings, and to pass their experiences on to others.

In this special issue of *Energy Conversion and Management*, 29 papers are published. The articles are extended versions of selected papers presented at ICTEA 2007. In these papers, a great variety of theory and applications in various areas of thermal engineering is presented.

The editors of this special issue would like to thank the authors for their efforts to provide an extended version of their papers. Also, we would like to express our appreciation for the hard work and diligence of the many reviewers that did the additional reviews for *Energy Conversion and Management*. The resulting papers are

a significant enhancement of the conference presentations. We would like to personally thank the Coordinating Editor and Editor-in-Chief of the journal, Jesse C. Denton, for his willingness in allowing us to edit this special issue and for his continuous support during the submission process.

Selected Papers on the Theory of Thermal Convection Barry Saltzman, 1962 [Selected Papers, Volume 3](#) S. Chandrasekhar, 1989-10-23 This is the third of six volumes collecting significant papers of the distinguished astrophysicist and Nobel laureate S Chandrasekhar His work is notable for its breadth as well as for its brilliance his practice has been to change his focus from time to time to pursue new areas of research The result has been a prolific career full of discoveries and insights some of which are only now being fully appreciated Chandrasekhar has selected papers that trace the development of his ideas and that present aspects of his work not fully covered in the books he has periodically published to summarize his research in each area This volume is divided into four sections The first on dynamical friction and Brownian motion includes papers written after Chandrasekhar published his 1942 monograph Principles of Stellar Dynamics Also in this section is Stochastic Problems in Physics and Astronomy one of the most cited papers in the physics literature as well as papers written jointly with John von Neumann that have been given impetus to recent research As Chandrasekhar notes the papers in the second section on statistical problems in astronomy were influenced by Ambartsumian's analysis of brightness

in the Milky Way A third section on the statistical theory of turbulence addresses issues still unresolved in fluid dynamics and the last section is devoted to hydromagnetic problems in astrophysics that are not discussed in Chandrasekhar's monographs
