Selected Works of Phillip A. Griffiths with Commentary Phillip Griffiths, Maurizio Cornalba, 2003 Over the last four decades Phillip Griffiths has been a central figure in mathematics During this time he made crucial contributions in several fields including complex analysis algebraic geometry and differential systems His books and papers are distinguished by a remarkably lucid style that invites the reader to understand not only the subject at hand but also the connections among seemingly unrelated areas of mathematics Even today many of Griffiths's papers are used as a standard source on a subject Another important feature of Griffiths's writings is that they often bring together classical and modern mathematics The four parts of *Selected Works* Analytic Geometry Algebraic Geometry Variations of Hodge Structures and Differential Systems are organized according to the subject matter and are supplemented by Griffiths's brief but extremely illuminating personal reflections on the mathematical content and the times in which they were produced Griffiths's *Selected Works* provide the reader with a panoramic view of important and exciting mathematics during the second half of the 20th century

Collected Works of William P. Thurston with Commentary Benson Farb, David Gabai, Steven P. Kerckhoff, 2023-06-08

William Thurston's work has had a profound influence on mathematics. He connected whole mathematical subjects in entirely new ways and changed the way mathematicians think about geometry, topology, foliations, group theory, dynamical systems, and the way these areas interact. His emphasis on understanding and imagination in mathematical learning and thinking are integral elements of his distinctive legacy. This four-part collection brings together in one place Thurston's major writings, many of which are appearing in publication for the first time. Volumes I-III contain commentaries by the Editors. Volume IV includes a preface by Steven P. Kerckhoff. Volume III contains William Thurston's papers on dynamics and computer science and papers written for general audiences. Additional miscellaneous papers are also included, such as his 1967 New College undergraduate thesis, which foreshadows his later work. *The Selected Works of Phillip A. The Selected Works of Phillip A. Griffiths with Commentary: Algebraic cycles (2003-2007) Phillip Griffiths, 2003 **The Selected Works of Phillip A. Griffiths with Commentary: Algebraic cycles (2003-2007)** Phillip Griffiths, 2003 **Selected Papers of Alberto P. Calderon with Commentary** Alberto P. Calderón, 2008

Alberto Calderon was one of the leading mathematicians of the twentieth century. His fundamental pioneering work reshaped the landscape of mathematical analysis. This volume presents a wide selection from some of Calderon's most influential papers. They range from singular integrals to partial differential equations, from interpolation theory to Cauchy integrals on Lipschitz curves, from inverse problems to ergodic theory. The depth, originality, and historical impact of these works are vividly illustrated by the accompanying commentaries by some of today's leading figures in analysis. In addition, two biographical chapters preface the volume. They discuss Alberto Calderon's early life and his mathematical career. *The Selected Works of Sigurdur Helgason* Sigurdur Helgason, 2009. Collects the articles that cover invariant differential operators, geometric properties of solutions to differential equations on symmetric spaces, double fibrations in integral geometry, spherical functions and spherical transforms, duality for symmetric spaces, representation theory, and the Fourier transform on G/K . *Selected Works of Philip A.
