Selection and Evaluation of Advanced Manufacturing Technologies Matthew J. Liberatore, 2012-12-06 Matthew J. Liberatore Department of Management Villanova University Villanova PA 19085 1 BACKGROUND The weakening competitive position of many segments of u s manufacturing has been analyzed debated and discussed in corporate boardrooms academic journals and the popular literature One result has been a renewed commitment toward improving productivity and quality in the workplace The drive to reduce manufacturing related costs while meeting ever changing customer needs has led many firms to consider more automated and flexible manufacturing systems The extent to which these new technologies can support business goals in productivity quality and flexibility is an especially important issue for manufacturing firms in the u s and other Western nations Problems have arisen in developing performance measures and evaluation criteria which reflect the full range of costs and benefits associated with these technologies Some would argue that managerial policies and attitudes and not the shortcomings of the equipment or manufacturing processes are the major impediments to implementation Kaplan 1984

Achieving Competitive Edge David Bennett, Colin Lewis, 2012-12-06 There is now a widely accepted view among manufacturing and service organisations that operations can provide the means of achieving competitive edge The OMA UK Sixth International Conference has taken this view as its theme and focuses in particular on how technology and people can be used to improve manufacturing and service competitiveness These proceedings have been organised according to the topics addressed within the overall conference theme and generally fall within three broad areas technology based topics human resource based topics and general topics The technology based topics are Materials Control Supply Chain Management and Logistics Flexibility in Operations Systems Computer Aided Management of Operations Design Process Planning and Time to Market Factors Application of KBS Expert Systems and Modelling Production Planning and Control The human resource based topics are

Work Organisation Human Factors Managing the Implementation of Technology Managing the Quality Improvement Process Education Training and Development Employee Participation and Involvement The general topics are Operations Strategy International Comparisons and Country based Papers Performance and Productivity Measurement and Improvement A particular feature of all the papers is that they emphasise the application of techniques technologies and concepts rather than concentrating on specific functional description The authors are drawn from around 14 countries and represent both the academic and industrial communities Many are involved in the mainstream of operations management while a number are from other disciplines relevant to the conference theme such as industrial engineering and organisational behaviour

Advanced Manufacturing Technologies Gopal Prasad Sinha, 2007 Contributed papers presented at the conference organized by Central Mechanical Engineering Research Institute **Principles of Efficient Information Management** August-Wilhelm Scheer, 2012-12-06 The first edition of this book appeared in the Federal Republic of Germany in 1984 and in English translation as *Computer A Challenge for Business Administration* in 1985 This book which is a translation of the fourth German edition has been comprehensively revised As a result both the character and the expected audience of the book have changed which is reflected in the alteration to the title This book addresses itself to issues arising from the research areas of both information systems and computer science Computer science departments are primarily concerned with the development of EDP techniques and the business economics aspects remain largely Ignored The emphasis in information systems departments is placed on the investigation of the business economic impact of the use of already existing systems This strongly empirical approach is accompanied by a disinclination to consider actual system design this is considered the responsibility of the software houses This partitioning however leaves untapped the considerable potential which could be realized by an interdisciplinary approach from computer science and business economics An isolated approach neglects both the effects that business economics can have on the implementation of EDP techniques and the structural impact of EDP on business economics **Neutrosophic Sets and Systems, Book Series, Vol. 31, 2020. Parsaei, A. Mital, 2012-12-06 The 1980s have witnessed a tremendous growth in the field of computer integrated manufacturing systems The other major areas of development have been computer aided design computer aided manufacturing industrial robotics automated assembly cellular and modular material handling computer networking and office automation to name just a few These new technologies are generally capital intensive and do not conform to traditional cost structures The net result is a tremendous change in the way costs should be estimated and economic analyses performed The majority of existing

engineering economy texts still profess application of traditional analysis methods But as was mentioned above it is clear that the basic trend in manufacturing industries is itself changing So it is quite obvious that the practice of traditional economic analysis methods should change too This book is an attempt to address the various issues associated with non traditional methods for evaluation of advanced computer integrated technologies This volume consists of twenty refereed articles which are grouped into five parts Part one Economic Justification Methods consists of six articles In the first paper Soni et al present a new classification for economic justification methods for advanced automated manufacturing systems In the second Henghold and LeClair look at strengths and weaknesses of expert systems in general and more specifically an application aimed at investment justification in advanced technology The third paper by Carrasco and Lee proposes an enhanced economic methodology to improve the needs analysis conceptual design and detailed design activities associated with technology modernization

Advances in Ergonomics In Design, Usability & Special Populations: Part II

Francisco Rebelo, Marcelo Soares, 2022-07-19 Successful interaction with products tools and technologies depends on usable designs and accommodating the needs of potential users without requiring costly training In this context this book is concerned with emerging ergonomics in design concepts theories and applications of human factors knowledge focusing on the discovery design and understanding of human interaction and usability issues with products and systems for their improvement This book will be of special value to a large variety of professionals researchers and students in the broad field of human modeling and performance who are interested in feedback of devices interfaces visual and haptic user centered design and design for special populations particularly the elderly We hope this book is informative but even more that it is thought provoking We hope it inspires leading the reader to contemplate other questions applications and potential solutions in creating good designs for all
