Psychology 02/03 Karen Grover Duffy, 2002 ESSAYS ON VARIOUS PSYCHOLOGY SUBJECTS **Psychology** Karen Duffy, 2000-12 This reader of public press articles explores the science of psychology biological bases of behaviour perceptual processes learning and remembering cognitive processes emotion and motivation development personality processes social processes psychological disorders and psychological treatments Annual Editions is supported by Dushkin Online www dushkin com online a student Web site that provides study support tools and links to related Web sites *Human preferences and risky choices* Petko Kusev, 2012 There are different views on what preferences for risks are and whether they are indicators of stable underlying generic cognitive systems Preferences could be conceived as an attitude towards a set of properties of context memory and affect a gauge of how much uncertainty one is willing to tolerate This Research Topic aims to initiate a discussion on the stability of preferences for risks as research has shown that different decision domains response modes and framing facilitate preference reversals A consistent claim from behavioural decision researchers is that contrary to the assumptions of classical economics preferences are not stable and inherent constructs in individuals but are modified by levels of accessibility in memory context decision complexity and type of psychological processing e g sampling or computational trade offs in processing For example in a sampling based decision making paradigm it is argued that preferences are not essential for making risky decisions The existing theoretical and empirical evidence reveals that human preferences are relative and unstable undermining the predictions of normative theory Recent theoretical accounts in psychology have expanded the debate further by offering evolutionary models of decision making under risk While most of the researcher has explored optimisation goals traditionally assumed in economics evolutionary psychology has promoted adaptation driven processes for risky choices Moreover we have witnessed a renaissance of preferences as affect rather than as a construct with psycho economical properties Although behavioural decision research is still engaged in challenging the foundation of economic theory at present opinions seem less unified as to whether preferences reflect common psychological constructs The Research Topic will focus on human preferences and risky choices Topics include Normative descriptive and experience based decision making Preference reversals Accessibility in memory Context dependence Psychological processing including i probabilities utilities computations and trade offs and ii sampling Affect and Evolutionary accounts Provided by publisher *The Oxford Handbook of Public Choice, Volume 1* Roger D. Congleton, Bernard N. Grofman, Stefan Voigt, 2018-12-07 The Oxford Handbook of Public Choice provides a comprehensive overview of the research in economics political science law and sociology that has generated considerable insight into the politics of democratic and authoritarian systems as well as the influence of different institutional frameworks on incentives and outcomes The result is an improved understanding of public policy public finance industrial organization and macroeconomics as the combination of political and economic analysis shed light on how various interests compete both

within a given rules of the games and at times to change the rules These volumes include analytical surveys syntheses and general overviews of the many subfields of public choice focusing on interesting important and at times contentious issues Throughout the focus is on enhancing understanding how political and economic systems act and interact and how they might be improved Both volumes combine methodological analysis with substantive overviews of key topics This first volume covers voting and elections interest group competition and rent seeking including corruption and various normative approaches to evaluating policies and politics Throughout both volumes important analytical concepts and tools are discussed including their application to substantive topics Readers will gain increased understanding of rational choice and its implications for collective action various explanations of voting including economic and expressive the role of taxation and finance in government dynamics how trust and persuasion influence political outcomes and how revolution coups and authoritarianism can be explained by the same set of analytical tools as enhance understanding of the various forms of democracy

Model Selection and Inference Kenneth P. Burnham, David R. Anderson, 2013-11-11 We wrote this book to introduce graduate students and research workers in various scientific disciplines to the use of information theoretic approaches in the analysis of empirical data In its fully developed form the information theoretic approach allows inference based on more than one model including estimates of unconditional precision in its initial form it is useful in selecting a best model and ranking the remaining models We believe that often the critical issue in data analysis is the selection of a good approximating model that best represents the inference supported by the data an estimated best approximating model In information theory includes the well known Kullback Leibler distance between two models actually probability distributions and this represents a fundamental quantity in science In 1973 Hirotugu Akaike derived an estimator of the relative Kullback Leibler distance based on Fisher's maximized log likelihood His measure now called Akaike's information criterion AIC provided a new paradigm for model selection in the analysis of empirical data His approach with a fundamental link to information theory is relatively simple and easy to use in practice but little taught in statistics classes and far less understood in the applied sciences than should be the case We do not accept the notion that there is a simple true model in the biological sciences

The Neuropsychology of Attention Ronald A. Cohen, 2013-03-09 As you read this you are probably unaware of how your left foot feels in your shoe

Although your brain was receiving sensory input from this foot you were not aware of your foot because you were reading and not attending to it However this discussion led you to move your attention to your left foot and to become aware of it When I was a medical student I saw a patient who was unaware of both the left side of his body and the left side of his environment Unlike people in normal health who when instructed can become aware of the left side of the body this patient could not be made aware of his left arm or the left side of his environment The patient's defect was so profound that despite being hungry he was unaware of food on the left side of his tray and did not recognize that his left arm belonged to him This left sided body and spatial unawareness could not be accounted for by a primary sensory defect Although I knew that this man suffered from a large right hemisphere stroke I did not know the brain mechanisms that accounted for this profound example of unawareness It was not until I had almost completed my neurology training in 1969 that I was able to return to this problem At that time most neuropsychological research was directed at understanding the language disorders associated with brain disease
