Selective Toxicity The Physico Chemical Basis Of Theory:

Selective Toxicity Adrien Albert, 2012-12-06 This book is about selectively toxic agents That is to say it is about those substances that affect certain cells without harming others even when they are close neighbours Toxicity need not be fatal It can be made easily reversible as is the case with general anaesthetics Selective toxicity covers an immense field most of the drugs used for treating illness in man and his economic animals as well as all of the fungicides insecticides and weed killers that are used in agriculture Essentially this book is a discussion of the physical and chemical means which contribute to selectivity and this is the basis of molecular pharmacology _ Selective Toxicity began as a course of lectures that Professor F G Young encouraged me to give in University College London in 1948 and again in 1949 The first edition appeared in 1951 as a very small book because little was then known about the factors that provide selectivity Since those early days the subject has undergone tremendous development At first industry was un receptive to the word toxicity however qualified Yet the market was being supplied with biologically powerful substances of which several had the potential to cause harm This aspect was brought to light by two events of the early 1960s The first of these was the discovery that a sedative thalidomide administered to expectant mothers after what was then considered to be adequate testing had caused permanent deformities in about 10000 children

Selective Toxicity: Physico-Chemical Basis Of Therapy Albert, 2009-07-01 *Science Interrogating Belief* Okpako, David T., 2015-08-06 Traditional African medicine TAM is an ancient healing art In this wide ranging study the author presents an interpretation of the beliefs that constitute the theoretical framework for TAM practices and concludes that the beliefs share many characteristics with modern medical theory but there are significant differences from the latter which reflect the African experience Fever malaria and plant remedies have one common denominator i e the biological phenomenon known as inflammation This is the backbone of the hypothesis put forward in the second half of the book In traditional African societies malaria was successfully cured with plant remedies which suppressed malaria induced inflammation because the people had significant immunity against the disease the causative plasmodium parasite was eliminated by the host s body How indigenous plant remedies can now be used to minimize malaria drug resistance is outlined and an Africa centered approach to malaria control which takes into account the African s intrinsic protective immunity and his extensive knowledge of anti fever plant remedies is advocated Science Interrogating Belief is essentially an outline of the basic principles of TAM It points to ways in which the modern and ancient traditions of medicine can come together for the benefit of mankind

Introduction to Pharmacology, Third Edition Mannfred A. Hollinger, 2002-11-28 The first edition of Introduction to Pharmacology has over recent years become a highly influential text among students wishing to acquire a knowledge of pharmacology without having to refer to the larger more detailed traditional pharmacology volumes This revised and updated second edition contains significant new material to bring the reader up to date with the latest practices and principles in pharmacology Exploring the basic principles in both the therapeutic and toxicological aspects of drug use the book employs contemporary examples of medication supplemented with an increased number of accurate and easy to interpret figures and diagrams Additionally Introduction to Pharmacology presents the important concept of understanding the limitations surrounding the drugs that cure replace physiological inadequacies or treat symptoms and which have led to the system of drug classification The broad scope of the book also encompasses the role of the FDA drugs in sport and the use of animals for drug experimentation A clear and accessible book Introduction to Pharmacology builds on the strengths of the first edition and is an invaluable reference for all students interested in this subject

Arcos, 2013-10-22 Chemical Induction of Cancer Structural Bases and Biological Mechanisms Volume IIIC Natural Metal Fiber and Macromolecular Carcinogens covers structure carcinogenicity relationships of carcinogenic mycotoxins carcinogenic substances generated by plants carcinogenic metals and metalloids and foreign body carcinogens The book discusses the metabolism and mechanism of carcinogenic action physicochemical properties other biological activities principally mutagenicity and teratogenicity modification of carcinogenic activity formation and environmental significance The text also describes the carcinogenic water soluble high polymers and explores the intriguing problems of the carcinogenic effect of osmotic imbalance in tissue

microenvironment as well as of spontaneous malignant transformation occurring in cell cultures in vitro Studies on tumor induction and carcinogenesis modification by nonviral nucleic acids by nucleases proteases histones and by antigenic stimulation as well as by antibodies are also considered The book further tackles tumor released factors as possible modifiers of carcinogenesis The text will prove invaluable to chemists and people involved in cancer research *Green Chemistry Strategies for Drug Discovery* Emily A. Peterson, Julie B. Manley, 2015-06-30 The incorporation of Green Chemistry is a relatively new phenomenon in the drug discovery discipline since the scale that chemists operate on in drug discovery is smaller than those of process and manufacturing chemistry The necessary metrics are more difficult to obtain in drug discovery due to the diversity of reactions conducted However pharmaceutical companies are realizing that incorporation of green chemistry techniques at earlier stages of drug development can speed the development of a drug candidate Edited by experts who have pioneered green chemistry efforts within their own institutions this book provides a practical guide for both academic and industrial labs wanting to know where to start with introducing greener approaches for greatest return on investment The Editors have taken a comprehensive approach to the topic covering the entire drug discovery process from molecule conception through synthesis formulation and toxicology with specific examples and case studies where green chemistry strategies have been implemented Currently employed as well as emerging techniques for performing greener drug discovery chemistry are addressed as well as cutting edge topics like biologics discovery Moreover important surrounding issues such as intellectual property are included This book will serve as a practical guide for both academic and industrial chemists who work across the breadth of the drug discovery discipline Ultimately readers will learn how to incorporate green chemistry strategies into their everyday workflow without slowing down their science

Retrometabolic Drug Design and Targeting Nicholas Bodor, Peter Buchwald, 2012-08-29 Innovative approach to drug design that is more likely to result in an approvable drug product Retrometabolic drug design incorporates two distinct drug design approaches to obtain soft drugs and chemical delivery systems respectively Combining fundamentals with practical step by step examples Retrometabolic Drug Design and Targeting gives readers the tools they need to take full advantage of retrometabolic approaches in order to develop safe and effective targeted drug therapies The authors both pioneers in the fields of soft drugs and retrometabolic drug design offer valuable ideas approaches and solutions to a broad range of challenges in drug design optimization stability side effects and toxicity Retrometabolic Drug Design and Targeting begins with an introductory chapter that explores new drugs and medical progress as well as the challenges of today's drug discovery Next it discusses Basic concepts of the mechanisms of drug action Drug discovery and development processes Retrometabolic drug design Soft drugs Chemical delivery systems Inside the book readers will find examples from different pharmacological areas detailing the rationale for each drug design These examples set forth the relevant pharmacokinetic and pharmacodynamic properties of the new therapeutic agents comparing these properties to those of other compounds used for the same therapeutic
