Selectivities in Lewis Acid Promoted Reactions Dieter Schinzer, 2012-12-06 The ASI workshop on Selectivities in Lewis Acid Promoted Reactions held in the Emmantina Hotel in Athens Glyfada Greece October 27 1988 was held to bring some light into the darkness of Lewis acid induced processes As such the workshop reflects some current trends in organic synthesis where Lewis acids are becoming a powerful tool in many different modern reactions e g Diels Alder reactions Ene reactions Sakurai reactions and in general silicon and tin chemistry The objective of this meeting was to bring together most of the world experts in the field to discuss the major reactions promoted by Lewis acids Organic synthesis will play a major role in this book connected with some fundamental mechanistic work on allylsilane and tin chemistry Both natural product synthesis and unnatural molecules are presented in the chapters The book presents all the 15 invited lectures and the contributions of 15 posters I am confident that the material presented in this book will stimulate the chemistry which has been discussed on our meeting around the world The meeting and the book were only possible through a grant of the NATO Scientific Affairs Division and financial support by the following companies Kali Chemie Hannover W Germany E Merck Darmstadt W Germany Sandoz Basel Switzerland Schering Berlin W Germany

Selectivities in Lewis Acid Promoted Reactions Dieter Schinzer, 1989-09-30 Lewis Acids and Selectivity in Organic Synthesis M. Santelli, J.-M.

Pons, 1995-11-21 Lewis acids provide inexpensive access to elaborated molecules obtained with high selectivities regio stereo and enantioselectivity Lewis Acids and Selectivity in Organic Synthesis is the first book to deal with these new and promising roles of Lewis acids The book begins with general considerations on Lewis acids and a description of Lewis acid carbonyl complexes which are involved in most of the reactions described ene reactions allylsilane and allyltin addition to carbonyl compounds addition of nucleophiles to acetals conjugated addition of allylsilanes and allyltins to unsaturated carbonyl compounds Sakurai reaction and Diels Alder reaction Subsequent chapters examine these issues in detail with special attention given to the way Lewis acids induce diastereo and enantioselectivity The extensive use of schemes approximately 1000 ensures rapid visual uptake of the information Lewis Acids and Selectivity in Organic Synthesis serves as a valuable source of information for all who face the challenge of selectivity in organic synthesis Advances in Asymmetric Synthesis

Domino and Intramolecular Rearrangement Reactions as Advanced Synthetic Methods in Glycoscience Zbigniew J. Witczak, Roman Bielski, 2016-01-14 The book consists of a brief introduction a foreward provided by professor Danishefsky of Columbia University and about 14 16 chapters each written by one or two eminent scholars authors describing their recent research in the area of either domino reactions or intramolecular rearrangements in carbohydrate chemistry Three or four chapters will be reviews The domino cascade tandem reactions are always intramolecular They are usually very fast clean and offer highly complex structures in a one pot process Intramolecular rearrangements offer very similar advantages and often lead to highly complex products as well Although many recently isolated carbohydrates fulfill various sophisticated functions their

structures are often very complex The editors cover the broadest scope of novel methodologies possible All the synthetic and application aspects of domino cascade reactions are explored in this book A second theme that will be covered is intramolecular rearrangement which is also fast stereoselective and often constitutes one or more steps of domino cascade process Selected examples of intramolecular rearrangements are presented Together both processes offer an elegant and convenient approach to the synthesis of many complex molecules which are normally difficult to synthesize via alternative routes It appears that domino and intramolecular rearrangements are ideally suited to synthesize certain specific modified monosaccharides What is particularly important is that both processes are intermolecular and almost always yield products with very well defined stereochemistry This high definition is absolutely crucial when synthesizing advanced modified mono and oligosaccharides The choice of contributors reflects an emphasis on both therapeutic and pharmacological aspects of carbohydrate chemistry

Activating Agents and Protecting Groups Anthony J. Pearson, William R. Roush, 1999-07-09 Recognising the need for a cost effective reference work that deals not only with the most popular reagents in synthesis but also reaches the widest possible audience of practising organic chemists the editors of The Encyclopedia of Reagents for Organic Synthesis EROS have developed a list of the most important and useful reagents employed in the field conveniently presented in four separate volumes The reagents included in this volume reflect the fact that protecting groups and activation procedures are often used in combination There are many instances in the synthesis of natural and unnatural products pharmaceuticals oligosaccharides and oligonucleotides etc where similar tactics must be employed to prevent undesired activation or reaction of functionality Accordingly the most important reagents used to protect amines alcohols carboxyl carbonyl and other reactive functional groups are included in this volume The list of activating agents includes well known reagents that activate functional groups for substitution or elimination reactions as well as less traditional examples e g HMPA used to activate enolates and alkyllithium reagents to increase the nucleophilicity Each article contains all of the information found in EROS as well as expanded related reagents listings and additional references to enable the reader to quickly access a broad range of information that is beyond the scope of the reagent entries themselves This text will prove an invaluable resource

Modern Carbonyl Chemistry Junzo Otera, 2008-11-21 The carbonyl group is undoubtedly one of the most important functional groups in organic chemistry both in its role as reactive center for synthesis or derivatisation and as crucial feature for special structural or physiological properties Vast and profound progress has been made in all aspects modern carbonyl chemistry These achievements are however rather dispersed in the literature and it is often not easy for the researcher obtain a comprehensive overview of a relevant topic Modern Carbonyl Chemistry overcomes this inconvenience by collating the information for appropriate themes In this work internationally renowned experts and leaders in the field have surveyed recent aspects and modern features in carbonyl chemistry such as cascade reactions one

pot syntheses recognition or site differentiation *Stimulating Concepts in Chemistry* Fritz Vögtle, J. Fraser Stoddart, Masakatsu Shibasaki, 2000

Fresh ideas have always been a necessary ingredient for progress in chemistry. Without a continuous supply of stimulating ideas from creative researchers there would be no new insights into the subject. But what are some of the ideas that pervade modern chemistry? The answer to this question is to be found in *Stimulating Concepts in Chemistry*. In a collection of 24 essays a group of leading researchers provides an overview of the most recent developments in their fields. Readers can find out about modern concepts in chemistry such as self assembly, nanochemistry and molecular machines. Moreover many spectacular advances have been achieved from the fusion of chemistry with life and materials science a development which is illustrated by contributions on enzyme mimics, molecular wires and chemical sensors. Further the essayists write about new nanomaterials, efficient methods in synthesis and big biomolecules. Indeed many of the topics that have dominated some of the recent discussions in chemistry. This outstanding text makes use of a special layout to reflect the editors aim of presenting concepts in the form of essays. Thus the book is not merely another source of knowledge but is intended to stimulate readers to develop their own ideas and concepts. This format should help to make the book interesting to a wide range of scientists. Students of chemistry will benefit from the different style of presentation of their subject while researchers in industry and academia will welcome the exciting way in which some of the most challenging concepts in modern chemistry are presented.
