Self And Its Brain Argument For Interactionism:

The Self and Its Brain John C. Eccles, Karl Popper, 2015-11-24 The relation between body and mind is one of the oldest riddles that has puzzled mankind That material and mental events may interact is accepted even by the law our mental capacity to concentrate on the task can be seriously reduced by drugs Physical and chemical processes may act upon the mind and when we are writing a difficult letter our mind acts upon our body and through a chain of physical events upon the mind of the recipient of the letter This is what the authors of this book call the interaction of mental and physical events We know very little about this interaction and according to recent philosophical fashions this is explained by the alleged fact that we have brains but no thoughts The authors of this book stress that they cannot solve the body mind problem but they hope that they have been able to shed new light on it Eccles especially with his theory that the brain is a detector and amplifier a theory that has given rise to important new developments including new and exciting experiments and Popper with his highly controversial theory of World 3 They show that certain fashionable solutions which have been offered fail to understand the seriousness of the problems of the emergence of life or consciousness and of the creativity of our minds In Part I Popper discusses the philosophical issue between dualist or even pluralist interaction on the one side and materialism and parallelism on the other There is also a historical review of these issues In Part II Eccles examines the mind from the neurological standpoint the structure of the brain and its functional performance under normal as well as abnormal circumstances The result is a radical and intriguing hypothesis on the interaction between mental events and detailed neurological occurrences in the cerebral cortex Part III based on twelve recorded conversations reflects the exciting exchange between the authors as they attempt to come to terms with their opinions The Self and Its Brain Karl R. Popper, John C. Eccles, 2012-12-06 The problem of the relation between our bodies and our minds and especially of the link between brain structures and processes on the one hand and mental dispositions and events on the other is an exceedingly difficult one Without pretending to be able to foresee future developments both authors of this book think it improbable that the problem will ever be solved in the sense that we shall really understand this relation We think that no more can be expected than to make a little progress here or there We have written this book in the hope that we have been able to do so We are conscious of the fact that what we have done is very conjectural and very modest We are aware of our fallibility yet we believe in the intrinsic value of every human effort to deepen our understanding of our selves and of the world we live in We believe in humanism in human rationality in human science and in other human achievements however fallible they are We are unimpressed by the recurrent intellectual fashions that belittle science and the other great human achievements An additional motive for writing this book is that we both feel that the debunking of man has gone far enough even too far It is said that we had to learn from Copernicus and Darwin that man's place in the universe is not so exalted or so exclusive as man once thought That may well be *The Self and Its Brain* Karl Raimund Popper, Sir John Carew Eccles, 1983 *The Self*

How the SELF Controls Its BRAIN John C. Eccles, 2012-12-06 In this book the author has collected a number of his important works and added an extensive commentary relating his ideas to those of other prominent names in the consciousness debate The view presented here is that of a convinced dualist who challenges in a lively and humorous way the prevailing materialist doctrines of many recent works Also included is a new attempt to explain mind brain interaction via a quantum process affecting the release of neurotransmitters John Eccles received a knighthood in 1958 and was awarded the Nobel Prize for Medicine Physiology in 1963 He has numerous other awards honouring his major contributions to neurophysiology

The Brain and Its Self Joseph Knoll, 2005-10-14 The main message of this monograph is that the appearance of the mammalian brain with the ability to acquire drives ensured the development of social life and eventually led to the evolution of the human society This most sophisticated form of organized life on earth is still in the trial and error phase of its development It seeks to outgrow the myth directed era of its history and come to its final state the rationally directed human society

An Existentialist Theory of the Human Spirit (Volume 2) Shlomo Giora Shoham, 2020-07-22 This second volume examines how sexual mores and behavior religious dogma and practice and literary creativity and authenticity have influenced and been influenced by the existentialist thought of Kierkegaard Heidegger Sartre Nietzsche Husserl and Buber and the writings of Camus Dostoevsky Beckett Shostakovich Berdyaev and Tillich It compares human and cultural attributes with the attributes of pagan and monotheistic Gods and Buddhist Gnostic Christian and Muslim mysticism with Jewish Kabbalah It explains society's harsh treatment of Vincent van Gogh and Antonin Artaud and analyzes the existentialist approach to existence absurdity human dialogue cosmology and quantum mechanics It will appeal to students and professionals in fields as diverse as philosophy psychology sociology anthropology religion law art drama literature cosmology and physics

Issues in Evolutionary Epistemology Kai Hahlweg, C. A.

Hooker,1989-11-01 This book provides the fullest philosophical examination of theories of evolutionary epistemology now available Here for the first time are found major statements of new theories new applications and many new critical explorations The book is divided into four parts Part I introduces several new approaches to evolutionary epistemology Part II attempts to widen the scope of evolutionary epistemology either by tackling more traditional epistemological issues or by applying evolutionary models to new areas of inquiry such as the evolution of culture or of intentionality Part III critically discusses specific problems in evolutionary epistemology and Part IV deals with the relationship of evolutionary epistemology to the philosophy of mind Because of its intellectual depth and its breadth of coverage *Issues in Evolutionary Epistemology* will be an important text in the field for many years to come Unsnarling the World-Knot David Ray Griffin,2008-03-25 The mind body problem which Schopenhauer called the world knot has been a central problem for philosophy since the time of Descartes Among realists those who accept the reality of the physical world the two dominant approaches have been dualism and materialism but there is a growing consensus that if we are ever to understand how mind and body are related a radically new approach is required David Ray Griffin develops a third form of realism one that resolves the basic problem common to dualism and materialism of the continued acceptance of the Cartesian view of matter In dialogue with various philosophers including Dennett Kim McGinn Nagel Seager Searle and Strawson Griffin shows that materialist physicalism is even more problematic than dualism He proposes instead a panexperientialist physicalism grounded in the process philosophy of Alfred North Whitehead Answering those who have rejected panpsychism as obviously absurd Griffin argues compellingly that panexperientialism by taking experience and spontaneity as fully natural can finally provide a naturalistic account of the emergence of consciousness an account that also does justice to the freedom we all suppose in practice

Identity, Cause, and Mind Sydney Shoemaker,2003 This is an expanded edition of Sydney Shoemaker s seminal collection of his work on interrelated issues in the philosophy of mind and metaphysics It reproduces all of the original papers many of which are now regarded as classics and includes four papers published since the first edition appeared in 1984 Themes include the nature of self knowledge and self reference personal identity persistence over time properties mental states and perceptual experience A number of the papers including *Self Reference and Self Awareness* *Persons and Their Pasts* *Causality and Properties* and *The Inverted Spectrum* have remained at the centre of discussion of their topics Several of the essays in the original collection discuss the ways in which causal considerations enter into the individuation of properties and three of the added essays *Causal and Metaphysical Necessity* *Realization and Mental Causation* and *On What There Are* deal with related themes The neo Lockean view of personal identity presented in *Persons and Their Pasts* is developed with a different emphasis in the added paper *Self and Substance* *Identity Cause and Mind s reappearance* will be warmly welcomed by scholars and students alike **Rethinking the Nature of Fascism** António Costa Pinto,2010-11-17 Many of the foremost experts in the study of European fascism unite to provide a contemporary analysis of the theories and

historiography of fascism Essays discuss the most recent debates on the subject and how changes in the social sciences over the past forty years have impacted on the study of fascism from various perspectives

Information, Knowledge, Evolution and Self Wayne Talbot, 2016-02-04 To understand this subject in relation to the overarching narrative of evolution one must first understand a simple scientific fact one that is generally hidden by imprecise language Material storage devices irrespective of whether they be synthetic or organic do NOT and CANNOT store information The same is to be said for communications of any form through any media I realise that this may be difficult to accept so let me explain Firstly the word information is the noun equivalent of the verb to inform and thus if a communication does not inform you it is not information to you It may be information to somebody else but that is irrelevant in the context of an individual s cognitive processing and knowledge In the context of evolution we must always consider the individual organism for that is where the mechanisms of evolution are said to occur before impacting a wider group This is not a science book in the accepted sense for I am not a scientist The target readership is people like myself well educated in a number of fields enthusiastic amateurs if you like but willing and able to see through the fog of technical language and unsupported assertions to discern the truth for themselves Of course I would welcome readership amongst the scientific community but such people should understand that some of the rigorous norms of scientific publications are absent from this work

The Basic Experience and the Development of the Self Luciano Rispoli, 2008 In today s world children s development is increasingly under threat Basic experiences such as joy tenderness learning how to love well being etc which are crucial for healthy development are often deficient or tainted As a result more and more children show signs of restlessness anxiety and relational problems This study examines the profound functioning at the root of human life and analyses the characteristics of these functional processes the forms they present at different stages of development how they may be supported by adults what dysfunctions can occur and how such imbalances can be cared for or healed The individual as a whole is considered in the light of all its Functions emotional cognitive physical and postural This text provides numerous case histories through which the author illustrates various modalities of prevention cure and therapeutic intervention for children and adolescents This work is based on the theory that only a truly comprehensive outlook can help us understand what really happens during human development and devise truly effective treatments avoiding the error of fragmenting the mind and the body which are seen here as inseparable elements of a unified whole

Letting Go of Logic Jules Goddard, 2024-10-15 Reason can take us only so far At a certain point it ineluctably falls silent Other ways of thinking need to be called upon Reason is good at discerning error identifying evil and calling out nonsense but it is poor at deriving actions from aims theories from observations laws from facts values from experience and judgments from codes of conduct Because logic cannot escape its own premises it remains enclosed in its starting assumptions If everyone in the world obeyed only reason we would have no science art or morality This engaging new book is chock full of ideas and arguments stimulating the reader to take them forward in their own mind Business schools are

moving to a more philosophical curriculum Both professors and students are asking deeper questions than those answered by economics and psychology The book will appeal to business practitioners as well as business school students and teachers

Karl Popper's Science and Philosophy Zuzana Parusniková, David Merritt, 2021-07-19 Of all philosophers of the 20th century few built more bridges between academic disciplines than Karl Popper He contributed to a wide variety of fields in addition to the epistemology and the theory of scientific method for which he is best known This book illustrates and evaluates the impact both substantive and methodological that Popper has had in the natural and mathematical sciences The topics selected include quantum mechanics evolutionary biology cosmology mathematical logic statistics and cognitive science The approach is multidisciplinary opening a dialogue across scientific disciplines and between scientists and philosophers

Language, Socialization and Self-Image Dede Brouwer, Dorian de Haan, 2019-11-05 No detailed description available for Women's Language Socialization and Self Image The Self and its Disorders Shaun Gallagher, 2023-12-03 Shaun Gallagher offers an account of psychopathologies as disorders of the self. The Self and its Disorders develops an interdisciplinary approach to an integrative perspective in psychiatry. In contrast to some integrative approaches that focus on narrow brain-based conceptions or on symptomology, this book takes its bearings from embodied and enactive conceptions of human experience. Gallagher offers an understanding of the self as a pattern of processes that include bodily, experiential, affective, cognitive, intersubjective, narrative, ecological, and normative factors. He provides a philosophical analysis of the notion of self-pattern, then drawing on phenomenological, developmental, clinical, and experimental evidence, he proposes a method to study the effects of psychopathologies on the self-pattern. The book includes specific discussions of schizophrenia, anxiety disorders, depression, borderline personality disorder, and autism among other disorders, as well as the effects of torture and solitary confinement. It also explores a variety of issues that relate to therapeutic approaches, including deep brain stimulation, meditation-based interventions, and the use of artificial intelligence and virtual reality.
