Programming Language, ANSI/MIL-STD 1815 A. ,1988 ANNA A Language for Annotating Ada Programs David C. Luckham,1987-07-15 This reference manual of ANNA is another volume addressed to the ADA community ANNA is a language extension of ADA to include facilities for formally specifying the intended behavior of ADA programs It is designed to meet a perceived need to augment ADA with precise machine processable annotations so that well established formal methods of specification and documentation can be applied to ADA programs The current ANNA design includes annotations of all ADA constructs except tasking Similar extensions for formal specification can be made to other Algol like languages

such as Pascal PL 1 Concurrent Pascal and Modula essentially these extensions would be subsets of ANNA The design of ANNA was undertaken from the beginning with four principal considerations 1 Constructing annotations should be easy for the ADA programmer and should depend as much as possible on notation and concepts of ADA 2 ANNA should possess language features that are widely used in the specification and documentation of programs 3 ANNA should provide a framework within which the various established theories of formally specifying programs may be applied to ADA 4 Annotations should be equally well suited for different possible applications during the life cycle of a program Such applications include not only testing debugging and formal verification of a finished program but also specification of program parts during the earlier stages of requirements analysis and program design *Reference Manual for the Ada Programming Language* ,1982-01-01 Ada 95 Reference Manual. Language and Standard Libraries Tucker S. Taft,1997-06-03 This Ada 95 Reference Manual is essentially identical to the new International Standard ISO IEC 8652 1995 E for the Ada programming language The thorough technical revisions and extensions documented in this manual are built on broad participation from the international Ada community and generous support by leading institutions Over 750 submitted revision requests were evaluated and the resulting enhancements make Ada 95 an outstanding language The flexibility of languages such as C modern features such as object orientation and improved interfacing capabilities have been added to the reliable software engineering capabilities provided and proven for over a decade by the predecessor version Ada 83 furthermore upward compatibility from Ada 83 to Ada 95 has been achieved
