

VALIDATION VS VERIFICATION IN SOFTWARE TESTING

VERIFICATION - A Software System at any Point of Time is Assessed Against Its Requirement.

VALIDATION - Testing a Software After Its Development Process

VERIFICATION

- Performed by humans
- Reviewed by the internal team
- Cost of error will be less
- Done through inspections reviews etc
- Even though it's a low-level exercise it can catch a lot of errors
- Targets software architecture, database design, Design etc.
- Done to check whether software has met its specifications

VALIDATION

- Targets the actual product
- Computer based execution
- Test document will be shared with external teams
- Same but it's a high level complex exercise
- Will help in concluding software's ability to meet customer expectation
- Costs more than that of errors found in verification
- Done through white box testing, gray box testing, black box testing etc.
