*In this paper, I describe a university course designed to facilitate awareness of the language learning process through the examination and adoption of various technology-based language learning tools (TULTs). I examine how three overlapping and complementary learning environments were used to facilitate the course and suggest that this arrangement of learning environments promotes reflection on language learning. The "Computer Assisted Language Learning" course was designed for third year university students majoring in English. The course was not a content-based course, but instead designed for language learners in order to (1) raise students' awareness of some TULTs, and (2) to support students in critically evaluating their own language learning needs and selecting appropriate strategies and tools. Although data were not systematically analyzed, there was evidence that the learning environments provided an effective opportunity for students to reflect on the language learning process. In this article I suggest that there are some benefits of using a combination of learning environments and call for further research investigating levels of reflection using the environments.*

Reflections on Language Noam Chomsky, 1975 Noam Chomsky's work in linguistics has revolutionized our understanding of language In these remarkable nontechnical *Reflections* Chomsky considers the point and purpose of studying language and explores some of the more general intellectual implications that result from the study of linguistics The questions he considers are the classical ones From Plato to the present time philosophers have been baffled and intrigued by how human beings with their limited and personal experience achieve such rich systems of knowledge beliefs and values systems that guide their actions and their interpretations of experience In answer to this fundamental question Chomsky argues that the growth of language is analogous to the development of a bodily organ and is in large measure predetermined by genetic factors Throughout these *Reflections* Chomsky offers incisive analyses of the controversies raging today among psychologists philosophers and linguists over the acquisition of cognitive structures the way language interacts with other mental organs and the way cognitive structures enter into and guide human activity He explores the social and intellectual factors that have led to the dominance of certain ways of thinking and asks why the study of mind and behavior has so often followed a path remote from the general approach of the natural sciences In examining some of the implications of recent work he suggests that the conception of man as totally malleable not only is false but also serves naturally as a support for reactionary social doctrines Publisher
