Fresnel Zone

Antennas Y. Jay Guo, Stephen K. Barton, 2013-04-17 This book is a research monograph on Fresnel zone antennas. It covers various lens and reflector antennas based on the Fresnel zone concept and phase correction techniques. The material presented is mainly drawn from the theoretical and experimental work published and unpublished by the authors. The book is intended to serve engineers, researchers, and students in the fields of antennas, microwave and millimetre wave engineering, radar optics, and telecommunications. The authors hope that readers will find the wealth of unique antenna configurations and the theoretical framework presented inspirational and the large number of equations useful in the analysis and design of Fresnel zone antennas.

Modern Lens Antennas for Communications Engineering John Thornton, Kao-Cheng

Huang, 2013-03-06 The aim of this book is to present the modern design principles and analysis of lens antennas. It gives graduates and RF Microwave professionals the design insights in order to make full use of lens antennas. Why do we want to write a book in lens antennas? Because this topic has not been thoroughly publicized, its importance is underestimated. As antennas play a key role in communication systems, recent development in wireless communications would indeed benefit from the characteristics of lens antennas: low profile and low cost etc. The major advantages of lens antennas are narrow beamwidth, high gain, low sidelobes, and low noise temperature. Their structures can be more compact and weigh less than horn antennas and parabolic antennas. Lens antennas with their quasi-optical characteristics also have low loss, particularly at near millimeter and submillimeter wavelengths where they have particular advantages. This book systematically conducts advanced and up-to-date treatment of lens antennas.
