Reflexive Thesis Wrighting Sociology Of Scientific Knowledge:

The Reflexive Thesis Malcolm Ashmore, 1989-08-02 This unusually innovative book treats reflexivity not as a philosophical conundrum but as a practical issue that arises in the course of scholarly research and argument In order to demonstrate the concrete and consequential nature of reflexivity Malcolm Ashmore concentrates on an area in which reflexive problems are acute the sociology of scientific knowledge At the forefront of recent radical changes in our understanding of science this increasingly influential mode of analysis specializes in rigorous deconstructions of the research practices and textual products of the scientific enterprise Through a series of detailed examinations of the practices and products of the sociology of scientific knowledge Ashmore turns its own claims and findings back onto itself and opens up a whole new era of exploration beyond the common fear of reflexive self destruction

The Bedrock of Opinion G. Sundqvist, 2013-04-17 When did man discover nuclear waste To answer this question we first have to ask if nuclear waste really is something that could be called a scientific discovery such as might deserve a Nobel Prize in physics In early writings within nuclear energy research radioactive waste appears to be a neglected issue a story never told Nuclear waste first seems to appear when a public debate arose about public health risks of nuclear power in the late 1960s and early 70s In nuclear physics consensus was established at an early stage about the understanding of the splitting of uranium nuclei The fission products were identified and their chains of disintegration and radioactivity soon were well established facts among the involved scientists as was an awareness of the risks for example the strong radioactivity of strontium and iodine and the poisonous effects of plutonium However the by products were never either in part or in total called or perceived as waste just as fission by products How and where to dispose of the by products were questions that were never asked by the pioneers of nuclear physics

Reconsidering Social Constructionism Gale Miller, 2017-09-29 With the impact of social interactionist and ethnographic methodology twenty five years ago the research agenda in social problems began to shift its focus giving rise to the Social Constructionism movement The present volume and the related shorter text *Constructionist Controversies* review the substantial contributions made by social constructionist theorists over that period as well as recent debates about the future of the perspective These contributions redefine the purpose and central questions of social problems theory and articulate a research program for analyzing social problems as social constructions A generation of theorists has been trained in the constructionist perspective and has extended it through numerous analyses of diverse aspects of contemporary social life The debates in this volume pose fundamental questions about the major assumptions of the perspective the ways in which it is practiced and the purposes of social problems theory Their point of departure is Ibarra and Kitsuse's essay cutting new theoretical ground in calling for investigating vernacular resources especially rhetorical forms in the social problems process Contributors are forceful proponents both within and outside of the social constructionist community who take a broad array of positions on the current state of social problems theory and on the rhetorical forms that need exploring They also lay down

the general lines for diverse and often competing programs for the future development of the constructionist agenda

Handbook of Science and Technology Studies Sheila Jasanoff, Gerald E Markle, James C Peterson, Trevor Pinch, 2001-11-01 This volume represents the social constructivist turn of the field It is evident that social constructivism made a major impact on the field during the 1970s and 1980s The diverse papers included here highlight the role of ethnography in STS In addition we are exposed to new perspectives of the multicultural and gendered nature of knowledge production Science Technology and Society For the most current comprehensive resource in this rapidly evolving field look no further than the Revised Edition of the Handbook of Science and Technology Studies This masterful volume is the first resource in more than 15 years to define summarize and synthesize this complex multidisciplinary international field Tightly edited with contributions by an internationally recognized team of leading scholars this volume addresses the crucial contemporary issues both traditional and nonconventional social studies political studies and humanistic studies in this changing field Containing theoretical essays extensive literature reviews and detailed case studies this remarkable volume clearly sets the standard for the field It does nothing less than establish itself as the benchmark one that will carry the field well into the next century The long awaited Handbook of Science and Technology Studies sponsored by the Society for Social Studies of Science is a truly substantial work both in size and in the breadth of its many contributions It is a rich and valuable guide to much that is transpiring in the field of Science and Technology Studies In the editors words it is an unconventional but arresting atlas of the field at a particular moment in its history Science Technology Society This book is not only an important resource for practitioners but it also may help to spark the curiosity of those who are outside the field including scientists and engineers themselves and so pull the half seen world of science and technology studies even more fully into the light of day American Scientist The book as a whole is an impressive testimony to the vitality of a burgeoning field New Scientist It reflects the international and interdisciplinary nature of the society An excellent resource Choice **Conflicts in Social Science** Anton Van Harskamp, 2002-11-01 Through detailed case studies the contributors look at conflicts in social science arguing that they must be resolved at the level of the individual discipline rather than at the level of philosophy They explore different ways in which social scientists deal with the tension of being simultaneously party to a conflict and a contributor its settlement The Methods of Bioethics John McMillan, 2018-11-30 This is the first book in bioethics that explains how it is that you actually go about doing good bioethics Bioethics has made a mistake about its methods and this has led not only to too much theorizing but also fragmentation within bioethics The unhelpful disputes between those who think bioethics needs to be more philosophical more sociological more clinical or more empirical continue While each of these claims will have some point they obscure what should be common to all instances of bioethics Moreover they provide another phantom that can lead newcomers to bioethics down blind alleyways stalked by bristling sociologists and philosophers The method common to all bioethics is bringing moral reason to bear upon ethical issues and it is more accurate

and productive to clarify what this involves than to stake out a methodological patch that shows why one discipline is the most important This book develops an account of the nature of bioethics and then explains how a number of methodological spectres have obstructed bioethics becoming what it should In the final part it explains how moral reason can be brought to bear upon practical issues via an empirical Socratic approach

Representing Reality Jonathan Potter, 1996-08-28 This is an admirable book which can be recommended to students with confidence and is likely also to become an indispensable source of reference for those researching fact construction Discourse Society How is reality manufactured The idea of social construction has become a commonplace of much social research yet precisely what is constructed and how and even what constructionism means is often unclear or taken for granted In this major work Jonathan Potter offers a fascinating tour of the central themes raised by these questions Representing Reality overviews the different traditions in constructionist thought Points are illustrated throughout with

Knowledge, Ideology & Discourse Tim Dant, 2013-12-19 This student textbook originally published in 1991 tackles the traditional problems of the sociology of knowledge from a new perspective Drawing on recent developments in social theory Tim Dant explores crucial questions such as the roles of power and knowledge the status of rational knowledge and the empirical analysis of knowledge He

argues that from a sociological perspective knowledge ideology and discourse are different aspects of the same phenomenon and reasserts the central thesis of the sociology that knowledge is socially determined *Social Knowledge in the Making* Charles Camic, Neil Gross, Michèle Lamont, 2012-07-24 Over the past quarter century researchers have successfully explored the inner workings of the physical and biological sciences using a variety of social and historical lenses Inspired by these advances the contributors to *Social Knowledge in the Making* turn their attention to the social sciences broadly construed The result is the first comprehensive effort to study and understand the day to day activities involved in the creation of social scientific and related forms of knowledge about the social world The essays collected here tackle a range of previously unexplored questions about the practices involved in the production assessment and use of diverse forms of social knowledge A stellar cast of multidisciplinary scholars addresses topics such as the changing practices of historical research anthropological data collection library usage peer review and institutional review boards Turning to the world beyond the academy other essays focus on global banks survey research organizations and national security and economic policy makers *Social Knowledge in the Making* is a landmark volume for a new field of inquiry and the bold new research agenda it proposes will be welcomed in the social science the humanities and a broad range of nonacademic settings Science after the Practice Turn in the Philosophy, History, and Social Studies of Science Léna Soler, Sjoerd Zwart, Michael Lynch, Vincent Israel-Jost, 2014-03-21 In the 1980s philosophical historical and social studies of science underwent a change which later evolved into a turn to practice Analysts of science were asked to pay attention to scientific practices in meticulous detail and along multiple dimensions including the material social and psychological Following this turn the interest in scientific practices continued to increase and had an indelible influence in the various fields of science studies No doubt the practice turn changed our conceptions and approaches of science but what did it really teach us What does it mean to study scientific practices What are the general lessons implications and new challenges This volume explores questions about the practice turn using both case studies and theoretical analysis The case studies examine empirical and mathematical sciences including the engineering sciences The volume promotes interactions between acknowledged experts from different often thought of as conflicting orientations It presents contributions in conjunction with critical commentaries that put the theses and assumptions of the former in perspective Overall the book offers a unique and diverse range of perspectives on the meanings methods lessons and challenges associated with the practice turn **Transmissions** Kat Jungnickel, 2020-04-07 Researchers rethink tactics for inventing and disseminating research examining the use of such unconventional forms as poetry performance catalogs interactive machines costume and digital platforms Transmission is the research moment when invention meets dissemination the tactical combination of making how theory methods and data shape research and communicating how research is shown and shared In this book researchers from a range of disciplines examine tactics for the transmission of research exploring such unconventional forms as poetry performance catalogs interactive machines

costume and digital platforms Focusing on transmissions draws attention to a critical part of the research process commonly overlooked and undervalued Too often the results of radically experimental research methodologies are pressed into conventional formats The contributors to Transmissions rethink tactics for making and communicating research as integral to the kind of projects they do pushing against disciplinary edges with unexpected and creative combinations and collaborations Each chapter focuses on a different tactic of transmission One contributor merges literary styles of the empirical and poetic another uses an angle grinder to construct machines of enquiry One project invites readers to participate in an exchange about value another provides a series of catalog cards to materialize ordering systems of knowledge All the contributors share a commitment to uniting the what with the how firmly situating their transmissions in their research and in each unique chapter of this book Contributors Nerea Calvillo Rebecca Coleman Larissa Hjorth Janis Jefferies Kat Jungnickel Sarah Kember Max Liboiron Kristina Lindström Alexandra Lippman Bonnie Mak Julien McHardy Julia Pollack Ingrid Richardson Sarah St. Hill Laura Watts

Social Constructivism and the Philosophy of Science André Kukla, 2013-01-11 Social constructionists maintain that we invent the properties of the world rather than discover them Is reality constructed by our own activity Do we collectively invent the world rather than discover it André Kukla presents a comprehensive discussion of the philosophical issues that arise out of this debate analysing the various strengths and weaknesses of a range of constructivist arguments and arguing that current philosophical objections to constructivism are inconclusive However Kukla offers and develops new objections to constructivism distinguishing between the social causes of scientific beliefs and the view that all ascertainable facts are constructed

Expert Ignorance Deval Desai, 2023-06-22 Today a transnational constellation of rule of law experts advise on good legal systems to countries in the Global South Yet these experts often claim that the rule of law is nearly impossible to define and they frequently point to the limits of their own expertise In this innovative book Deval Desai identifies this form of expertise as expert ignorance Adopting an interdisciplinary approach Desai draws on insights from legal theory sociology development studies and performance studies to explore how this paradoxical form of expertise works in practice With a range of illustrative cases that span both global and local perspectives this book considers the impact of expert ignorance on the rule of law and on expert governance more broadly Contributing to the study of transnational law governance and expertise Desai demonstrates the enduring power of proclaiming what one does not know This title is available as Open Access on Cambridge Core

Social Imaginary and the Metaphysical Discourse Christoforos Bouzanis, 2023-05-05 This book departs from approaches to truth in social science and ideas in philosophy that connect truth to the ability of language to fulfil certain real world conditions of objectivity Pointing to an extra linguistic level in our cognition at which scientific creativity occurs it highlights the manner in which epistemic communities share work on and modify not only the world imaginaries that they endorse but also those world views that they reject or which partially overlap with their own Through the concept of the social imaginary the author explores the theoretical interrelations among

various metaphysical world imageries by which we organise our scientific understanding of the world and our expectations of experience thus shedding light on the manner in which social ontology can inform our practices of sharing belief A study at the intersection of metaphysics and social theory The Fundamental Predicament of Contemporary Philosophy and the Social Sciences will appeal to scholars of sociology and philosophy with interests in questions of ontology and epistemology

Social Science Gerard Delanty,1997 It is argued that the conception of social science emerging today is one that involves a synthesis of radical constructivism and critical realism The crucial challenge facing social science is a question of its public role growing reflexivity in society has implications for the social production of knowledge and is bringing into question the separation of expert systems from other forms of knowledge **Changing Life** Peter J. Taylor,Saul E. Halfon,Paul N.

Edwards,1997 In laboratories all over the world life even the idea of life is changing And with these changes whether they result in square tomatoes or cyborgs come transformations in our social order sometimes welcome sometimes troubling Changing Life offers a close look at how the mutable forms and concepts of life link the processes of science to those of information finance and commodities These essays about planetary management and genome sequencing ecologies and cyborgs address actual and imagined transformations at the center and at the margins of transnational relations during the post Cold War era and in times to come **Autoaffection** Patricia Ticineto Clough,2000 **Science and the Quest for**

Reality Alfred I. Tauber,2016-07-27 Science and the Quest for Reality is an interdisciplinary anthology that situates contemporary science within its complex philosophical historical and sociological contexts The anthology is divided between firstly characterizing science as an intellectual activity and secondly defining its social role The philosophical and historical vicissitudes of science s truth claims has raised profound questions concerning the role of science in society beyond its technological innovations The deeper philosophical issues thus complement the critical inquiry concerning the broader social and ethical influence of contemporary science In the tradition of the Main Trends of the Modern World series this volume includes both classical and contemporary works on the subject
