

SEMANTIC MEMORY

Semantic memory refers to the long-term storage of facts and is a form of declarative memory.

DEFINITION

"Semantic memory is our storehouse of more-or-less permanent knowledge, such as the meanings of words in a language (e.g., the meaning of "parasol") and the huge collection of facts about the world (e.g., there are 196 countries in the world, and 206 bones in your body)." (Kearns & Lee, 2015, p. 155)

EXAMPLES

- Memorizing the names and birthdates of all of your relatives, including grandparents, aunts and uncles, plus cousins.
- Responding to your competition's remarks during a debate by citing key facts from research.
- Labeling each part of the brain involved in reading comprehension.

Retrieval From Semantic Memory:

Retrieval from Semantic Memory W. Noordman-Vonk, 2013-03-07 The area of concern to Dr Wietske Noordman Vonk has been variously seen as an aspect of long term memory F I secondary memory F 2 memory without record F 3 and semantic memory F 4J the latter term being the one preferred by Dr Noordman Vonk herself This proliferation of terminology is not an entirely trivial matter for although the expressions clearly overlap in range they do draw attention to different features of the phenomena under consideration The work reported here is concerned with the form of representation and manipulation of our knowledge that for example a dog is an animal or that mothers and daughters are parents and children To put it more generally the experiments attempt to elucidate the psychological processes involved in the semantics of class inclusion and most importantly to extend the explanatory principles there invoked to a new domain that of kinship relations Clearly the connections between ant and insect or flower and plant have been known to us as adults for some considerable period of time in the absence of brain injury or degeneration we are unlikely to forget that fathers and sons are kin of the same sex We may therefore pretheoretically distinguish between retrieval of such knowledge and retrieval of a rapidly fading sequence of random numbers that we are asked to recall after a single presentation It is in this sense that the current work is concerned with long term and not short term memory

The Representation of Meaning in Memory (PLE: Memory) Walter Kintsch, 2014-05-23 Originally published in 1974 this volume presents empirical and theoretical investigations of the role of meaning in psychological processes A theory is proposed for the representation of the meaning of texts employing ordered lists of propositions The author explores the adequacy of this representation with respect to the demands made upon such formulations by logicians and linguists A sufficiently large number of problems are encompassed by the propositional theory to justify its use in psychological research into memory and language comprehension A number of different experiments are reported on a wide variety of topics and these test central portions of this theory and any that purports to deal with how humans represent meaning Among the topics discussed are the role of lexical decomposition in comprehension and memory propositions as the units of recall and the effects of the number of propositions in a text base upon reading rate and recall New problems are explored such as inferential processes during reading differences in levels of memory for text and retrieval speed for textual information On the other hand a study of retrieval from semantic memory focusses on a problem of much current research The final review chapter relates the present work to other current research in the area at the time
