Psychopathology Johnny L. Matson, 2013-03-07 The treatment of psychopathology in children has been a centerpiece of the overall field of problem behaviors in children. Therefore, a considerable number of data have been accumulated, particularly in recent years. These efforts have expanded at such a rate as to result in the publication of several new journals such as the *Journal of Clinical Child Psychology and Education* and *Treatment of Children*. Similarly, many standard general clinical journals have begun to devote more attention to children. Despite these efforts, few books have emerged that are devoted directly and specifically to treatment in childhood psychopathology. This volume's scope is broad in that it reviews not only behavior therapy but also the rapidly expanding efforts in psychopathology and traditional psychotherapy and at an advanced level. It is designed to provide an in-depth scholarly review of the empirical evidence, including an overview and analysis of the available techniques, their effectiveness, and the limitations and complications arising from the use of these treatment methods with the full range of psychopathology displayed by children. Many nationally and internationally recognized experts have agreed to contribute chapters to this book, and we hope that what has emerged is an up-to-date and authoritative volume.

The Complexity of Psychiatric Care, from Pregnancy to Adolescence: Beyond the Endogenous-Exogenous Dichotomy Olivier Putois, Bernard Golse, Veronique Delvenne, Miri Keren, 2024-06-26 Child and adolescent psychiatry hosts a range of diverse epistemological positions regarding the origin of psychical suffering from fully endogenous e.g. genetic to mostly exogenous e.g. family trauma etc The complexity of clinical situations generally precludes such epistemologies to require exclusive therapeutic strategies psychodynamic psychotherapy can be fruitful in the context of monogenic genetic illnesses at the family or individual level while pharmacology can be a necessary tool in a variety of difficult relational contexts or personality issues e.g. in adolescence Thus nowadays the most promising therapeutic perspectives in child and adolescent psychiatry attempt to do justice to the polyfactorial complexity of mental suffering notably by refining their psychopathologies by drawing on e.g. biopsychosocial or epigenetic models even more so as prevention policies ask for longitudinal studies to help with the early detection of potential future troubles
