**Astronomy from Space** James Cornell, Paul Gorenstein, 1983 Since the Space Age began a quarter century ago astronomers have been able to reach out and often touch celestial bodies that formerly could only be dimly viewed from afar Probes have flown by or landed on many of the planets Astronauts have made direct observations from Earth orbit and on the Moon Most important a host of satellites in Earth orbit have recorded the emissions of X ray infrared and ultraviolet radiation from distant sources normally invisible beneath the atmosphere And when the Space Telescope goes aloft man's vision of the cosmos will be extended further still The essays in this book describe the results of twenty five years of space observation summarize what has been learned so far and speculate on the possibilities that are now within grasp Leo Goldberg provides a point of departure by describing what astronomy was like when it was limited to peering at the night sky through Earthbound telescopes Goldberg also expresses the hopes astronomers had for discovery in the anticipated Age of Space The chapters that follow reveal what has been discovered about the geological features of the inner planets James W Head III the Moon John A Wood the giant planets as seen during the close encounters of the Voyagers Bradford A Smith and the Sun Randolph H Levine The next chapters document the first ventures into deep space and describe the understanding of a previously invisible universe revealed by ultraviolet sources Andrea K Dupree and X ray sources within the Milky Way Jonathan E Grindlay and beyond Paul Gorenstein George B Field who chaired the National Academy of Science committee charged with developing priorities for U S astronomical research in the 1980s discusses the future of space astronomy An epilogue by Ursula B Marvin describes a planet body that until recently had never been seen from the vantage point of space the Earth itself The editors and most of the contributors are affiliated with the Harvard Smithsonian Center for Astrophysics James Cornell also edited with Alan P Lightman *Revealing the Universe Prediction and Proof in Astronomy* MIT Press paperback

### **Einstein Relatively Simple: Our Universe Revealed In**

**Everyday Language** Ira Mark Egdall, 2014-01-06 Outstanding Academic Title for 2014 by CHOICE Einstein Relatively Simple brings together for the first time an exceptionally clear explanation of both special and general relativity. It is for people who always wanted to understand Einstein's ideas but never thought they could. Told with humor, enthusiasm, and rare clarity, this entertaining book reveals how a former high school drop-out revolutionized our understanding of space and time. From  $E=mc^2$  and everyday time travel to black holes and the big bang, Einstein Relatively Simple takes us all, regardless of our scientific backgrounds, on a mind-boggling journey through the depths of Einstein's universe. Along the way, we track Einstein through the perils and triumphs of his life, follow his thinking, his logic, and his insights, and chronicle the audacity, imagination, and sheer genius of the man recognized as the greatest scientist of the modern era. In Part I on special relativity, we learn how time slows and space shrinks with motion and how mass and energy are equivalent. Part II on general relativity reveals a cosmos where black holes trap light and stop time, where wormholes form gravitational time machines, where space itself is continually expanding, and where some 13.7 billion years ago, our universe was born in the ultimate cosmic event: the Big Bang.
