Biofouling and Biocorrosion in Industrial Water Systems Hans-Curt Flemming,Gill G. Geesey,2012-12-06 Microbial growth and contamination Biofouling in water systems represents a significant threat to the quality of waters produced for the microelectronic pharmaceutical petroleum paper food and other manufacturing industries Biofouling can lead to biologically induced corrosion Biocorrosion which can cause severe damage to the equipment Both biofouling and biocorrosion are frequently not recognized in time underestimated or linked with the wrong causes The book represents a new approach by introducing biofilm properties and dynamics as basic principles of biofouling and biocorrosion thus providing a better understanding and the means of fighting the undesired effects of biofilms The most important features are Case histories of biofouling in water treatment Detection and monitoring of biofouling Reverse osmosis membrane biofouling Biocide efficacy and biofouling control Plant design considerations for preventing biofouling Case histories of biocorrosion Detection monitoring control and prevention of biocorrosion Fundamentals of biofouling and biocorrosion mechanisms

Proceedings of the Symposium on Water Purification by Photocatalytic, Photoelectrochemical, and Electrochemical Processes Timothy L. Rose,1994 **Ion Exchange Advances** M.J. Slater,2012-12-06 This volume contains the papers presented at the Sixth International Ion Exchange Conference organised by the SCI and held at Churchill College Cambridge UK in July 1992 As on previous occasions most recently in 1988 the organising committee did not engage plenary speakers but decided to solicit state of the art contributions from the ion exchange community This book contains the refereed papers presented at the meeting whether in poster or oral form Extra papers were presented at the meeting as posters because they were not available in time for refereeing purposes The subject matter of the meeting and therefore the contents of the book is subdivided into seven separate topic areas as follows resin developments water treatment fundamentals biotechnology food and pharmaceuticals environmental and pollution control membranes inorganic materials and nuclear and hydrometallurgy The coverage of the meeting is similar to 1988 although there are fewer subdivisions on this occasion The more restricted coverage this time reflects the smaller number of papers offered by authors This is probably due to the world wide industrial recession which has affected commercial development and exploitation of the technology and restricts the ability of practitioners and academics to contribute to and attend international meetings Nevertheless the advances in biotechnology growing concern about the environment and the need for novel separation processes have provided sufficient impetus to stimulate a sufficient number of workers in the field **Membrane Technology and Applications** Richard W. Baker,2012-10-01 the best handbook on membrane technology which is currently on the market Membrane News on the previous edition Building on the success of the previous edition Membrane

Technology and Applications Third Edition provides a comprehensive overview of separation membranes their manufacture and their applications Beginning with a series of general chapters on membrane preparation transport theory and concentration polarization the book then surveys several major areas of membrane application in separate chapters Written in a readily accessible style each chapter covers its membrane subject thoroughly from historical and theoretical backgrounds through to current and potential applications Topics include reverse osmosis ultrafiltration pervaporation microfiltration gas separation and coupled and facilitated transport chapters on electrodialysis and medical applications round out the coverage NEW TO THE THIRD EDITION New sections on the use of membranes in the chlor alkali industry membrane distillation pressure retarded osmosis and constant flux variable pressure ultrafiltration Zeolite and ceramic membranes submerged membrane modules and fuel cell membranes Substantially enhanced chapters on ultrafiltration pervaporation and membrane contactors Updates to every chapter to reflect the developments in the field
