A New Environmental Ethics Holmes Rolston III, 2012-04-23 No one looking ahead at the middle of the last century could have foreseen the extent and the importance of the ensuing environmental crises Now more than a decade into the next century no one can ignore it *A New Environmental Ethics the Next Millennium for Life on Earth* offers clear powerful and oftentimes moving thoughts from one of the first and most respected philosophers to write on the environment Rolston an early and leading pioneer in studying the moral relationship between humans and the earth surveys the full spectrum of approaches in the field of environmental ethics This book however is not simply a judicious overview Instead it offers critical assessments of contemporary academic accounts and draws on a lifetime of research and experience to suggest an outlook for the future As a result this focused forward looking analysis will be a necessary complement to any balanced textbook or anthology in environmental ethics and will teach its readers to be responsible global citizens and residents of their landscape helping ensure that the future we have will be the one we wish for

The Natural and the Artefactual Keekok Lee, 1999-01-01 In this book philosopher Keekok Lee challenges one of the central assumptions of contemporary environmentalism that if we could reduce or eliminate pollution we could save the planet without unduly disrupting our modern industrialized societies Lee argues instead that the process of modernization with its attendant emphasis on technological innovation has fundamentally transformed nature into just another manmade artefact Ultimately what needs to be determined is if nature has value above and beyond human considerations whether aesthetic spiritual or biological This provocative book attempts to reconfigure environmental ethics positing the existence of two separate ontological categories the natural and the artefactual Natural entities be they organisms or inert matter are morally considerable because they possess the ontological value of independence whereas artefacts are created by humans expressly to serve their own interests and ends

Vitalizing Nature in the Enlightenment Peter H. Reill, 2005-06-06 This far reaching study redraws the intellectual map of the Enlightenment and boldly reassesses the legacy of that highly influential period for us today Peter Hanns Reill argues that in

the middle of the eighteenth century a major shift occurred in the way Enlightenment thinkers conceived of nature that caused many of them to reject the prevailing doctrine of mechanism and turn to a vitalistic model to account for phenomena in natural history the life sciences and chemistry As he traces the ramifications of this new way of thinking through time and across disciplines Reill provocatively complicates our understanding of the way key Enlightenment thinkers viewed nature His sophisticated analysis ultimately questions postmodern narratives that have assumed a monolithic Enlightenment characterized by the dominance of instrumental reason that has led to many of the disasters of modern life

Food Ethics
Ben Mephram, 2012-10-02 None of us can avoid being interested in food Our very existence depends on the supply of safe nutritious foods It is then hardly surprising that food has become the focus of a wide range of ethical concerns Is the food we buy safe Is it produced by means which respect the welfare of animals and sustain the land Are modern biotechnologies employed in food production immoral This book addresses such issues by applying ethical principles to many areas of current concern The contributors provide original and thought provoking treatments of a number of highly topical issues from global hunger and its ethical implications to the cultural habits affecting consumption This interdisciplinary study will prove to be essential reading for all those concerned with food as professionals students or consumers
