*Plenary Papers of the 1999 Conference on Criminal Justice Research and Evaluation--enhancing Policy and Practice Through Research: Preventing school violence*, 1999 Foreword This

year's annual conference on criminal justice research and evaluation is a milestone of sorts. Some 30 years ago the President's Commission on Law Enforcement and Administration of Justice noted with alacrity that the revolution of scientific discovery had largely bypassed the problems of crime and crime control. The method of objective analysis that had been used with stunning success to raise living standards, help people live healthier lives, and explore the heavens had unaccountably failed to be applied to one of the era's most pressing problems. To the great good fortune of succeeding generations, the Commission in its wisdom recommended creation of a Federal research agency dedicated to the scientific study of crime and criminal justice with the aim of informing and aiding the work of practitioners. The National Institute of Justice, the agency established by Congress to carry out that mission, has for the past three decades been seeing the returns on that investment multiply. Criminology has become a respected field of scholarly inquiry and we have built an impressive body of knowledge that has helped us better understand criminal behavior and the justice system. More important, the results of scholarly inquiries have been and are being applied to the day-to-day operations of law enforcement, corrections, the courts, and other elements of the justice system. In the conference which revisited the Commission with the theme "Enhancing Policy and Practice Through Research," we saw how the investment continues to yield returns. The plenary sessions, in particular, emphasized praxis research put to the service of real-world situations. Because of the distinctiveness of this year's plenary panels, we decided to publish them in three separate volumes: viewing crime from the street level, addressing school violence through research-based policy developed through an interdisciplinary approach, and understanding the involvement of women and girls in the criminal justice system. Sudhir Venkatesh and Richard Curtis bring the ethnographer's perspective to the analysis of street crime, analyzing respectively the financial activity of gangs and recent trends in drug dealing. Their method, distinct from that of conventional quantitative social science, calls for intensive observation over long periods and involves the quest for what is a) specific to single places and times and what is generalizable. The close-up, street-level observations of study subjects offer singular insights for practitioners who deal with these individuals as offenders. In this panel, we also benefited from the perspective of Charles Ramsey, Chief of the Metropolitan Police Department, Washington, D.C. His indication that drug trafficking and gang crime persist in his jurisdiction, despite the overall drop in crime, offers proof of the ethnographer's caution against facile generalization. This year marks the first time the program offices of the Office of Justice Programs (OJP), the Corrections Program Office, the Drug Courts Program Office, the Executive Office for Weed and Seed, and the Violence Against Women Office have joined the OJP bureaus as conference sponsors. Because these offices work so closely with the practitioner community, I feel their sponsorship is an added expression of their commitment to research. I think they would endorse Chief Ramsey's succinct assessment of the role of research in affecting crime levels in the years to come: as bringing to light findings useful for fashioning real-world solutions. The best way to predict the future, the Chief said, is to help create it. Those who wish to read more can find abstracts of the conference sessions on the World Wide Web at <http://www.ojp.gov>.

Whoever coined the adage an ounce of prevention is worth a pound of cure could not have known how important this adage would become. The challenge of altering the health trajectories of poor lifestyle decisions for such behaviors as smoking, drinking, and using illicit drugs, violence, dropping out of school, engagement in risky sexual behaviors, and crime through prevention research has led to a new discipline: prevention science. *Defining Prevention Science* covers this emerging field of science: its goals, its conceptual and theoretical foundations, its methods, and especially its utility. Not content to simply differentiate the field from its close allies—epidemiology, psychology, neuroscience, sociology, economics—the text explains how these many disciplines enhance each other at both research and intervention levels and how prevention science draws on these biological, behavioral, and social sciences to create an innovative knowledge base that has provided cost-effective, evidence-based prevention interventions and policies. To this end, familiar developmental benchmarks are recast in prevention health promotion context: from the crucial importance of adolescence in encountering and deterring high-risk behaviors to the risks and resiliencies of single mother families. An international group of contributors offers current findings, up-to-date methods for effective evidence-based interventions, and improvements in research technologies in these key areas: Physical, cognitive, and emotional vulnerability across the life course; The roles of developmental influences in prevention; Intervention development, delivery, and implementation; Bringing the intervention approach to research design; New directions in analytic methods; Cost analysis and policy implications. *Advances in Prevention Science: Defining Prevention Science* aims to inspire further refinements in the field and encourage communication among researchers in its own and related disciplines, including public health, epidemiology, psychology, and criminology. This is the first volume in the series *Advances in Prevention Science* that provides the framework for other volumes that will focus on such issues as *Prevention Science in School Settings*, *Complex Relationships and Processes Preventing Crime and Violence*, and *The Prevention of Substance Use*.      **Brookings Papers on Education Policy: 2000** Diane Ravitch, 2010-12-01

In this third annual issue of the series, prominent economists, educators, and other social scientists analyze the importance of standards in education and review some of the major controversies that have arisen in the past decade on the problems of shaping and implementing standards. Edited by Diane Ravitch, one of the nation's foremost education authorities, *Brookings Papers on Education Policy* is an indispensable guide to understanding education trends and emerging issues. The year 2000 issue is scheduled to include essays by Gary Chapman of the University of Texas; George Farkas and L. Shane Hall of the University of Texas at Dallas; Paul Hill of the University of Washington; Christine Rossell of Boston University; Robert Schwartz and Marian Robinson of ACHIEVE and Harvard Graduate School of Education; Larry Sherman of the University of Maryland; and Maris Vinovskis of the University of Michigan.

**Weighing the Options** Committee to Develop Criteria for Evaluating the Outcomes of Approaches to Prevent and Treat Obesity, Institute of Medicine, 1995-03-15 Nearly one out of every three adults in America is obese and tens of millions of people in the United States are dieting at any one time This has resulted in a weight loss industry worth billions of dollars a year and growing What are the long term results of weight loss programs How can people sort through the many programs available and select one that is right for them Weighing the Options strives to answer these questions Despite widespread public concern about weight few studies have examined the long term results of weight loss programs One reason that evaluating obesity management is difficult is that no other treatment depends so much on an individual's own initiative and state of mind Now a distinguished group of experts assembled by the Institute of Medicine addresses this compelling issue Weighing the Options presents criteria for evaluating treatment programs for obesity and explores what these criteria mean to health care providers program designers researchers and even overweight people seeking help In presenting its criteria the authors offer a wealth of information about weight loss how obesity is on the rise what types of weight loss programs are available how to define obesity how well we maintain weight loss and what approaches and practices appear to be most successful Information about weight loss programs their clients staff qualifications services and success rates necessary to make wise program choices is discussed in detail The book examines how client demographics and characteristics including health status knowledge of weight loss issues and attitude toward weight and body image affect which programs clients choose how successful they are likely to be with their choices and what this means for outcome measurement Short and long term safety consequences of weight loss are discussed as well as clinical assessment of individual patients The authors document the health risks of being overweight summarizing data indicating that even a small

weight loss reduces the risk of disease and depression and increases self esteem At the same time weight loss has been associated with some poor outcomes and the book discusses the implications for program evaluation Prevention can be even more important than treatment In Weighing the Options programs for population groups efforts targeted to specific groups at high risk for obesity and prevention of further weight gain in obese individuals get special attention This book provides detailed guidance on how the weight loss industry can improve its programs to help people be more successful at long term weight loss And it provides consumers with tips on selecting a program that will improve their chances of permanently losing excess weight     **Encyclopedia of Social Work** ,1965
