China V Brian Morton, 2000-12-01 From 6 25 April 1998 the Tenth International Workshop on the Marine Flora and Fauna of Hong Kong and South China was convened at the Swire Institute of Marine Science of the University of Hong Kong Thirteen scientists from six countries and twenty two scientists and students from Hong Kong investigated aspects of the marine flora and fauna of the Cape d Aguilar Marine Reserve and the southeastern waters of Hong Kong This was to obtain more information about the newly established reserve the only one in Hong Kong and the changes that had taken place on the seabed in the southern waters since they were dredged between 1992 1995 respectively and in the latter case to see if there had been any subsequent benthic recovery The Proceedings of the workshop contains thirty six original research papers dealing with aspects of the taxonomy and anatomy behaviour and physiology of marine life in Hong Kong and Southern China Papers also explore aspects of Hong Kong s marine parks and reserves including the pollution of Hong Kong s marine life with particular reference to the Cape d Aguilar Marine Reserve established only in 1996 and the fauna of its territorial southern waters The Workshop was sponsored by the University of Hong Kong the Croucher Foundation and the K C Wong Foundation so as to bring eminent overseas scientists to Hong Kong to work with their local colleagues and students The success of the workshop concept is self evident in the contents and scope of these proceedings This was the eighth workshop convened in Hong Kong since 1977 and these proceedings have become the single most important body of information on the long term changes that have taken place in its marine environment over an extended time frame The volumes are also the largest regional repository of information on the marine life of the territorial waters of Hong Kong and the northern rim of the South China Sea For those with any interest in Hong Kong s marine environment therefore this proceedings and its predecessors are essential reading *Resource Inventory of Marine and Estuarine Fishes of the West Coast and Alaska*

, 2005 **Groupers of the World** Matthew T. Craig, Yvonne J. Sadovy de Mitcheson, Phillip C. Heemstra, 2024-07-31 This is the sixteenth issue in the FAO series of worldwide annotated and illustrated catalogues of major groups of organisms that enter marine fisheries It contains the 159 species in 15 genera known from the serranid subfamily Epinephelinae including one species new to science There is an introductory section with general remarks on habitat and fisheries of the family a glossary of technical terms an illustrated key to each genus and all species and a detailed account for all species Species accounts include an illustration of each species scientific and vernacular names and information on habitat biology fisheries size relevant literature and distribution *The Sea Shore Ecology of Hong Kong* Brian Morton, John Morton, 1983-04-01 Hong Kong is strategically located between the temperate Japonic and the great tropical Indo West Pacific zoogeographic

provinces Influenced by the currents of the South China Sea and the huge outflow of fresh water from the Pearl River Hong Kong's marine flora and fauna are extremely diverse Temperate species may appear if only briefly during the cooler winter months Conversely air and water temperatures remain high enough for a strong tropical component Hong Kong is comparatively rich in mangrove stands and reef corals are well developed subtidally There is a strong north west to south east salinity gradient further enhancing diversity Geologically the Hong Kong shore is a drowned coastline deeply incised and with former mountain peaks represented by numerous off shore islands This book reviews the factors creating and maintaining Hong Kong's living shore and describes the wide range of plants and animals found within the intertidal boundaries of the shore A full range from exposure to shelter is to be found from communities of the sheer rock faces beaten by the storm waves of the South China Sea to the denizens of mudflats in high shelter at the heads of harbours and inlets For the first time the occupants of these various shores are illustrated and described both as individual species and as components of a rich mosaic of life The factors of pollution and development that are destroying the diversity of the rich complex of shores are described
